The CEPOVETT group is a European workwear market leader and manufacturer involved in every sector: from design and development to manufacture and logistics.

CEPOVETT Safety has inherited the group's values and draws on all the group's technologies and services. That means it can design, manufacture and distribute protective clothing that meet market standards for its clients. It's a long-standing brand.

CEPOVETT made its mark on the workwear world over 75 years ago and has sealed its reputation as CEPOVETT Safety.

A MODERN PIONEERING BRAND

A brand that listens to its market and changes with society.

Changes to legislation surrounding workplaces has helped everyone be accountable for the risks that exist in industry. Cepovett Safety provides expertise and specialisation with solutions that meet your needs for protection. Each garment is designed to not only comply with standards but look stylish too.

Our category 1, 2 and 3 PPE solutions are approved by official bodies. Our expert consultants can suggest the right solution for your company.

We believe that a workwear project's success isn't just down to our experience and technical expertise. Our team have fuelled our business for three generations and are committed to working with you to make your projects a success.

It all starts with a meeting between you and us with the same objective: to get an in-depth understanding of your challenges, your ambition, your budgetary requirements and provide you with the best professional clothing solution. We believe that our approach focusing on your colleagues will make the difference to your company.

#RESPONSIBILITY

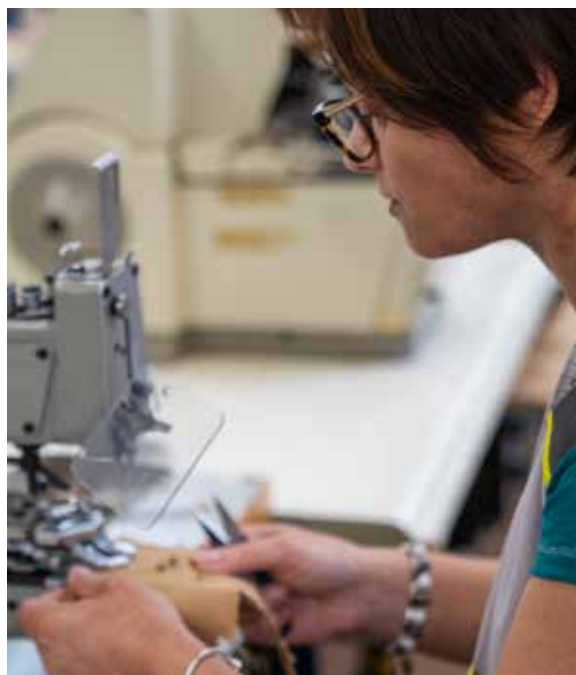

Internal responsibility with our Research & Development department (social & environmental) and responsibility towards workers: they have to feel that their lives are in safe hands. Our hands.

#GOODWILL

In-depth understanding of requirements, customer service, empathy and humility: we focus entirely on other people so we always meet everyday protection requirements.

#HONESTY

Just like the men and women who wear our clothes every day, we don't mess around. We don't embellish the effort or work; we show workers as they are in their real professional lives.

#Positive Impact

The #PositiveImpact certification applies to exemplary products in terms of sustainability, using materials with a low-carbon footprint (recycled, organic etc.) made in audited factories (in accordance with working and environmental regulations) and shipped by boat or train. Everything goes into a campaign for ecodesign and environmental corporate social responsibility.

CEPOVETT SAFETY'S 10 100% COMMITTED COMMANDMENTS

Designing quality, hard-wearing and functional collections for our clients

Eco-design our collections and packaging

Apply and exceed regulations about chemical use

Prioritise low carbon footprint fabric procurement as standard

MAKING A POSITIVE IMPACT WITH EVERYTHING WE DO

Exclusively use safe and audited factories to make our products

Educate our product users about the environment, Reims Town Hall's 200 staff wear Fluo Advanced (70% recycled polyester and 30% organic cotton)

Contribute towards general interest, global protection and common good projects

Improve our product supply chain and logistics

Positive Impact

Make our products available with a distribution network of clothing specialists in France and abroad

Encourage our products to be reused and recycled

FIT
YOUR KYRILL PARKA AND YOUR LINING

ALTER YOUR OUTFIT TO DO WHAT YOU NEED IT TO DO IN THE MOMENT

There is a choice of linings to pair with the ERWIN parka. Comfort, style and protection to suit your needs.

Lining fastening systems on the collar and cuffs.

A reversible zip fastens the thermal lining and parka "shell" together.

THE ERWIN RIPSTOP PARKA SHELL IN DETAIL:

Stand collar to keep out the cold and rain with a protective triangle to protect the wearer's skin.

A mesh body lining inside the garment provides comfort and protects the membrane. Taffeta hood and sleeve lining to make it easy to pull the parka on.

Several functional pockets: one on the waterproof chest, one inside, two lower pockets.

Adjustable cuffs with velcro tab.

Access hatch with zip for garment branding and checking waterproof bands.

Adjustable height with drawstring hood and stopper around face. Suitable for wear with helmet, the tab to fit the hood makes it easy and fast to remove in the event it catches.

Retro-reflective band on the shoulders for overhead visibility.

Double zip front under a press stud tab and sub-tab with a groove to let rain run off.

Friction and staining area in dark contrast colour on the collar, hem and cuffs

Full ripstop hem to avoid water capillarity in wet weather.

THE TATRAS XP HV SOFTSHELL IN DETAIL:

Stand collar to protect the wearer from the cold, wind and rain.

Double protective edge-to-edge reverse zip to fasten onto parkas.

Waterproof chest pocket with retro trim for trendy visibility

Lower pockets with slanted concealed zip for easy access under a protective flap.

Friction and staining area in dark contrast colour on the hem and cuffs

Contrast collar lining to avoid staining areas

Retro-reflective bands on the shoulders for overhead visibility

2-in-1 softshell with removable sleeves and a concealed zip to turn it into a bodywarmer

Left breast is "empty" to provide logo space.

Segmented retro-reflective bands for improved comfort and freedom to move.

Adjustable velcro cuffs to suit any size

Elasticated drawstring hem and stopper for improved protection against wet weather

ECO-FRIENDLY GARMENT

The Erwin parka contains mostly recycled polyester so it complies with our values and recycling policy.

WET WEATHER PROTECTION

Approved to meet the highest standards of the EN 343. It gets top marks, class 4 for the water penetration and evaporation test.

There is a choice of linings to pair with the KYRILL parka. Comfort, style and protection to suit your needs.

Lining fastening systems on the collar and cuffs. A reversible zip fastens the thermal lining and parka "shell" together.

This parka is made from stretch material so its elasticity and light weight provide maximum comfort. Its RIPSTOP (the yarn in the fabric structure is designed to be tear-resistant and stop any rips in their tracks) is very resistant to abrasion and its TPU membrane (waterproof breathable polymer) provides excellent water resistance and ventilation.

