## Product Description

*RS PRO flexible couplings made from Aluminium 7075 (A) are used where a degree of motion is needed between the shafts. These couplings can improve the performance of a machine and reduce wear and tear. They are easy to install and have a long-life span. The types of couplings that sit within the flexible couplings area are gear couplings, and universal joint couplings. Each coupling is manufactured as one piece, thereby eliminating mechanical joints and possible failure points.*
