

SUPER LUBE Shelf Life Information

Super Lube has a recommended shelf life of 5 years when kept in its original, unopened container under normal ambient conditions. Because it is a high-quality synthetic lubricant containing PTFE (Syncolon), it naturally resists evaporation and separation much better than conventional petroleum-based greases.

The 5-digit batch code reflects the date of manufacture, in format YYDDD.

e.g. Batch Code 24183: manufactured in year 2024 (24) on day 183 of the year

The Shelf Life is 5 years from date of manufacturing, so in above example the Best before Date is 01. July 2029.