This versatile and functional garment is suitable for year-round use as a jacket to protect you from the rain and an outer shell to fit a range of fleece linings.

STRONG & STYLISH

A slim fit to suit women's body shapes.

BREATHABLE

Mesh body lining for the ultimate temperature control.

FREEDOM TO MOVE

Thermobonded segmented microbead retro-reflective band for improved freedom to move.

IMPORTANT USER INFORMATION

- Signalling clothing design is restricted by some of the standard's requirements.
The surfaces or position of retro-reflective bands cannot be altered after the garment has been purchased.
- Any badges applied to fluorescent areas must comply with the available fluorescent surface.
- Please contact us if you would like to customise our high visibility clothing.
- The garment must be fully fastened for the best protection.
- Fluorescent and retro-reflective materials can only be covered by another signalling garment of an identical or superior class.
- Please read the user guide included with each item: it details how to care and store your clothing.

EN ISO 20471 STANDARD (CATEGORY II PPE)

PROTECTION TO SIGNAL THE USER'S PRESENCE BOTH DURING THE DAY AND AT NIGHT

Provide conspicuity to workers on foot in the road transport sector on a work site or potentially dangerous situation in day and night light conditions and in a vehicle's headlights.

EN 20471 CLOTHING COMPOSITION

- Fluorescent fabrics for daylight visibility.
- Retro-reflective bands for visibility at night and under headlights.

CLASSIFICATION

There are 3 classes; the higher the clothing class, the more retro-reflective and fluorescent surfaces there are and the better the visibility.

The class of the garment is determined using 2 criteria:

The fluorescent fabric (yellow, orange or red)

The retro-reflective band or fabric surface

| CLASS OF CLOTHING | FLUORESCENT (m ²) | RETRO-REFLECTIVE (m ²) |
|-------------------|-------------------------------|------------------------------------|
| 1 | 0.14 | 0.10 |
| 2 | 0.50 | 0.13 |
| 3 | 0.80 | 0.20 |

X: Clothing class (1-3)

ECO-FRIENDLY GARMENT

Fabric made of **70% recycled polyester** and **30% organic fairtrade cotton**.

The fabric's environmental impact is offset by the reforestation project.

The cotton is skin-side down for **improved comfort**. Its 270g weight **means it's suitable for summer and winter alike**.

ERGONOMIC FIT

The FLUO ADVANCED trousers have an **auto-adjustable stretch waist** meaning the trousers **move with you** and **suit any shape or size**.

STRONG

The Ripstop grid structure makes the fabric most tear resistant.

Cordura® knee pads provide **improved resistance to wear and tear**.

The thermobonded, segmented retro-reflective bands make **the garment flexible and stretchy**.

Class 3 from size XL
Class 2 size S-L
MAX 25 CYCLES

VALLOUISE ZIP SWEATSHIRT REF. 9S03

The zip front and 2 lower flap pockets with zips make this sweater very functional with the added comfort of its piqué weave and soft brushed interior. Its lightweight and hi-tech 240gr fabric mean you can wear it during both the coldest and hottest times of the year. Its light feel comes from the segmented microbead retro-reflective bands. A varsity collar and ribbed hem and cuffs give the piece an even sleeker look. The turn-up sleeves and slim fit ensure the sweater fulfils its protective role.

FABRIC:

PIQUÉ FLEECE - BRUSHED INTERIOR 100% polyester 240gr/m²

SIZES: S-3XL

COLOURS:

- 750 - Fluo Yellow / Black
- 1806 - Fluo Red / Black
- 2073 - Fluo Orange / Black

STYLISH

A unique and modern take on this type of high visibility garment.

COMFORTABLE

Soft and comfortable internal brushed piqué weave.

BREATHABLE

A breathable weave that's great at wicking away moisture.

VERSATILE

This sweater can be worn all year round.

THE DIFFERENT CATEGORIES OF PPE

DOCUMENTS AND MARKINGS

HOW TO READ A CE LABEL?

PPE clothing has a CE label, and is always supplied with instructions for use.

The certified bodies in charge of the certifications deliver an TEC (Type Examination Certificate) to the manufacturer, which is specific to each certified piece of clothing.

For category 3 (life-threatening risks) PPE, there is also a module C2 or module D check.

These documents must be consistent with each other in order to obtain official certification.

WHAT PROTECTIVE CLOTHING SHOULD BE WORN IN ATEX ZONES?

WHAT DO THE REGULATIONS SAY?

DIRECTIVE 1999/92/EC - ANNEX 2 - PART 3

With a view to preventing ignition hazards, in accordance with Article 3, electrostatic discharges from workers or the working environment as charge carriers or charge generators must also be taken into account. Workers should be equipped with appropriate work wear made of materials that do not generate electrostatic discharges that can cause ignition in explosive atmospheres.

EU REGULATION 2016/425 - CLAUSE 2.6

PPE designed for explosive atmospheres.
PPE intended for use in potentially explosive atmospheres must be designed and constructed in such a way that it cannot be the source of an electrical, electrostatic or shock-related arc or spark which could ignite an explosive mixture.

MULTI-RISK PROTECTION FOR ALL TYPES OF RISKS

FOR WORKING IN ATEX ZONES, CLOTHING SUBJECT TO MECHANICAL RISKS AND ACTIVITIES SUCH AS GRINDING AND WELDING.

WHICH TRADES?

Heavy industry
Metalwork
Civil engineering/Construction and public works
Energy production and distribution
Road and rail network installation and maintenance
Prospecting/extraction
Workers in high-risk environments in indoor or outdoor areas with low light levels and/or near traffic routes (rail, road, air or sea) should wear **high-visibility multi-risk clothing**.

