

Cal Cleanser

**Clean
and
Preserve**

- For new and old central heating systems
- Cleans sludge, flux and installation debris
- Just 1 bottle for average domestic system

**1000ml
1 LITRE e**

Benefits:

Suitable for use with all components. Will not harm aluminium or other metals. Requires no neutralisation. Can remove light rust. Helps to descale and soften water. Overdosing the system does not present a problem.

Description:

Cleans and neutralises sludge, flux, scale, silt, light rust, debris, oils and grease from new and old systems, as well as flocculating magnetite sludges and particulate residues, to facilitate their easy removal with a Powerflush machine. Use at 1% dilution (1 Litre to 100 Litres of water).

Instructions:

Connect Powerflushing equipment to system. Leaving all radiators open, add 1 Litre of CalCleanser per 10 radiators. To test that the mix has reached all parts of the system, switch the boiler on and see if the radiators are heating up evenly. Use Powerflush machine to change system water and dump sludge residues. We recommend circulating the mixture around the system for 30 minutes to 1 hour for an average heating system. Allow more time for heavily sludged systems. CalCleanser can be left in the system for up to 2 weeks without any detrimental effects.

Caution: Harmful if swallowed. Causes skin irritation. Causes serious eye irritation.

Wear protective gloves/protective clothing/eye protection/face protection.

IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell.

IF ON SKIN: Wash with plenty of soap and water.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

If eye irritation persists: Get medical advice/attention.

If medical advice is needed, have product container or label at hand.

Keep out of reach of children and pets.

Contains: Aryl ether phosphate ester, potassium salt CAS No. 72283-31-9.

Sodium carbonate CAS No. 497-19-8. Sodium nitrite CAS No. 7632-00-0
