Direct Operated 2 Port Solenoid Valve New

Medium vacuum

Water

Oil

(New VX

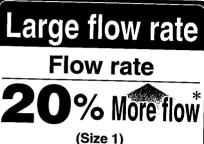

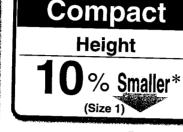

Steam * Can be used with

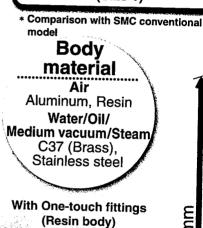

RoHS

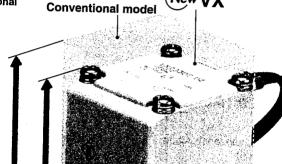

68 mm

Enclosure

IP65*

* Electrical entry Flat terminal type terminal is IP40.

Power consumption 4.5 W (Size 1)

7 w (Size 2) 10.5 w (Size 3) (DC/N.C. valve)

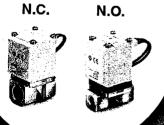

Manifold

- Material Body/PPS
 - Base/Aluminum
 - Seal/NBR, FKM

Solenoid coil type

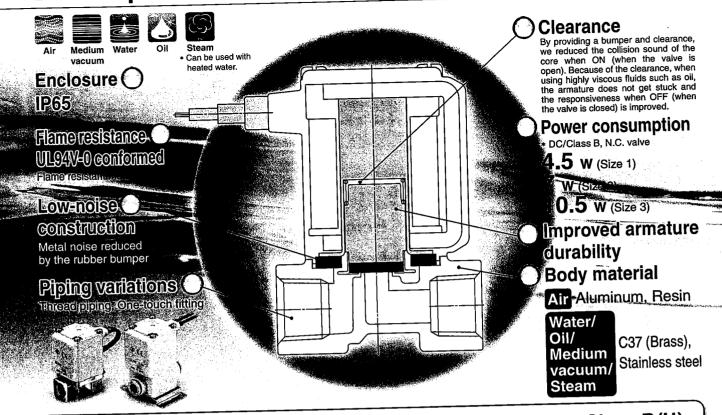

Series VX21/22/23

Direct Operated 2 Port Solenoid Valve

Specially constructed to improve the OFF response when operated with a higher viscosity fluid such as oil.

O Low-noise construction Specially constructed to reduce the metal noise during operation.

Full-wave rectifier type (AC specification: Insulation type Class B/H) O Improved OFF response

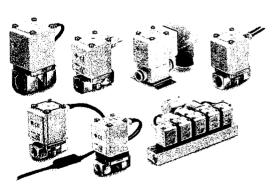

- () Improved durability Service life is extended by the special construction. (compared with current shading coil)
- Reduced buzz noise Rectified to DC by the full-wave rectifier, resulting in a buzz noise reduction.
- Reduced apparent power * Class B, N.C. valve 10 VA→**7** VA (Size 1) 20 VA→**9.5** VA (Size 2) 32 VA → 12 VA (Size 3)

Valve	Body material		Aluminum, Resin, C37 (Brass), Stainless steel
specifications	Seal material Note 3)		NBR, FKM
	Enclosure		Dust-tight, Water-jet-proof type (IP65) Note 1)
	Environment		Location without corrosive or explosive gases
į	Rated voltage AC DC		100 VAC, 200 VAC, 110 VAC, 230 VAC, (220 VAC, 240 VAC, 48 VAC, 24 VAC) Note 2)
			24 VDC, (12 VDC) Note 2)
Coil	Allowable voltage fluctua	ition	±10% of rated voltage
specifications	Allowable leakage AC		5% or less of rated voltage
	voltage DC		2% or less of rated voltage
Coil insulation type			Class B, Class H

Note 1) Electrical entry flat terminal type terminal is IP40.

Note 2) Voltage in () indicates special voltage. (Refer to page 21.)

Note 3) For seal material/EPDM, refer to X332. (Refer to page 23.)

⚠ Be sure to read "Specific Product Precautions" before handling.

Solenoid Coil Specifications

Normally Closed (N.C.)