EN ISO EN 1149-5 STANDARD

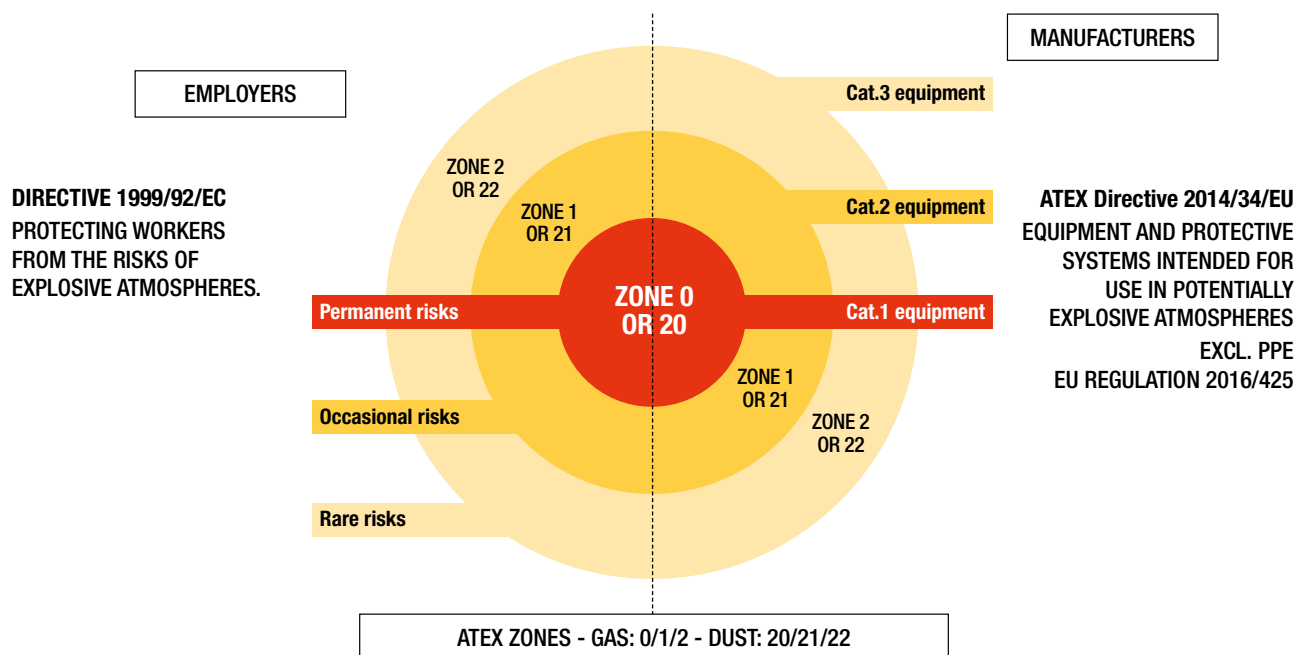

Electrostatic discharge protection

The 1149-5 standard still sets the benchmark for protective clothing intended for use in ATEX areas.

ATEX branding to identify 1149-5 standard PPE in the CEPOVETT SAFETY RANGE

FOCUS ON ATEX ZONES

WATERPROOF

This garment is suitable for use in wet weather. The inner seams are fully watertight for optimum protection against the rain.

BREATHABLE

The fabric, waterproof seams and the product itself have all been carefully designed to meet the highest standards of the water evaporation test.

FREEDOM TO MOVE

The segmented retro-reflective bands provide maximum freedom of movement and comfort when working.

MULTI-RISK PROTECTION

The fabric structure has been tested to an incident energy of 23 cal/cm² ATPV.

THE ULLY PARKA WORN WITH THE TEIDE SOFTSHELL: THE ULTIMATE IN PROTECTION FROM INDUSTRIAL HAZARDS

THE ULLY HV MULTI-RISK PARKA IN DETAIL:

The adjustable hood has an elasticated drawstring and toggle. The hood is also removable so you can take it off quickly if it gets stuck or caught.

The collar is fitted with a protective triangle to protect the wearer's skin

This multifunctional parka has 2 loops, 4 outside pockets and two inside pockets, as well as a retractable badge holder that can be stored in the chest pocket

Areas prone to rubbing and staining feature contrast colours: on the collar, hem and cuffs.

The flap makes it easy for the customer to brand and check the waterproof seams.

The retro-reflective bands on the shoulders leave plenty of room to customise the product

In order to provide you with the best possible thermal protection, we have included fittings under tabs so you can fasten it to our multi-risk softshells.

The cuffs can be adjusted with press studs.

THE TEIDE HV MULTI-RISK SOFTSHELL IN DETAIL:

It has 2 loops, 2 lower pockets and a chest pocket + a retractable badge holder that can be stored in the chest pocket

Segmented bands provide greater freedom to move

Contrasting colours are added to the areas prone to rubbing and staining: on the collar, the sides and the bottom of the sleeves.

Features a press stud fastening system to attach it to the multi-risk parka

The retro reflective bands on the shoulders leave plenty of room to customise the product

Pre-shaped sleeves for better comfort

Adjustable cuffs on the inside of the wrist with two hidden press studs

THE TEIDE SOFTSHELL COMPLIES WITH ALL MULTI-RISK STANDARDS AFTER 25 CYCLES

PROTECTION

The protective properties of the fabric are intrinsic, i.e. they are part of the fabric and will not be lost through washing or wear.

COMFORTABLE

Increased comfort by using Lyocell® fibres instead of cotton, which also improves breathability. Thanks to the special biological cellulose fibre composition, the wearer feels cooler, drier and more comfortable.

*ATPV values apply to fabrics only

BREATHABLE

Tencel® fibres not only absorb more moisture but they also do it faster than other fibres. Any moisture is trapped inside the fibres and not on the surface, which stops germs from spreading.

PERFORMANCE

An eco-friendly product that brings the highest multi-risk standards together with the ultimate in comfort.

INDIVIDUAL CERTIFICATION

Each clothing model is certified individually so you can swap the work jacket for a base layer or weatherproof garment.

MODERN STYLE

Showcase your personality without sacrificing safety in this two-tone range.

VISIBILITY

Protection to visually signal the wearer in medium risk situations with the EN 17353 standard.

MULTI-RISK PROTECTION

EN ISO 17353 STANDARD

Protection to visually signal the wearer in medium risk situations

The situation:

The EN 17353 standard requires professional and non-professional garments to have retro-reflective bands and fluorescent material which are not covered by the EN ISO 20471 standard for high visibility equipment. There is no longer any distinction between professional workwear and non-professional workwear for the EN ISO 20471 standard.

The risk:

Equipment for improved visibility are designed to make users more visible in moderate risk situations in all daylight conditions and/or under headlights or vehicle headlamps in the dark.

This risk has been addressed by the design and establishment of the standard: EN 17353

The new EN 17353 standard has 3 classifications:

TYPE A

TYPE B1 OR B2 OR B3

TYPE AB

Type A: Visibility in daylight conditions, this equipment uses only the fluorescent material

Type B: Visibility in dark conditions, this equipment uses only the retro-reflective material:

- B1: free hanging retro-reflective devices - not applicable to our range of products
- B2: Limbs
- B3: Torso or Torso and Limbs

TYPE AB: Visibility during daylight, twilight and dark conditions, this equipment uses the fluorescent and retro-reflective material

ATEX REFLECT 320 XP

THE OSTRY JACKET IN DETAIL:

BREATHABLE

Tencel® fibres not only absorb more moisture but they also do it faster than other fibres. Any moisture is trapped inside the fibres and not on the surface, which stops germs from spreading.

PERFORMANCE

An eco-friendly product that brings the highest multi-risk standards together with the ultimate in comfort.

