

Parker Product Datasheet

The replacement elements of the Parker GS Filter Series feature high quality glass fibre and metal mesh filter materials.

PART NUMBER: 938075Q
LENGTH: 259 mm
SEAL MATERIAL: Fluoroelastomer
DIAMETER: 106 mm
FILTER ELEMENT TYPE: 10Q Microglass
MICRON RATING: 10 µm
OPTIONS: Standard
FOR USE WITH: GS7

PRODUCT OVERVIEW

The high quality replacement elements of the GS filter series are available in a wide variety of sizes and with several filter materials and micron ratings.

These replacement elements ensure the quality of filtration Parker is known for.

Fluid passes through the elements in an inside-to-outside direction, collecting particles inside the filter cartridge. This eliminates re-injection of contaminant during element change. Clean fluid then returns to the reservoir.

The GS series filters are available with Magnetic pre-filtration. The magnet column removes ferrous particles, even during times of bypass, and extends the life of the filter element.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after

market filters with unknown media quality may save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.

TECH SPECIFICATIONS

DIVISION	Hydraulic & Industrial Process Filtration Division EMEA
SEAL MATERIAL	Fluoroelastomer
FILTER ELEMENT TYPE	Disposable element
MAXIMUM PRESSURE DIFFERENTIAL	10 bar (ISO 2941)
