

## Comparison of changes European PowerTOP-Plugs 16 and 32A

Page 1 of 1  
29/04/2003

The changes concern only the corresponding front part of the plug.

The internal construction with insert and holding plate made of red brown material will be dropped. Instead, a front part of the plug with clicked contact pins, completely made of high heat resistant material is used (colour grey).

Advantages:

Complete front part of the plug made of high valued material, better accessibility of the terminals, universal contact screws.