INDIVIDUAL CERTIFICATION

Each clothing model is certified individually so you can swap the work jacket for a base layer or weatherproof garment.

PROTECT YOURSELF WITH LAYERS

Your staff's comfort is vital, helping you match the products together properly is our job. Each individual garment protects you. Combining every layer provides the ultimate in protection i.e. for the electric arc standard.

TYPES OF LAYERS

PROTECTIVE LAYER

A shell to protect the wearer from external aggressors and adverse weather. It has to be breathable to work properly.

THERMAL LAYER

The second layer keeps out the cold and creates a thermal shield.

SECOND-SKIN LAYER

The base layer keeps you dry by wicking moisture away to the top layers. Fast-drying breathable fabrics are recommended.

THE STANDARDS IN DETAIL

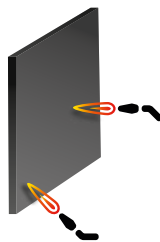

EN ISO 11612: 2015

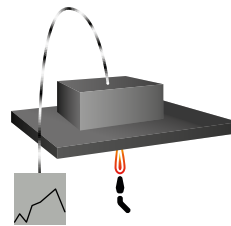

PROTECTIVE CLOTHING FOR HEAT AND FLAME

Clothing providing limited flame spread properties in the event of exposure to heat emitted by: radiation, convection, contact or splashes from molten metal

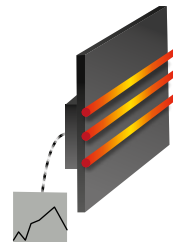

Performance coding:

Index A:
Limited
flame spread

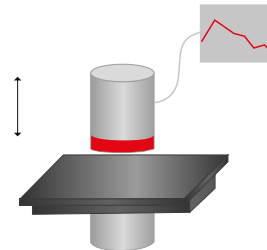

Index B:
Convection

Index C:
Radiant heat

Index D:
Molten aluminium splashes,
Index E:
Molten cast iron splashes

Index F:
Contact heat

**MARKING MUST
COMPLY WITH THE
STANDARD**

EN ISO 11611: 2015

PROTECTIVE CLOTHING FOR USE IN WELDING AND ALLIED PROCESSES

CLOTHING DESIGNED TO PROVIDE PROTECTION FROM

small splashes of molten metal
Brief contact with a flame
Radiant heat from the arc
Accidental brief contact with a live electrical conductor
up to 100V DC under normal welding conditions

CODIFICATION OF PERFORMANCES AS FOLLOWS:

INDEX A:

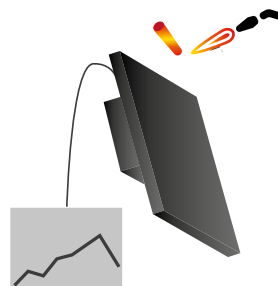

Limited flame spread

Class 1: low risk

Class 2: greater risk

CHOICE OF CLASS SUBJECT TO:

The welding technique used
Environment conditions

MOLTEN METAL PROTECTION

When a metal is heated to a liquid state, it is subject to temperatures between 660°C for aluminium and 1600°C for iron metals.

Users must wear fire-resistant fabrics that molten metal can slide off but not stick to for their protection.

Aramid-based fabrics are not suitable for exposure or splashes from molten metal as molten metal sticks to aramid fabrics.

This type of protective clothing tends to use fairly heavy fabrics. The ALU PROTECT range fabric weighs 375g: it blends Lenzing FR and wool but is still incredibly flexible and comfortable.

MORE ABOUT THE STANDARD

EN 13034:2005 + A1:2009

PROTECTIVE CLOTHING AGAINST LIQUID CHEMICALS

These protective garments are designed for use in the likely event of exposure to light spatter or splashes from liquid chemicals which don't require a total barrier.

Two sub-classifications:

Type 6 (full body).

E.g. Coverall or all-in-ones.

Type PB6: Partial body

E.g. Separate jacket or trousers.

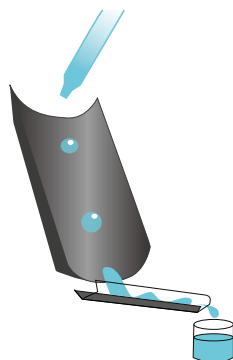

4 types of chemicals tested - Repellent & penetration:

Sulfuric Acid 30%

Sodium Hydroxide (caustic soda) 10%

1-Butanol (Alcohol)

O-Xylene (hydrocarbon)

AGROCHEMICAL PROTECTION

THE EN ISO 27065 STANDARD OUTLINES PERFORMANCE REQUIREMENTS FOR PROTECTIVE CLOTHING WORN BY OPERATORS HANDLING PESTICIDES.

THE STANDARDS IN DETAIL

EN ISO 27065

PROTECTIVE CLOTHING FOR WORKING WITH PLANT PROTECTION PRODUCTS

This coverall is designed to protect workers exposed to fertilisers with certain usage and care requirements.

This coverall must be specifically designed for activities involving exposure to fertilisers. To help identify them, this pictogram  appears on the flap of the pocket on the left leg.

They have a PPE label with the CE marking including a table with 30 boxes to keep track of washes (maximum 30 cycles).

Like any PPE, they come with a user guide stating that this PPE cannot be washed at the same time as other workwear or household laundry.

Designed in partnership with BASF and tested on farm workers during the 2016 campaign, this new PPE clothing was designed with the prime objective to be far more comfortable than current overalls providing limited protection against chemicals. This coverall is protective equipment suitable for fertiliser users made from 100% French fabric.

Important: when mixing/filling and cleaning the spray, an EN ISO 27065: 2017 level C3 chemical protection apron must be worn over the coverall.

CEPOVETT SAFETY fulfils its duty in managing end-of-life products as a member of the ADIVALOR programme.

THE 4 "PILLARS" OF PREVENTION

INFORMATION

Read product and equipment labels to check the usage, storage and care requirements and which precautions to take.

SITE ORGANISATION

Prior organisation of treatment sites, strict separation between living area and area where fertilisers are used (tools, equipment, PPE). Maintain a clean and organised working area...

HYGIENE

Prioritise hand washing before and after any work, shower at the end of the working day. Clarify dressing/undressing procedures.

No smoking, drinking, eating or telephoning when using fertilisers...

PROTECTIVE EQUIPMENT

collective protective equipment (CPE): tractor cab filter, demarcated storage areas, CTS systems, dust deflector on seeder etc.

personal protective equipment (PPE): gloves, masks, specific protective clothing etc.

PPE is the "last element" of prevention alongside other measures to eliminate or reduce risk.

