

## AUS120

### ANTI-FLOOD SAUSAGES

Pack of 2 anti-flood socks, dimensions 120 x 18 cm, weight 550 gr. The barriers and sausages can be stored in dry rooms for up to 4 years in the original packaging, at a temperature of 5 - 30°C. Once activated, the bags can be stored and used for approximately 2 months, if not exposed to the sun. The barriers are made of non-woven polypropylene fabric with a sodium acrylate core.

Innovative range of products to block and divert water and sludge during flooding. Composed of organic polymers contained in a light polypropylene bag, they are extremely thin: after the

activation procedure these products increase their volume up to 24 times.

Characteristics

Technical information

## Characteristics

- allows autonomous and rapid intervention
- stops water leaks
- it is much more effective than a bag of sand
- It is easy to maintain and store

## Materials

- non-woven polypropylene fabric with sodium acrylate core
