Connect SCSI peripherals to your USB 2.0 or 1.1 port in seconds

The Adaptec® USB2Xchange USB2.0-to-SCSI adapter makes it fast and easy to connect your SCSI devices with the newest computer systems – desktop PCs and notebook PCs. As the leader in SCSI technology, Adaptec provides you with a complete solution you can trust. USB2Xchange's sleek design and excellent software provide you with the best connectivity solution between these leading interfaces – USB and SCSI.

SCSI reliability today and tomorrow

USB2Xchange provides connectivity for virtually all of your SCSI devices so you can continue to rely on the SCSI devices you already own and trust. It also gives you the freedom to add the latest SCSI peripherals to your USB-enabled system at any time.

Cross-platform flexibility and savings

USB2Xchange is compatible with both USB1.1 & USB2.0-enabled PC systems. This cross-platform compatibility allows you to easily move the adapter between PCs which gives you greater versatility and saves you money.

Easy plug-n-play connectivity and set-up

USB2Xchange converts a USB port to SCSI in seconds. There is no need to open the case, install cards, or change jumper switches.

True termination power management

No more termination power supply problems! USB2Xchange provides a solution that can function in all SCSI settings. If SCSI termination power is not available, the adapter automatically switches to receive its power from the USB bus. In rare cases when both sources are unavailable, USB2Xchange even incorporates a power supply connector so it can receive its power from an external power supply unit*.

Sleek, ultra-slim functional design

USB2Xchange is a 1 meter (39 inch) cable with an integrated USB2.0-SCSI adapter. It is lightweight, sleek, and portable. The adapter fits nicely in desktop and notebook PC environments and its slim design allows you to attach another SCSI connector, either side-by-side or stacked on top.

Connect 7 SCSI peripherals to one USB connector**

Add up to seven SCSI peripherals just by daisy chaining them together and enjoy super performance with each of them.

* Power supply not included.

** Works only with USB2.0, Windows 2000 and XP, maximum of four SCSI devices.
