## Low-Voltage, 0.8- $\Omega$ ron, Dual SPST Analog Switch

## FEATURES

- Low Voltage Operation (1.6 V to 3.6 V )
- Low On-Resistance - r $\mathrm{r}_{\mathrm{DS}(o n)}$ : $0.8 \Omega$ @ 2.7 V
- High Current Handling Capacity:

150-mA Continuous

- Off-Isolation: $-56 \mathrm{~dB} @ 1 \mathrm{MHz}$
- Fast Switching: $25 \mathrm{~ns} \mathrm{t}_{\mathrm{ON}}$
- Low Charge Injection- $\mathrm{Q}_{\mathrm{INJ}}: 5.8 \mathrm{pC}$
- Low Power Consumption: $<1 \mu \mathrm{~W}$
- ESD Protection >2,000 V

## BENEFITS

- High Accuracy
- High Bandwidth
- TTL and Low Voltage Logic Compatibility
- Low Power Consumption
- Reduced PCB Space (SOT23-8 and MSOP-8)

## APPLICATIONS

- Mixed Signal Routing
- Portable and Battery Operated Systems
- Low Voltage Data Acquisition
- Modems
- PCMCIA Cards

## DESCRIPTION

The DG2741/2742/2743 are low voltage, single supply, dual SPST analog switches. Designed for high performance switching of analog signals, the DG2741/2742/2743 provide low on-resistance ( $0.8 \Omega$ @ +2.7 V), fast speed (ton,$t_{\text {OFF }}$ @ 35 ns and 33 ns ) and the ability to handle signals over the entire analog voltage range.

When operated on a $+3-\mathrm{V}$ supply, control pins are compatible with $1.8-\mathrm{V}$ digital logic. Additionally,on-resistance flatness and matching ( $0.18 \Omega$ and $0.08 \Omega$, respectively) offer high accuracy between channels.

The DG2741 contains two normally open (NO) switches, the DG2742 contains two normally closed (NC) switches, and the DG2743 contains one normally open and one normally closed switch. Break-before-make is guaranteed.

Built on Vishay Siliconix's low voltage submicron CMOS process, the DG2741/2742/2743 were designed to offer solutions that extend beyond audio/video functions, to providing the performance required for today's demanding mixed-signal switching in portable applications.

## ABSOLUTE MAXIMUM RATINGS

Reference to GND
V+ .................................................................. . -0.3 to +4 V

Continuous Current (NO, NC and COM Pins) .................. $\pm 200 \mathrm{~mA}$
Peak Current ............................................................. . $\pm 300 \mathrm{~mA}$
(Pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle)
ESD per Method 3015.7 $\qquad$

Storage Temperature (D Suffix)
Power Dissipation (Packages) ${ }^{\text {c }}$
6-Pin SC-70 ${ }^{\text {C }}$ $\qquad$ 250 mW

Notes:
a. Signals on NC, NO, or COM or IN exceeding $V+$ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC Board.
c. Derate $3.1 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $70^{\circ} \mathrm{C}$ of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## SPECIFICATIONS (V+ = 1.8 V )

## Notes:

a. Room $=25^{\circ} \mathrm{C}$, Full $=$ as determined by the operating suffix.
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
c. Typical values are for design aid only, not guaranteed nor subject to production testing.
d. Guarantee by design, nor subjected to production test.
e. $\quad \mathrm{V}_{\mathrm{IN}}=$ input voltage to perform proper function.
f. Guaranteed by 3-V leakage testing, not production tested.

## TYPICAL CHARACTERISTICS ( $25^{\circ} \mathrm{C}$ UNLESS NOTED)