DC Specification

Class B

Size	Power consumption (W) Note 1)	Temperature rise (°C) Note 2)
Size 1	4.5	50
Size 2	7	55
Size 3	10.5	65

Class H

Size	Power consumption (W) Note 1)	Temperature rise (°C) Note 2)
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Power consumption: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

AC Specification (Built-in Full-wave Rectifier Type) Class B

Size	Apparent power (VA) Note 1) 2)	Temperature rise (°C) Note 3)
Size 1	7	60
Size 2	9.5	70
Size 3	12	70

Class H

Size	Apparent power (VA) Note 1) 2)	Temperature rise (°C) Note 3)
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Apparent power: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

Note 3) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

Normally Open (N.O.) DC Specification

Class B

Size	Power consumption (W) Note 1)	Temperature rise (°C) Note 2)
Size 1	7.5	60
Size 2	8.5	70
Size 3	12.5	70

Class H

Size	Power consumption (W) Note 1)	Temperature rise (°C) Note 2)
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Power consumption: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

AC Specification (Built-in Full-wave Rectifier Type) Class B

Size	Apparent power (VA) Note 1) 2)	Temperature rise (°C) Note 3)
Size 1	9	60
Size 2	10	70
Size 3	14	70

Class H

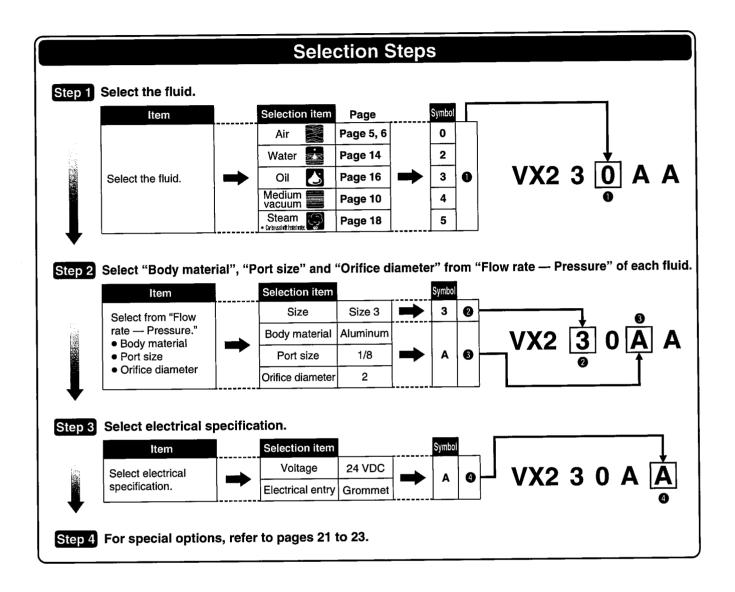

Size	Apparent power (VA) Note 1) 2)	Temperature rise (°C) Note 3)
Size 1	9	100
Size 2	12	100
Size 3	15	100

Note 1) Apparent power: The value at ambient temperature of 20°C and when the rated voltage is applied. (Variation: ±10%)

Note 2) There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

Note 3) The value at ambient temperature of 20°C and when the rated voltage is applied. The value depends on the ambient environment. This is for reference.

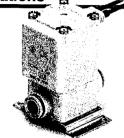

Series VX21/22/23 Selection Steps

Model/Valve Specifications

N.C.

Symbol

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

How to Order Manifold Assembly (Example)

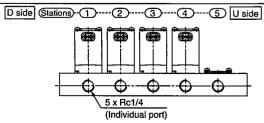

Other voltages

Enter the valve and blanking plate to be mounted under the manifold base part number.

<Example>

VVX210B051	
*VX2A0AA4	
*VVX021S-4A-N1	

"*" is the symbol for mounting. Add an "*" in front of the part numbers for solenoid valves etc. to be mounted.

Enter the product's part number in order, counting the 1st station from the D side (left in the manifold arrangement, when viewing the individual port in front).

DIN terminal with light

Without DIN connector

Conduit terminal with light

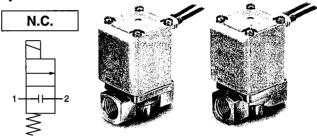

* This valve can also be used with air or water. (Refer to the valve specifications for air or water.)

The kinematic viscosity must not exceed 50 mm²/s. The special construction of the armature adopted in the built-in full-wave rectifier type gives an improvement in OFF response by providing clearance on the absorbed surface when it is switched ON.

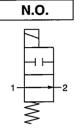

Model/Valve Specifications

Symbol

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

* This valve can also be used with air, water, oil or heated water. (Refer to the valve specifications for air, water or oil.)

Model/Valve Specifications

When the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

Normally Closed (N.C.)

- *1 Bracket is attached as standard with the resin body, so there are no XB settings.
- *2 When the orifice is ø8, ø10, and the body port size is 1/4 or 3/8, use a foot type bracket. (The L-bracket of the old VX series is not compatible.) If the body port size is 1/2, there are no XB settings. (Refer to the following.)
- *3 On the bottom side of the standard body, there is no female thread for mounting a bracket. Please be careful because the bracket cannot be retrofit.
- *4 Bracket is packed in the same container as the main body.

