# **LeCroy**

# FlexRay<sup>™</sup> Trigger, Decode and Physical Layer Test

## **Features and Benefits**

- The most comprehensive oscilloscope-based
   FlexRay solution
- Complete FlexRay Trigger
  Decode and Physical Layer
  Test in one instrument
- Triggering and decoding of FlexRay protocol version 3.0
- Eye diagram mask testing with error location
- Physical layer measurement parameters for Propagation Delay, Asymmetric Delay, Truncation and Jitter
- Supports 2.5, 5, and 10 Mb/s FlexRay signals
- Easily view the decoded signals with an intuitive color-coded decode overlay
- Supports triggering for
- Frame ID (Static and Dynamic)
- Frame Cycle Count
- Frame Qualifiers
- Symbols
- Errors
- Convenient table display with quick "zoom to byte" capability
- Quick Search capability for specific message packets

## Built-in Oscilloscope Trigger Makes Setup Easy

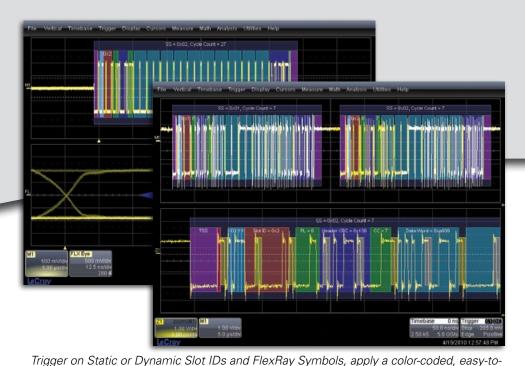

Isolate specific FlexRay messages with the built-in oscilloscope trigger. Since the trigger is not a FlexRay node, connection to your FlexRay bus is simplified; and no re-programming of the vehicle network is required, simply connect a differential probe to your FlexRay signal. All the triggering is done in the oscilloscope and setup is completely integrated into the intuitive trigger menu.

Patented software algorithms deconstruct the waveform into protocol decode information, then overlay the decoded data on the waveform. Depending on the time base setting or the amount of zoom, the decode information is condensed or expanded to better assist in understanding events. Various sections of the protocol are colorcoded to make it easy-to-understand. Communication Cycle Start and Error Frames are highlighted. The decode operation is fast-even with long acquisitions. The user can choose to decode into Hex or Binary formats.

## **Powerful Physical Layer Test**

Quickly locate physical layer problems using powerful eye diagram mask test, watch the eye build up over time and use the error indicator to find mask violations and isolate problems. Mask testing combined with the built in automated FlexRay timing measurements let you know how your FlexRay physical layer is performing.

understand decode over your FlexRay signal, perform automatic eye diagram mask testing

# **BROADEST OSCILLOSCOPE-BASED FLEXRAY SOLUTION**

## **Extensive Triggering**

Triggering on the complex FlexRay protocol is made easy with an intuitive interface and a wide range of trigger settings for all aspects of the protocol. Set up a simple TSS (Start) symbol trigger with a single button press or trigger on any part of a FlexRay frame including ID, Cycle Count, Cycle Repetition Factor and Frame Qualifier. FlexRay defined Symbols and Errors can also be incorporated into the trigger making it as simple or advanced as necessary. Conditional triggering can be set to trigger on a range of Frame IDs or Cycles.

Eye Diagram Mask Testing

Eye diagrams are an important part

of testing many serial data standards

LeCroy's techniques developed with

extremely fast serial data signals, the

FlexRay eye diagram mask test overlays all the bits on FlexRay signal in an eye diagram with pass/fail mask testing. Tell the oscilloscope to stop on any mask violation and quickly locate the source of physical layer problems. By configuring the trigger for a specific Frame ID or range of IDs an eye diagram can be created to show only those Frames.

and FlexRay is no different. Leveraging

Trigger on every aspect of the FlexRay Frame as well as Symbols and Errors including FSS, BSS, FES, CRC, CID, CAS/MTS and Wakeup by selecting the appropriate boxes.

# THE VERSULE TRUMPERS TRUE COLORS AREADS AND ALLONG AND

Gain valuable insight into your FlexRay communications channel by viewing eye diagrams, physical layer measurements and decoded protocol data at one time.

Physical Layer Measurements

Seeing the eye diagram gives good insight to your FlexRay system but measuring key timing parameters like Propagation Delay, Asymmetric Delay, Truncation and Jitter help you understand how signals propagate along the channel. Use LeCroy's statistics and histicons to understand the range of measurements on the FlexRay channel.