EN ISO 27065

ARTICLE DELETED

PHYTO PROTECT2 ZIP COVERALL

REF. 9J41-9532

Double zip coverall to pull over clothing with ease . Injected zip front closure under tab, rip-tape fastening with zip puller to make it easy to put on . Chest flap pockets with concealed rip-tape closure . Mesh side flap pockets with concealed rip-tape closure . Elasticated cuffs with thumb holes to pull on gloves with ease . Thigh flap pocket with concealed rip-tape closure . Adjustable rip-tape ankles . Back vent with mesh for maximum ventilation . Elasticated back . Plastic haberdashery . Badge for branding . 80cm inseam. Guaranteed for 30 cycles, machine washable

9532 FABRIC:

67% POLYESTER - 33% COTTON - 240GR

Lightweight French fabric, mainly water-repellent polyester/cotton (without reimpregnation), approved for stopping fertilisers penetrating.

SIZES: XS/0-3XL/6

COLOURS:

● 2397 - Graphite Grey / Forest Green

This PPE garment is designed to provide a water-repellent coverall solution with the use of French mainly polyester fabric, guaranteed for 30 washes with no re-treatment.

NOTE: do not wash with other workwear or household clothing

Important: when mixing/filling and cleaning the spray, an EN ISO 27065: 2017 level C3 chemical protection apron must be worn over the coverall.

PHYTO ACCESS

EN ISO 27065

ACCESS PHYTO APRON REF. 9Y41

Long sleeves, full-body coverage down to the boots . Rip-tape neck closure and elasticated waist strap . Pulls on from the front, over coverall . Sleeve and apron length can easily be cut to size to suit the wearer. The 9Y41 apron provides additional protection to coverall during the preparation, mixing, loading and cleaning stages.

FABRIC:

100 MICRON LDPE POLYETHYLENE

ONE SIZE FITS ALL

COLOURS:

● 6021 - Grey

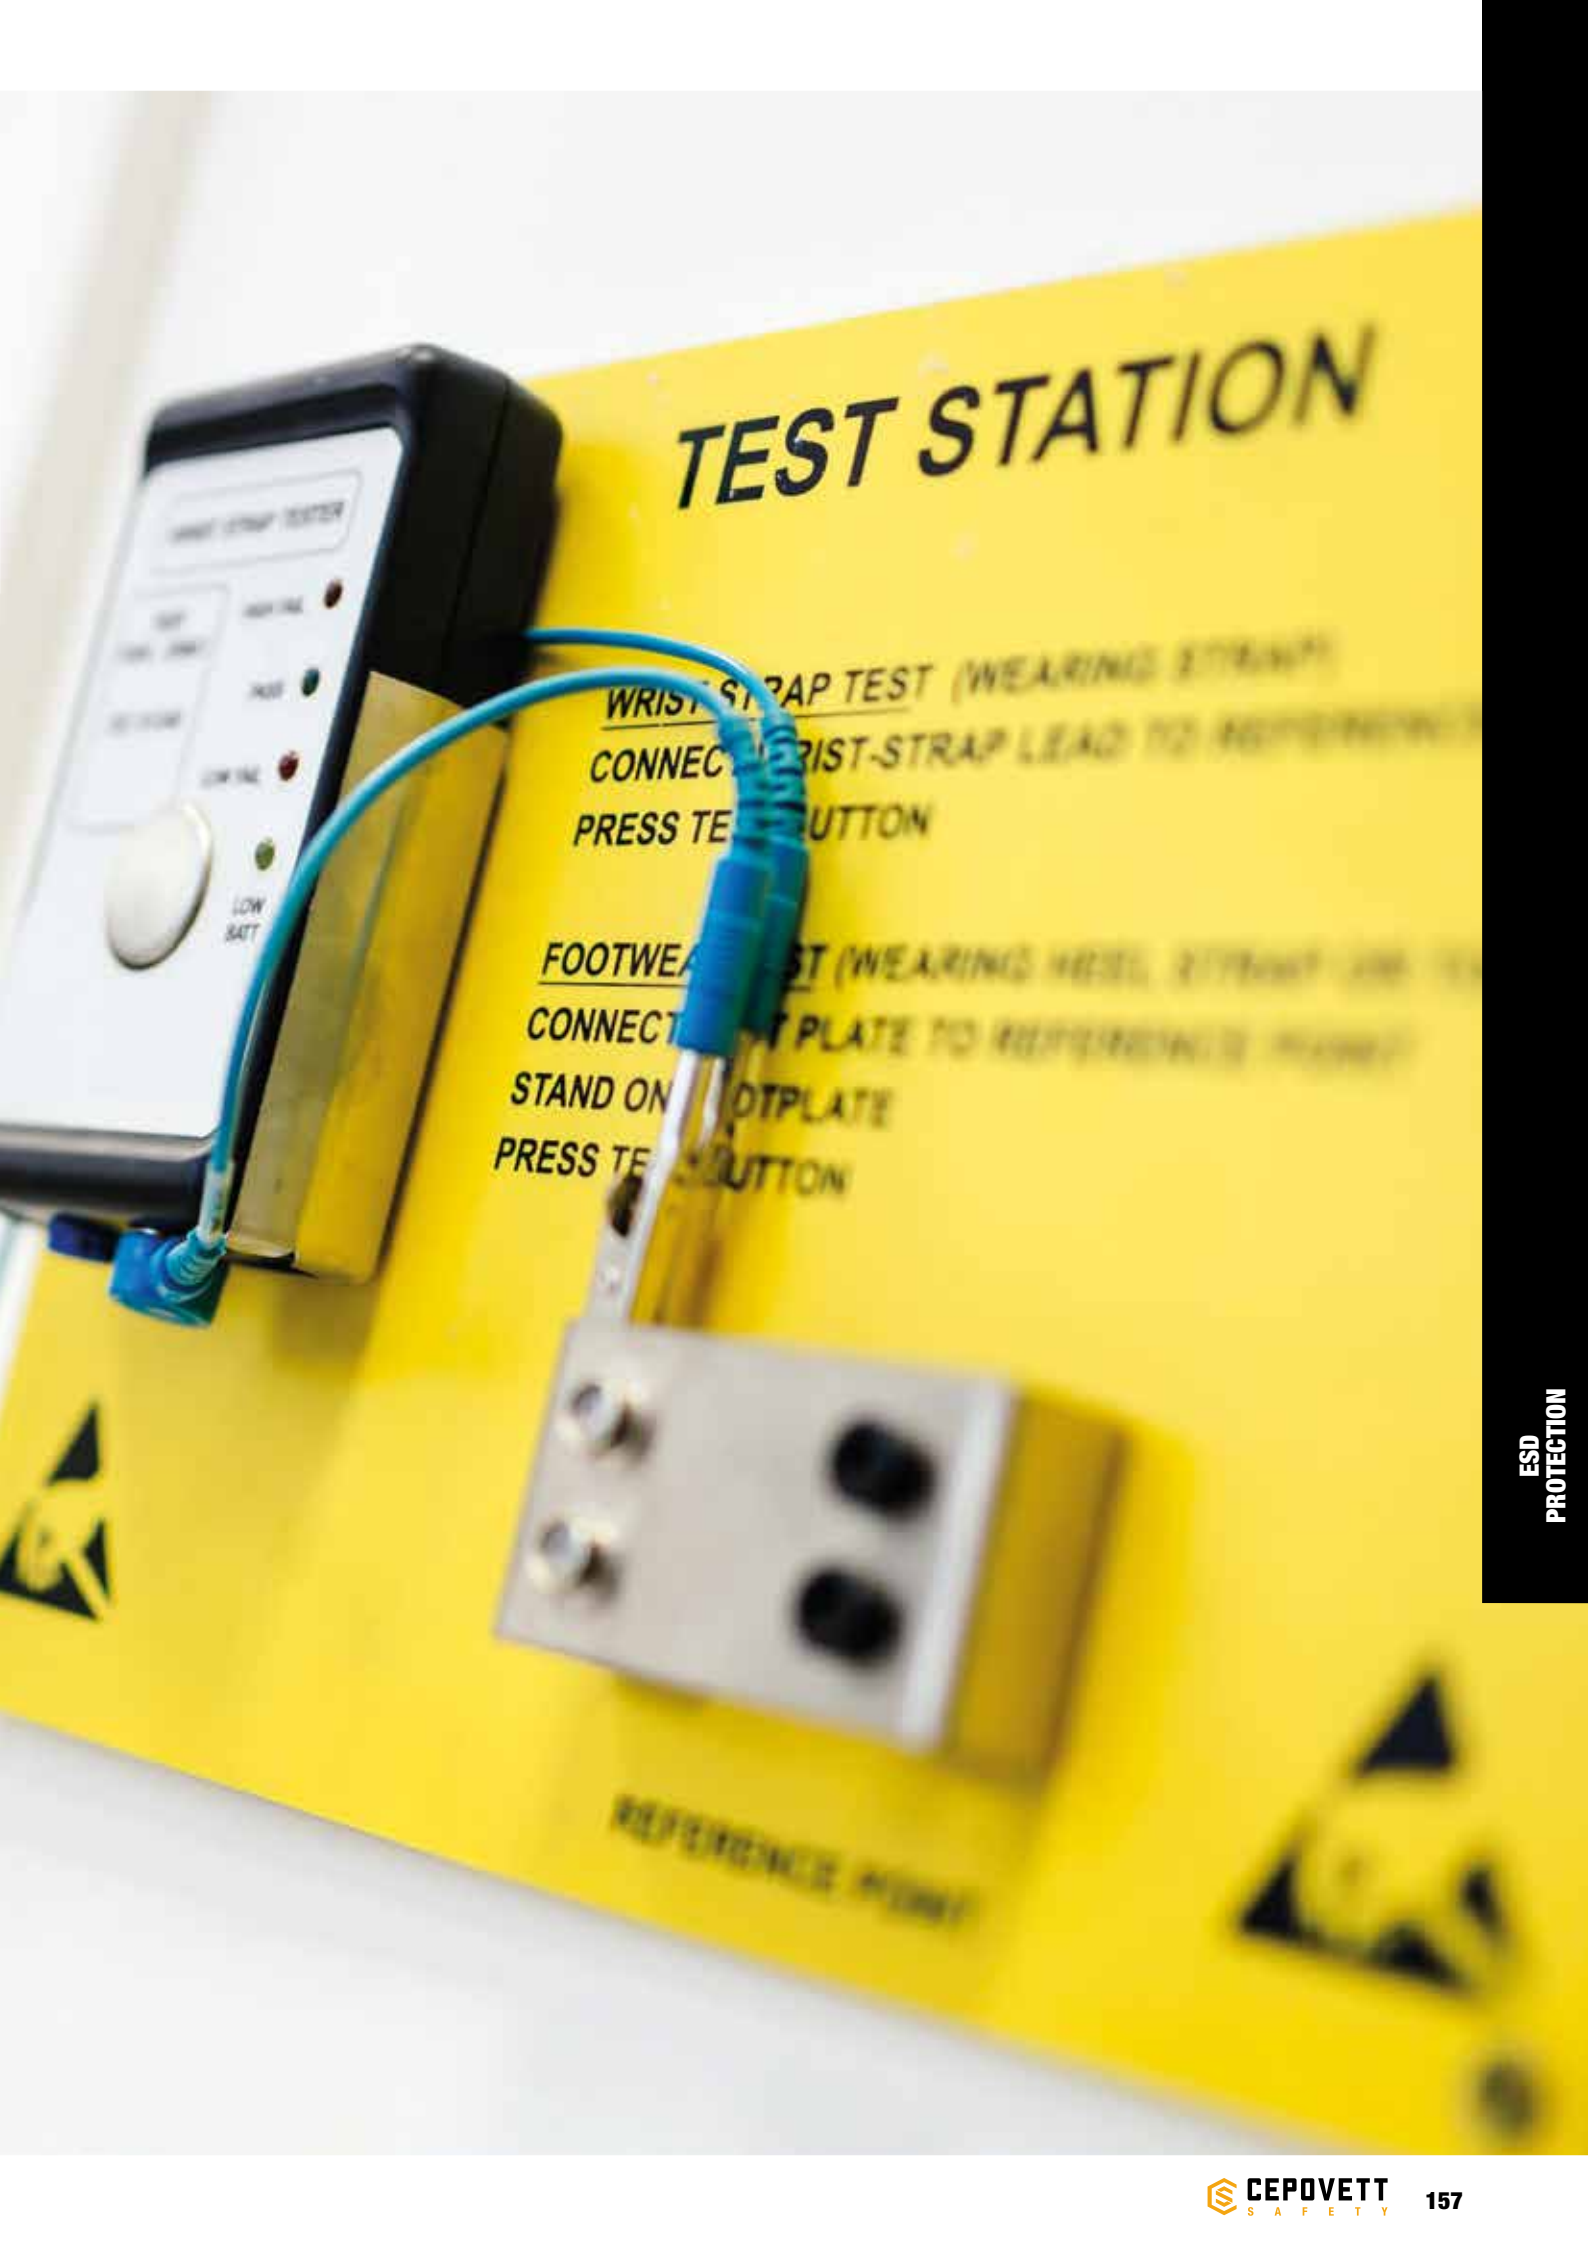

The elasticated strap at the back on the waist allows the apron to fit any size.

NOTE: rinse only

Important: limited use, designed to be worn until damaged. Product can be rinsed in water and left to air-dry after each use. When mixing/filling and cleaning the spray, an EN ISO 27065: 2017 level C3 chemical protection apron must be worn over the coverall.