 Lead Wire Assembly for Flat Terminal (Set of 2 pcs.)

VX021S-1-16FB

• Bracket Assembly Part No. (for Metal Body)

- * 2 mounting screws are shipped together with the bracket assembly.
- * On the bottom side of the standard body, there is no female thread for mounting a bracket. Please select XNB□.

Series VX21/22/23 Glossary of Terms

Pressure Terminology

1. Maximum operating pressure differential

The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

2. Minimum operating pressure differential

The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve fully open.

3. Maximum system pressure

The maximum pressure that can be applied inside the pipelines (line pressure).

[The pressure differential of the solenoid valve portion must not exceed the maximum operating pressure differential.]

4. Withstand pressure

The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. [value under the prescribed conditions]

Electrical Terminology

1. Apparent power (VA)

Volt-ampere is the product of voltage (V) and current (A). Power consumption (W): For AC, $W = V \cdot A \cdot \cos \theta$. For DC, $W = V \cdot A$.

Note) $\cos \theta$ shows power factor. $\cos \theta \approx 0.9$

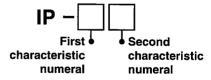

2. Surge voltage

A high voltage which is momentarily generated by shutting off the power in the shut-off area.

3. Degree of protection

A degree defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects."

Verify the degree of protection for each product.

●First Characteristics:

Degrees of protection against solid foreign objects

	egices of protection against solid foreign objects
0	Non-protected
1	Protected against solid foreign objects of 50 mmø and greater
2	
3	Protected against solid foreign objects of 2.5 mmø and greater
4	Protected against solid foreign objects of 1.0 mmø and greater
5	Dust-protected
6	Dust-tight

Electrical Terminology

Second Characteristics:

Degrees of protection against water

0	Non-protected	_
1	Protected against vertically falling water drops	Dripproof type 1
2	Protected against vertically falling water drops when enclosure tilted up to 15°	Dripproof type 2
3	Protected against rainfall when enclosure tilted up to 60°	Rainproof type
4	Protected against splashing water	Splashproof type
5	Protected against water jets	Water-jet-proof type
6	Protected against powerful water jets	Powerful water-jet-proof type
7	Protected against the effects of temporary immersion in water	Immersible type
8	Protected against the effects of continuous immersion in water	Submersible type

Example) IP65: Dust-tight, Water-jet-proof type

"Water-jet-proof type" means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.

Others

1. Material

NBR: Nitrile rubber FKM: Fluororubber

EPDM: Ethylene propylene rubber

2. Oil-free treatment

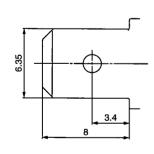

The degreasing and washing of wetted parts

3. Symbol

In the symbol $(\sqrt{1111}M)$, when the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.

Flat terminal/Electrical connection size of molded coil

Solenoid Valve Flow-rate Characteristics

(How to indicate flow-rate characteristics)

1. Indication of flow-rate characteristics

The flow-rate characteristics in equipment such as a solenoid valve etc. are indicated in their specifications as shown in Table (1).

Table (1) Indication of Flow-rate Characteristics

Corresponding equipment	Indication by international standard	Other indications	Conformed standard
Pneumatic equipment	C, b	_	ISO 6358: 1989 JIS B 8390: 2000
	_	s	JIS B 8390: 2000 Equipment: JIS B 8373, 8374, 8375, 8379, 8381
		Cv	ANSI/(NFPA)T3.21.3: 1990
Process fluid	Av	_	IEC60534-2-3: 1997 JIS B 2005: 1995
control equipment	_	Cv	Equipment: JIS B 8471, 8472, 8473

2. Pneumatic equipment

- 2.1 Indication according to the international standards
- (1) Conformed standard
 - ISO 6358: 1989 : Pneumatic fluid power—Components using compressible fluids—
 - **Determination of flow-rate characteristics**
 - JIS B 8390: 2000 : Pneumatic fluid power—Components using compressible fluids—
 - How to test flow-rate characteristics
- (2) Definition of flow-rate characteristics
 - The flow-rate characteristics are indicated as a result of a comparison between sonic conductance $oldsymbol{\mathcal{C}}$ and critical pressure ratio b.
 - Sonic conductance C
- : Value which divides the passing mass flow rate of an equipment in a choked flow condition by the product of the upstream absolute pressure and the density in a
- standard condition.
- Critical pressure ratio **b**: Pressure ratio (downstream pressure/upstream pressure) which will turn to a choked flow when the value is smaller than this ratio.
- Choked flow
- : The flow in which the upstream pressure is higher than the downstream pressure and
 - where sonic speed in a certain part of an equipment is reached.
- Gaseous mass flow rate is in proportion to the upstream pressure and not dependent
- on the downstream pressure.
- Subsonic flow Standard condition
- : Flow greater than the critical pressure ratio
- : Air in a temperature state of 20°C, absolute pressure 0.1 MPa (= 100 kPa = 1 bar),
 - relative humidity 65%.
 - It is stipulated by adding the "(ANR)" after the unit depicting air volume.
 - (standard reference atmosphere)
 - Conformed standard: ISO 8778: 1990 Pneumatic fluid power—Standard reference atmosphere, JIS B 8393: 2000: Pneumatic fluid power—Standard reference atmosphere
- (3) Formula for flow rate
 - It is described by the practical units as following.

