High Accuracy

Advanced jaw design means that 30-series accuracy is little affected by external magnetic fields or off-centre conductor positioning. Utilisation of Hall effect technology ensures a broad flat frequency response resulting in optimum accuracy even when harmonics are present.

IEC 1010 and EMC conformance

IEC 1010 safety features including a tactile barrier and special jaw design provide the user with confidence when making measurements in hazardous voltage areas.

Conformance to EMC standards ensures high reliability through reduced susceptibility to electromagnetic interference.

True RMS measurement

By using True RMS measurement techniques the LH635 and LH1035 give maximum accuracy for non-sinusoidal waveform measurements often found with today's complex loads.