REFERENCE POINT

ESD PROTECTION

Humans are excellent conductors of electricity.

Just by moving, we can create a static charge of several thousand volts.

Electrostatic charges are a recurrent source of damage to electronic equipment: to avoid them, it is absolutely essential to wear appropriate clothing and other equipment.

SENSITIVE PRODUCTS MUST BE HANDLED IN PROTECTED AREAS, USUALLY IDENTIFIED BY THIS SYMBOL:

CLOTHING IN ACCORDANCE WITH IEC 61340-5-1: 2016

Equipment for protecting electronic devices against electrostatic discharges (ESD).

Electrostatic discharges can damage electronic components, such as integrated circuits. They can also cause electronic system malfunctions.

IEC 61340-5-1: 2016 ESD clothing protects these electronic components from being damaged by electrostatic discharge.

The fabric used is 64% polyester, 35% cotton & 1% antistatic fibre.

This polyester-cotton blend has a carbon-fibre matrix which eliminates the risk of electrostatic discharge in sensitive areas. This is an essential requirement in sectors such as the electronics industry, especially when working on highly sensitive electronic components.

KNEE PROTECTION

A fall or prolonged kneeling can be enough to cause hygroma. Intense friction from hard surfaces is both uncomfortable and a potential risk of injury. Constant pressure on your knees and other joints can lead to chronic diseases such as knee hygroma. Workers must therefore adapt their work equipment to their work environment.

TRADES

Any trade with extended periods of time spent kneeling on uneven or hard ground
Tilers, plumbers etc.

MORE ABOUT THE STANDARD

EN 14404 KNEE PROTECTION

4 types of protection:

Type 1: Knee guards that are separate to any clothing and fit around the leg.

Type 2: Plastic foam inserted into trouser leg pockets.

Type 3: Equipment that isn't fitted to the body but put in place when the user moves. It can be provided for each knee or both knees together.

Type 4: Accessories with additional functions e.g. a frame to help you get up or kneel down.

3 levels of protection:

Level 0: zero protection from penetration

Level 1: suitable for flat and uneven surfaces + protection from penetration of small objects up to 1cm. Protects against penetration by a force of at least 100 N.

Level 2: suitable for flat and uneven surfaces in difficult conditions. Protection from penetration of objects larger than 1cm. E.g. work in mines and quarries. Protects against penetration by a force of at least 250 N.

The standard sets minimum values for the dimensions of the protective zones as well as mechanical requirements (consistency, pressure distribution, etc.), comfort requirements (fastening, etc.) and marking obligations. This standard specifies the requirements for knee protection for kneeling work.

No amount of knee protection can guarantee that workers will not suffer medical complications if they have to kneel for long periods of time. It is important that knee protection does not restrict blood flow into the leg when kneeling or standing. It is therefore important that workers can easily change positions and stand up frequently while wearing knee protection, in order to maintain normal blood circulation. Knee pads that are inserted into the trousers should remain in place when kneeling and should be large enough to ensure that the knees are fully protected when moving.

LIGHTWEIGHT

Main fabric in 50% cotton - 50% waterproof polyamide - 240gr. Extremely lightweight but very strong, owing to the use of polyamide, an extremely strong, tear-proof synthetic fibre.

DURABLE

The padded fabric blends 50% brushed long fibre cotton with 50% Cordura® nylon - 250gr. Combination of superior resistance to scuffs, tears and scratches. Long life and comfort for the wearer.

COMFORTABLE

Stretch twill panels in 71% cotton, 23% polyamide, 6% elastane - 320gr. The 6% elastane content provides maximum flexibility and elasticity for ease of movement. The soft finish gives a pleasant feel. Easy to maintain and excellent dimensional stability.

ADVOCATING ALTERNATIVE AND ETHICAL MATERIALS

SOURCING SUPPLIES DIFFERENTLY

Creating responsible workwear requires the use of certified raw materials, French fabrics and ethical industrial procedures. CEPOVETT has been a pioneer in fairtrade cotton in the professional sector since 2007 and has also made a particularly strong commitment to fairtrade in Africa. From fairtrade cotton recycled materials, there are many possible alternative solutions for ethical fabrics.

DURABLE COTTON

CEPOVETT stands out as one of the pioneers in recycling plastic bottles to provide customers with eco-friendly and innovative fibres. PET is easy to recycle for countless functions i.e. to make polyester fibre to manufacture warp and weft fabric, fleece and other hi-tech clothing. Polyethylene terephthalate is used to make synthetic fabrics as well as plastic bottles and packaging.

In terms of its commitments to the African continent, CEPOVETT sources fairtrade cotton primarily in Africa in collaboration with its textile manufacturer partners and prioritises sustainably-farmed supplies which are better for the environment. The use of chemicals and pesticides is capped to reduce soil, water and living organism pollution.

FAIRTRADE/MAX HAVELAAR,
FAIRTRADE LABEL

MAX HAVELAAR LABEL

CEPOVETT provides customers with fairtrade cotton alternatives which means it produces clothing with approved and guaranteed raw materials. Fairtrade cotton ensures cotton farmers are paid a set minimum wage and that their farm is given expansion grants.

SIZE GUIDE

Please use the correct measurements to order your clothing.

Use our measurement tables below.

Take the appropriate measurement for each clothing type then refer to the table to help choose the right width.

❶ CHEST WIDTH

The chest measurement at the widest point

❷ WAIST WIDTH

Taken below the navel.

❸ HIP WIDTH

At the strongest point with legs together.

CARE INSTRUCTIONS

WASHING

Do not wash - dry clean only.

Hand wash at 40° maximum.

Machine wash - normal.

The number in the tank indicates the maximum wash temperature.

Machine wash - delicates.

The number in the tank indicates the maximum wash temperature.

IRONING AND DRYING

The crossed out iron indicates that the garment should not be ironed.

1 dot: iron at a low temperature (max. 110°) and preferably without steam.

2 dots: iron at a medium temperature (max. 150°).

3 dots: iron at a high temperature (max. 200°).

The crossed-out symbol indicates that the garment should not be tumble-dried.

1 dot: Tumble dry on a delicate program.

2 dots: Tumble dry on a normal program.

DRY CLEAN

The crossed-out symbol indicates that the garment should not be dry cleaned.

P: The garment can be washed with perchloroethylene.

P underlined: The garment can be washed with perchloroethylene, with temperature and additional moisture restrictions.

BLEACHING

The crossed-out symbol indicates that chlorine or bleach should not be used on this garment.

Empty triangle: The garment can be cleaned with chlorine or sodium percarbonate.