Measure	PrDly(C2,C3)
value	6.937 ns
mean	6.78813ns
min	6.167 ns
max	7.493 ns
sdev	234.77 ps
num	732
status	V
histo	A DECK

*Quickly measure channel properties with measurement parameters defined by the FlexRay specification. LeCroy's statistical measurements with histograms, tracks and trends let you see how the channel behaves over time.* 

## Convenient Table Display Summarizes Results

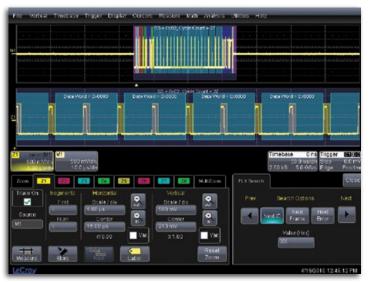

Turn your oscilloscope into a protocol analyzer with the Table display of decoded information. Custom configure the Table to display only the information you want and export Table data to an Excel file. Touch a message in the table and automatically zoom for detail.

Display your values in an easy-to-understand table. Touch a row to zoom, or export to Excel with one button push.

## Search and Zoom

ID or Data values can be quickly located by searching for a specific value. In a long acquisition, pressing NEXT advances the single byte to the byte right or left of the current message.

Search through long record of decoded data by entering the message or address you are looking for and clicking the right or left search arrows.

## More Tools for Your Embedded System Test

LeCroy offers the same powerful triggering and intuitive decoding capabilities for I<sup>2</sup>C, SPI, UART, RS-232, Audiobus (I<sup>2</sup>S, LJ, RJ, TDM), CAN, LIN, FlexRay,™ MIL-STD-1553) signals. For complete embedded system testing, the MS-250 and MS-500 adds 18 or 36 digital channels to the digital oscilloscope allowing you to look at all your analog, digital, and serial data waveforms simultaneously with complete analog/digital cross pattern triggering.

## **SPECIFICATIONS AND ORDERING INFORMATION**

	FlexRaybus TDP
Definition	
Protocol Setup	Select Bitrate (2.5, 5 or 10 Mb/s). Select FlexRay Channel A or Channel B
Decode Capability	·
Format	All decoding is hexadecimal except for Cycle Count which is decoded using a decimal format
Decode Setup	Two threshold definitions required. Default is to Percent amplitude. Select Bitrate. Select FlexRay Channel A or Channel B
Decode Input	Any analog Channel, Memory or Math trace
# of Decode Waveforms	Up to 4 buses may be decoded at one time. In addition, zooms can be displayed (with decoded information)
Location	Overlaid over DATA waveform, on Grid. (Note: Use multi-grid if there is more than one decoder ON)
Visual Aid	Color Coding for TSS, FSS, Frame Qualifiers, Slot ID, Payload Length, Header CRC, Cycle Count, Data, BSS, Payload CRC and FES Decode information is intelligently annotated based on timebase setting
Trigger Capability	
Format	Hexadecimal or Binary for Frame ID Decimal for Cycle Count
Trigger Setup	Trigger on TSS (Start), Frame ID, Cycle Count, Symbols and Errors Symbols: Channel Idle Delimiter (CID) Symbol, Collision Avoidance Symbol (CAS), Media Access Test Symbol (MTS), Wakeup Pattern (WUP) Errors: Frame Start Sequence (FSS) Error – triggers when the logic high time between the TSS and the first byte is too long Byte Start Sequence (BSS) Error – triggers anytime the BSS pattern is not seen between bytes where expected Frame End Sequence (FES) Error – triggers when the FS is not seen after the last byte
Frame ID and Cycle Count Condition Setup	$\leq$ , <, =, >, $\geq$ , in range, out of range, don't care
DATA Setup	Hexadecimal: # Data Bytes = 0 to 8. Data can be defined by nibble. Triggers on that data pattern regardless of position or in user settable location Binary: Any combination of 0,1, or X for 1-64 bits. Triggers on that data pattern regardless of position or in user settable location
Bitrates	2.5, 5.0 or 10 Mb/s selectable
Trigger Input	Any analog Channel or the EXT input
Trigger Design	Internal to oscilloscope, settable like any other oscilloscope trigger
Physical Layer Test	
Eye Diagram	Eye diagram creation with mask testing at TP1 and TP4. Mask testing allows for 'Stop on Failure'
Format	Propagation Delay, Asymmetric Delay, Truncation, Jitter
Search Capability	
Pattern Search	Search by Next ID, Next Frame, or Next Error in Hexadecimal formats
	FlexRaybus TD Includes all Decode, Trigger and Search functionality described in FlexRaybus TDP, no Physical Layer Test included

Customer Service LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year. This warranty includes: • No charge for return shipping • Long-term 7-year support • Upgrade to latest software at no charge