When
$$\frac{P_{2}+0.1}{P_{1}+0.1} \le b$$
, choked flow

$$Q = 600 \times C (P_1 + 0.1) \sqrt{\frac{293}{273 + t}}$$
....(1

When
$$\frac{P_{2}+0.1}{P_{1}+0.1} > b$$
, subsonic flow

$$\mathbf{Q} = 600 \times \mathbf{C} (\mathbf{P}_1 + 0.1) \sqrt{1 - \left[\frac{\mathbf{P}_2 + 0.1}{\mathbf{P}_1 + 0.1} - \mathbf{b} \right]^2 \sqrt{\frac{293}{273 + \mathbf{t}}}}$$
 (2)

Q: Air flow rate [dm³/min (ANR)], dm³ (Cubic decimeter) of SI unit are also allowed to be described by L (liter). $1 \, dm^3 = 1 \, L$

Solenoid Valve Flow-rate Characteristics Series VX21/22/23

C: Sonic conductance [dm3/(s·bar)]

b : Critical pressure ratio [—]P₁ : Upstream pressure [MPa]

P2: Downstream pressure [MPa]

t : Temperature [°C]

Note) Formula of subsonic flow is the elliptic analogous curve.

Flow-rate characteristics are shown in Graph (1) For details, please make use of SMC's "Energy Saving Program."

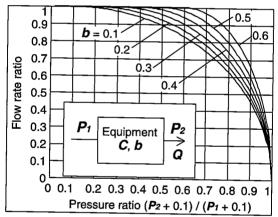

Example)

Obtain the air flow rate for $P_1 = 0.4$ [MPa], $P_2 = 0.3$ [MPa], t = 20 [°C] when a solenoid valve is performed in C = 2 [dm³/(s·bar)] and b = 0.3.

According to formula 1, the maximum flow rate = $600 \times 2 \times (0.4 + 0.1) \times \sqrt{\frac{293}{273 + 20}} = 600 \text{ [dm}^3/\text{min (ANR)]}$

Pressure ratio =
$$\frac{0.3 + 0.1}{0.4 + 0.1}$$
 = 0.8

Based on Graph (1), the flow rate will be 0.7 when the pressure ratio is 0.8 and $\boldsymbol{b} = 0.3$. Hence, flow rate = Maximum flow rate x flow rate ratio = $600 \times 0.7 = 420 \text{ [dm}^3/\text{min (ANR)]}$

(4) Test method

Graph (1) Flow-rate characteristics

Attach a test equipment with the test circuit shown in Fig. (1) while maintaining the upstream pressure to a certain level which does not go below 0.3 MPa. Next, measure the maximum flow to be saturated in the first place, then measure this flow rate at 80%, 60%, 40%, 20% and the upstream and downstream pressure. And then, obtain the sonic conductance \boldsymbol{C} from this maximum flow rate. Besides that, substitute each data of others for the subsonic flow formula to find \boldsymbol{b} , then obtain the critical pressure ratio \boldsymbol{b} from that average.

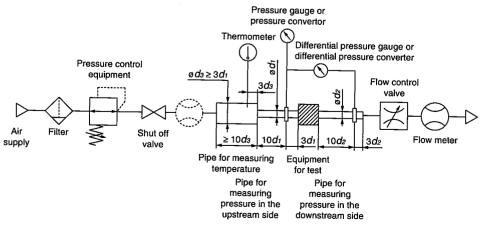

Fig. (1) Test circuit based on ISO 6358, JIS B 8390

2.2 Effective area S

(1) Conformed standard

JIS B 8390: 2000: Pneumatic fluid power—Components using compressible fluids—

Determination of flow rate characteristics

Equipment standards: JIS B 8373: 2 port solenoid valve for pneumatics

JIS B 8374: 3 port solenoid valve for pneumatics

JIS B 8375: 4 port, 5 port solenoid valve for pneumatics

JIS B 8379: Silencer for pneumatics

JIS B 8381: Fittings of flexible joint for pneumatics

(2) Definition of flow-rate characteristics

Effective area S: The cross-sectional area having an ideal throttle without friction deduced from the calculation of the pressure changes inside an air tank or without reduced flow when discharging the compressed air in a choked flow, from an equipment attached to the air tank. This is the same concept representing the "easy to run through" as sonic conductance C.