TEXTILE STANDARDS

EN ISO 20471

PROTECTION TO SIGNAL THE USER'S PRESENCE BOTH DURING THE DAY AND AT NIGHT

High visibility clothing is designed so their wearers can be distinguished by vehicle drivers or machinery users in day and night light conditions and in a vehicle's headlights.

The class of the garment is determined using 2 criteria:

The fluorescent fabric (yellow, orange or red)

Retro-reflective bands or materials

| CLASS OF CLOTHING | FLUORESCENT (m²) | RETRO-REFLECTIVE (m²) |
|-------------------|------------------|-----------------------|
| 1 | 0.14 | 0.10 |
| 2 | 0.50 | 0.13 |
| 3 | 0.80 | 0.20 |

EN ISO 11611

WELDING ALLIED PROCESSES

Clothing designed to provide protection against: small molten metal splashes, short contact with flame, radiant heat from the electrical arc or molten metal splash, accidental contact with live electrical conductors (100V max).

Performance codification as follows:

A: limited flame spread

Class 1: low risk

Class 2: greater risk

Choice of class subject to:

The welding technique used

Environment conditions

EN 13034

LIMITED PROTECTION AGAINST LIQUID CHEMICALS

These protective garments are designed for use in the likely event of exposure to light spatter or splashes from liquid chemicals which don't require a total barrier.

Two sub-classifications:

Type 6 (full body) e.g. coverall and all-in-one jacket & trousers

Type PB[6] (part of the body) e.g. separate jacket or trousers.

4 chemicals tested - repellent & penetration

Sulphuric Acid 30%

Sodium Hydroxide (caustic soda) 10%

1-Butanol (Alcohol)

O-Xylene (hydrocarbon)

| CLASS | LIQUID REPELLENCY INDEX | RESISTANCE TO LIQUID PENETRATION INDEX |
|-------|-------------------------|--|
| 3 | > 90% | <1% |
| 2 | > 80% | <5% |
| 1 | > 70% | <10% |

EN ISO 17353

PROTECTION TO VISUALLY SIGNAL THE WEARER IN MEDIUM RISK SITUATIONS

The EN 17353 standard requires professional and non-professional garments to have retro-reflective bands and fluorescent material which are not covered by the EN ISO 20471 standard for high visibility equipment.

The new EN 17353 standard has 3 classifications:

TYPE A

TYPE B1 OR B2 OR B3

TYPE AB

Type A: Visibility in daylight conditions, this equipment uses only the fluorescent material

Type B: Visibility in dark conditions, this equipment uses only the retro-reflective material:

- B1: free hanging retro-reflective devices - not applicable to our range of products
- B2: Limbs
- B3: Torso or Torso and Limbs

TYPE AB: Visibility during daylight, twilight and dark conditions, this equipment uses the fluorescent and retro-reflective materials.

EN ISO 11612

HEAT AND FLAME PROTECTION

Clothing that provides limited flame spread properties in the event of exposure to heat emitted by: radiation, convection, contact or splashes from molten metal

Performance coding: A1 or A2/A1 and A2

A: limited flame spread

B: Convection (B1-B2)

C: Radiant heat (C1-C4)

D: Molten aluminium splashes (D1-D3)

E: Molten cast iron splashes (E1-E3)

F: Contact heat (F1-F3)

3 levels of risk exposure:

1: Low/2: Medium/3: High

UK
CA

about textile standards at
www.cepovett-safety.com

EN ISO 14116

HEAT AND FLAME PROTECTION

Clothing designed to protect the wearer against occasional, brief contact with small flames, under conditions that do not represent a significant thermal hazard and in the absence of other types of heat.

Performance coding:

Limited flame spread index (1-3)

Index 3 corresponds to level A1 in the EN ISO 11612 standard method A

EN 1149-5

ELECTROSTATIC DISCHARGE PROTECTION

Clothing whose fabrics and design, alongside a grounding system, avoids inflammatory discharges in explosive atmospheres.

Electrostatic properties achieved by treatment or addition of conductive fibres (stainless steel, carbon etc.)

EN ISO 20345:2004 standard A - anti-static footwear

Keep garment in contact with skin – Collar/cuffs or a grounding band.

No badges allowed in hazardous areas or on the garment's exterior

EN 14058

PROTECTION FOR COLD CLIMATES (DOWN TO -5°)

Protective clothing designed to protect the body against moderately cold environments - Temperature down to -5°C

Performance coding based on 5 indices:

Y: Thermal resistance class - RCT

Y: Air Permeability Class - AP

Y: Insulation value – Motionless mannequin test – Icler

WP: water penetration (optional)

X indicates that the item of clothing has not been tested

EN ISO 27065

PESTICIDE PROTECTION

Protective, high-performance clothing for those who work with liquid pesticides and farm workers.

3 levels of protection:

C1

C2 low intensity spray test

C3 high intensity spray test

EN 15797

INDUSTRIAL WASHING

8 different laundry programmes

2 drying methods drum or tunnel/xxx

IEC 61482 / EN 61482-2

PROTECTION AGAINST THE THERMAL HAZARDS OF ELECTRIC ARCING

Clothing designed to protect the wearer from the thermal risks of electric arcing when working on live equipment.

The ATPV is the maximum thermal energy that the garment can withstand before the user suffers second degree burns.

The EBT value is the highest energy exposure value that a fabric can withstand before tearing.

These garments are not insulating, so they do not protect the wearer from the risk of electrocution.

EN 14404

KNEE PROTECTION

This equipment is intended to protect people who spend a lot of time working on their knees.

4 types of protection

3 levels of tear resistance

Effective protection requires trousers or coverall with the right type of protection.

Certification of clothing + protection

EN 342

PROTECTION AGAINST COLD (BELOW OR EQUAL TO -5°)

Protective clothing designed to protect the body against cold environments - Humidity and winds with temperatures of -5°C or lower

Performance coding based on 4 indices:

Y: Insulation value – Moving mannequin test – Icler

Y: Air Permeability Class - AP

WP: water penetration (optional)

X indicates that the item of clothing has not been tested

EN ISO 13758-2

PROTECTION AGAINST UV SUN RAYS

The garment must completely cover the torso/neck from shoulders to thighs.

The protection factor (UPF) should be above 40.

EN 343

PROTECTION FROM THE ELEMENTS & BAD WEATHER

Protective clothing designed to protect the wearer against bad weather (rain or snow), fog and dampness on the ground.

Performance coding based on two indices:

X: Water penetration resistance class (1 to 4)

Y: Water vapour resistance class (1 to 4)

R: Optional: Ready-to-wear garment tested under a rainfall simulator

R is replaced by X if the garment has not been tested

These garments must have watertight seams.

THE ATEX logo on the garment's sleeve is solely for visual purposes to identify 1149-5 standard PPE in the CEPOVETT SAFETY range.
