The figure shows the standard item

Product Description

The module is designed for use within an Axioline F station.

It is used to acquire signals from standard thermocouples in industrial applications.

The module supports various types of thermocouple conforming to DIN EN 60584-1 and DIN 46710 as well as linear voltages from -100 mV to +100 mV.

It also offers a voltage input from -5 V to +5 V.

Heating currents can be monitored here, for example, using a measuring transducer.

The four Pt 100 inputs (CJ1 ... CJ4) can each be used as a sensor input or as an external cold junction.

Your advantages

- Internal detection and compensation of cold junction temperature (can be parameterized)

- High resistance to electromagnetic interference (Class A)
- ☑ Device rating plate stored
- ✓ Installation monitoring with indication via diagnostic LED for each channel
- Can be used under extreme ambient conditions
- Extended temperature range of -40 °C ... +70 °C (see "Tested successfully: use under extreme ambient conditions" in the data sheet)
- ☑ Partially coated PCBs