(3) Formula for flow rate

When
$$\frac{P_2 + 0.1}{P_1 + 0.1} \le 0.5$$
, choked flow

$$Q = 120 \times S(P_1 + 0.1) \sqrt{\frac{293}{273 + t}}$$
(3)

When
$$\frac{P_{2} + 0.1}{P_{1} + 0.1} > 0.5$$
, subsonic flow

$$Q = 240 \times S \sqrt{(P_2 + 0.1)(P_1 - P_2)} \sqrt{\frac{293}{273 + t}}$$
(4)

Conversion with sonic conductance \boldsymbol{C} :

 $S = 5.0 \times C$ (5)

Q : Air flow rate[dm³/min(ANR)], dm³ (cubic decimeter) of SI unit are also allowed to be described by L (liter) $1 \text{ dm}^3 = 1 \text{ L}$

S: Effective area [mm2]

P1: Upstream pressure [MPa]

P2: Downstream pressure [MPa]

t: Temperature [°C]

Note) Formula for subsonic flow (4) is only applicable when the critical pressure ratio \boldsymbol{b} is the unknown equipment. In the formula (2) by the sonic conductance C, it is the same formula as when b = 0.5.

(4) Test method

Attach a test equipment with the test circuit shown in Fig. (2) in order to discharge air into the atmosphere until the pressure inside the air tank goes down to 0.25 MPa (0.2 MPa) from an air tank filled with the compressed air at a certain pressure level (0.5 MPa) which does not go below 0.6 MPa. At this time, measure the discharging time and the residual pressure inside the air tank which had been left until it turned to be the normal values to determine the effective area S, using the following formula. The volume of an air tank should be selected within the specified range by corresponding to the effective area of an equipment for test. In the case of JIS B 8373, 8374, 8375, 8379, 8381, the pressure values are in parentheses and the coefficient of the formula is 12.9.

 $S = 12.1 \frac{V}{t} \log_{10} \left(\frac{Ps + 0.1}{P + 0.1} \right) \sqrt{\frac{293}{T}} \dots (6)$ S : Effective area [mm²]

V: Air tank capacity [dm3]

t : Discharging time [s]

Ps: Pressure inside air tank before discharging [MPa]

: Residual pressure inside air tank after discharging [MPa]

: Temperature inside air tank before discharging [K]

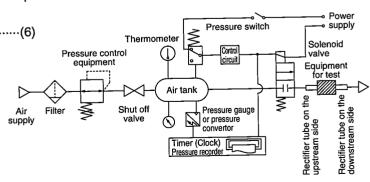

Fig. (2) Test circuit based on JIS B 8390

2.3 Flow coefficient CV factor

The United States Standard ANSI/(NFPA)T3.21.3: 1990: Pneumatic fluid power—Flow rating test procedure and reporting method for fixed orifice components

Defines the **Cv** factor of flow coefficient by the following formula which is based on the test conducted by the test circuit analogous to ISO 6358.

$$Cv = \frac{Q}{114.5\sqrt{\frac{\Delta P (P_2 + P_a)}{T_1}}}$$
 (7)

 ΔP : Pressure drop between the static pressure tapping ports [bar]

P1: Pressure of the upstream tapping port [bar gauge]

 P_2 : Pressure of the downstream tapping port [bar gauge]: $P_2 = P_1 - \Delta P$

Q : Flow rate [dm³/s standard condition]
 Pa : Atmospheric pressure [bar absolute]
 T1 : Upstream absolute temperature [K]

Test conditions are $< P_1 + P_2 = 6.5 \pm 0.2$ bar absolute, $T_1 = 297 \pm 5$ K, 0.07 bar $\le \Delta P \le 0.14$ bar.

This is the same concept as effective area \boldsymbol{A} which ISO 6358 stipulates as being applicable only when the pressure drop is smaller than the upstream pressure and the compression of air does not become a problem.

