

Parker Product Datasheet

The replacement elements of the Parker IN-AGB Filter Series feature high quality filter materials. Leif elements with reusable metal sleeve are patented and safeguard the use of genuine parts.

PART NUMBER: 937788Q
FILTER HOUSING SERIES: IN0 (1-30)
FILTER ELEMENT: 10Q Microglass

PRODUCT OVERVIEW

The high quality replacement elements of the IN-AGB filter series are available in a wide variety of sizes and with several filter materials and micron ratings.

These replacement elements ensure the quality of filtration Parker is known for.

Fluid passes through the elements in an inside-to-outside direction, collecting particles inside the filter cartridge. This eliminates reinjection of contaminant during element change. Clean fluid then returns to the reservoir.

The IN-AGB series filters are available with Magnetic pre-filtration. The magnet column removes ferrous particles, even during times of bypass, and extends the life of the filter element.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media quality may save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.

TECH SPECIFICATIONS

DIVISION	Hydraulic & Industrial Process Filtration Division EMEA
SEAL MATERIAL	Nitrile
FILTER ELEMENT TYPE	Conventional disposable element
MAXIMUM PRESSURE DIFFERENTIAL	10 bar (ISO 2941)