3. Process fluid control equipment

(1) Conformed standard

IEC60534-2-3: 1997: Industrial process control valves. Part 2: Flow capacity, Section Three-Test procedures

JIS B 2005: 1995: Test method for the flow coefficient of a valve Equipment standards: JIS B 8471: Solenoid valve for water

JIS B 8472: Solenoid valve for steam

JIS B 8473: Solenoid valve for fuel oil

(2) Definition of flow-rate characteristics

Av factor: Value of the clean water flow rate represented by m³/s which runs through a valve (equipment for test) when the pressure difference is 1 Pa. It is calculated using the following formula.

$$\mathbf{A}\mathbf{v} = \mathbf{Q}\sqrt{\frac{\rho}{\Delta \mathbf{P}}}$$
 (8)

Av: Flow coefficient [m²]

Q: Flow rate [m³/s]

Δ**P**: Pressure difference [Pa] ρ: Fluid density [kg/m³]

(3) Formula of flow rate

It is described by the practical units. Also, the flow-rate characteristics are shown in Graph (2). In the case of liquid:

$$Q = 1.9 \times 10^6 Av \sqrt{\frac{\Delta P}{G}}$$
 (9)

Q: Flow rate [L/min]

Av: Flow coefficient [m2]

Δ**P**: Pressure difference [MPa]

G: Relative density [water = 1]

In the case of saturated aqueous vapor:

$$Q = 8.3 \times 10^6 Av \sqrt{\Delta P(P_2 + 0.1)}$$
(10)

Q: Flow rate [kg/h]

Av: Flow coefficient [m2]

 ΔP : Pressure difference [MPa]

 P_1 : Upstream pressure [MPa]: $\Delta P = P_1 - P_2$

P₂: Downstream pressure [MPa]

Conversion of flow coefficient:

 $Av = 28 \times 10^{-6} Kv = 24 \times 10^{-6} Cv$ (11)

Here.

Kv factor

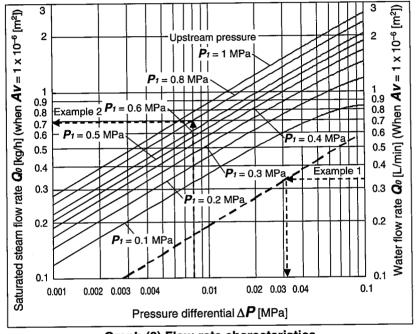

: Value of the clean water flow rate represented by m³/h which runs through a valve

at 5 to 40°C, when the pressure difference is 1 bar.

Cv factor (Reference values): Figures representing the flow rate of clean water by US gal/min which runs

through a valve at 60°F, when the pressure difference is 1 lbf/in² (psi).

Value is different from **Kv** and **Cv** factors for pneumatic purpose due to different test method.

Graph (2) Flow-rate characteristics

Example 1)

Obtain the pressure difference when water 15 [L/min] runs through a solenoid valve with an $\mathbf{A}\mathbf{v} = 45 \times 10^{-6}$ [m²]. Since $\mathbf{Q}_0 = 15/45 = 0.33$ [L/min], according to Graph (2), if reading $\Delta \mathbf{P}$ when \mathbf{Q}_0 is 0.33, it will be 0.031 [MPa].

Example 2)

Obtain the saturated steam flow rate when $P_1 = 0.8$ [MPa], $\Delta P = 0.008$ [MPa] with a solenoid valve with an $Av = 1.5 \times 10^{-6}$ [m²].

According to Graph (2), if reading \mathbf{Q}_0 when \mathbf{P}_1 is 0.8 and $\Delta \mathbf{P}$ is 0.008, it is 0.7 [kg/h]. Hence, the flow rate $\mathbf{Q} = 0.7 \times 1.5 = 1.05$ [kg/h].

(4) Test method

Attach a test equipment with the test circuit shown in Fig. (3). Next, pour water at 5 to 40° C, then measure the flow rate with a pressure difference of 0.075 MPa. However, the pressure difference needs to be set with a large enough difference so that the Reynolds number does not go below a range of 4×10^4 .

By substituting the measurement results for formula (8) to figure out Av.

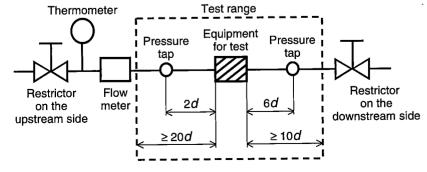

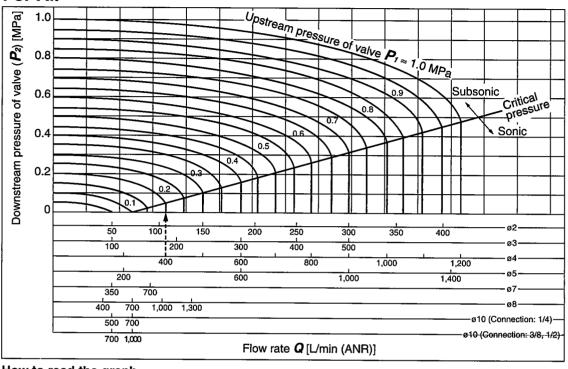

Fig. (3) Test circuit based on IEC60534-2-3, JIS B 2005

Flow-rate Characteristics 1

Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 38 through to 42.

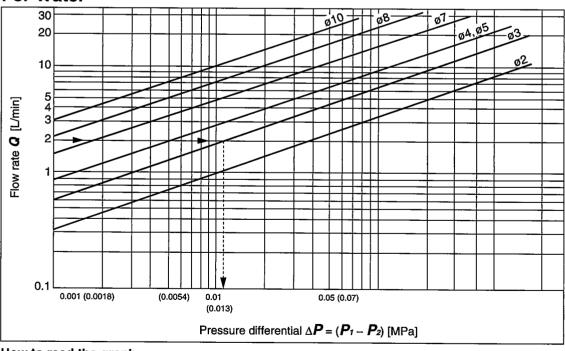

For Air

How to read the graph

The sonic range pressure to generate a flow rate of 400 L/min (ANR) is P₁ ≈ 0.2 MPa for a ø4 orifice and P₁ ≈ 0.58 MPa for a ø3 orifice.

For Water

How to read the graph

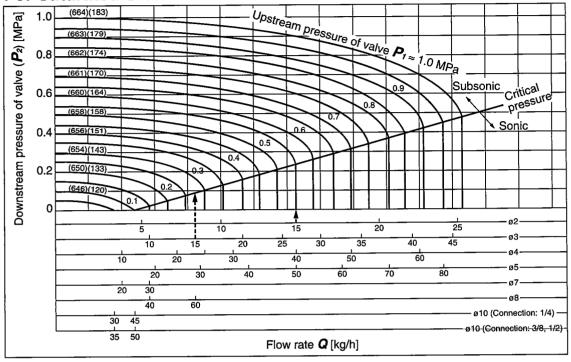

When a water flow of 2 L/min is generated, $\Delta P \approx 0.013$ MPa for a valve with ø3 orifice.

Flow-rate Characteristics 2

Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 38 through to 42.

For Saturated Steam

How to read the graph

The sonic range pressure to generate a flow rate of 15 kg/h is $P_1 \approx 0.55$ MPa for a ø2 orifice and $P_1 \approx 0.28$ MPa for a ø3 orifice. The amount of potential heat varies somewhat based on the pressure P_1 . At 15 kg/h, there will be approximately 9700 kcal/h of heat.

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Design

1. Cannot be used as an emergency shutoff valve etc.

The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. Extended periods of continuous energization

The solenoid coil will generate heat when continuously energized. Avoid using in a tightly shut container. Install it in a well ventilated area. Furthermore, do not touch it while it is being energized or right after it is energized.

3. Liquid rings

In cases with a flowing liquid, provide a bypass valve in the system to prevent the liquid from entering the liquid seal circuit.

4. Actuator drive

When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent potential danger caused by actuator operation.

5. Pressure (including vacuum) holding

It is not usable for an application such as holding the pressure (including vacuum) inside of a pressure vessel because air leakage is entailed in a valve.

- 6. When the conduit type is used as equivalent to an IP65 enclosure, install a wiring conduit etc.
- When an impact, such as water hammer etc., caused by the rapid pressure fluctuation is applied, the solenoid valve may be damaged. Give an attention to it.

Selection

▲Warning

1. Fluid

1) Type of fluid

Before using a fluid, check whether it is compatible with the materials of each model by referring to the fluids listed in this catalog. Use a fluid with a kinematic viscosity of 50 mm²/s or less. If there is something you do not know, please contact SMC.

2) Flammable oil, Gas

Check the specifications for leakage in the interior and/or exterior area.

3) Corrosive gas

Cannot be used since it will lead to cracks by stress corrosion or result in other incidents.

- 4) When a brass body is used, then depending on water quality, corrosion and internal leakage may occur. If such abnormalities occur, exchange the product for a stainless steel body.
- 5) Use an oil-free specification when any oily particle must not enter the passage.
- 6) Applicable fluid on the list may not be used depending on the operating condition. Give adequate confirmation, and then determine a model, just because the compatibility list shows the general case.

Selection

▲Warning

2. Fluid quality

<Air>

1) Use clean air.

Do not use compressed air that contains chemicals, synthetic oils including organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

2) Install an air filter.

Install air filters close to the valves on the upstream side. A filtration degree of 5 μm or less should be selected.

3) Install an aftercooler or air dryer, etc.

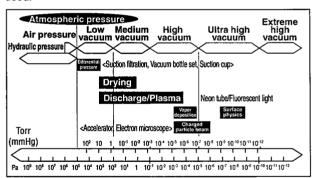

Compressed air that contains excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler or air dryer, etc.

4) If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves. If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Refer to Best Pneumatics No.5 for further details on compressed air quality.

<Vacuum>

Please be aware that there is a range of pressure that can be used.

Vacuum piping direction: if the system uses a vacuum pump, we ask that you install the vacuum pump on the secondary side.

Also, install a filter on the primary side, and be careful that no foreign object is picked up.

Please replace the valve after operating the device approximately 300,000 times.

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Selection

△ Warning

<Water>

The use of a fluid that contains foreign objects can cause problems such as malfunction and seal failure by promoting wear of the valve seat and armature and by sticking to the sliding parts of the armature etc. Install a suitable filter (strainer) immediately upstream from the valve. As a general rule, use 100 mesh.

The supply water includes materials that create a hard sediment or sludge such as calcium and magnesium. Since this scale and sludge can cause the valve to malfunction, install water softening equipment, and a filter (strainer) directly upstream from the valve to remove these substances.

Tap water pressure:

The water pressure for tap water is normally 0.4 MPa or less. However, in places like a high-rise building, the pressure may be 1.0 MPa. When selecting tap water, be careful of the maximum operating pressure differential.

When using water or heated water, poor operation or leaks may be caused by dezincification, erosion, corrosion, etc. The brass (C37) body of this product uses dezincification resistant material as a standard. We also offer a stainless steel body type with improved corrosion resistance. Please use the one that fits your needs.

<0il>

Generally, FKM is used as seal material, as it is resistant to oil. The resistance of the seal material may deteriorate depending on the type of oil, manufacturer or additives. Check the resistance before using. The kinematic viscosity must not exceed 50 mm²/s.

<Steam>

The use of a steam that contains foreign objects can cause problems such as malfunction and seal failure by promoting wear of the valve seat and armature, and by sticking to the sliding parts of the armature etc. Install a suitable filter (strainer) immediately upstream from the valve.

As a standard, the mesh count for the strainer is 100 mesh. However, the size and shape of foreign objects that occur depends on the operating environment. Check the fluid status and choose an appropriate mesh count.

The supply water to a boiler includes materials that create a hard sediment or sludge such as calcium and magnesium. Sediment and sludge from steam can cause the valve to not operate properly. Install a water softening device, which removes these materials. Do not use operation steam which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as these can cause damage or deterioration.

3. Ambient environment

Use within the operable ambient temperature range. Check the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

4. Countermeasures against static electricity

Take measures to prevent static electricity since some fluids can cause static electricity.

Selection

.↑Warning

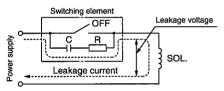

5. Low temperature operation

- 1) The valve can be used in an ambient temperature of between -20 to -10°C. However, take measures to prevent freezing or solidification of impurities, etc.
- 2) When using valves for water application in cold climates, take appropriate countermeasures to prevent the water from freezing in tubing after cutting the water supply from the pump, by draining the water etc. When warming by a heater etc., be careful not to expose the coil portion to a heater. Installation of a dryer, heat retaining of the body is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, and the high flow runs.

∧ Caution

1. Leakage voltage

Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

AC coil: 5% or less of rated voltage DC coil: 2% or less of rated voltage

2. Selecting model

Material depends on fluid. Select optimal models for the fluid.

3. When the fluid is oil.

The kinematic viscosity must not exceed 50 mm²/s.

Mounting

**** Marning

1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

2. Do not apply external force to the coil section.

When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.

3. Mount a valve with its coil position upward, not downward.

When mounting a valve with its coil positioned downward, foreign objects in the fluid will adhere to the iron core leading to a malfunction. Especially for strict leakage control, such as with vacuum applications and non-leak specifications, the coil must be positioned upward.

4. Do not warm the coil assembly with a heat insulator

Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the coil to burn out.

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Mounting

⚠ Warning

- 5. Secure with brackets, except in the case of steel piping and copper fittings.
- Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.

7. Painting and coating

Warnings or specifications printed or labeled on the product should not be erased, removed or covered up.

Disassembly/Assembly Procedures

⚠ Caution

1. Before starting the disassembly work, be sure to shut off the power supply and pressure supply, and then release the residual pressure.

Disassembly

<N.C.>

1) Loosen the mounting screws.

The coil assembly, seal, return spring, armature assembly and body can be removed.

<N.O.>

1) Loosen the mounting screws.

The coil assembly, push rod assembly, O-rings, adapter and body can be removed.

Assembly

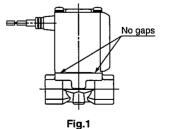

<Common to N.C. and N.O.>

- 1) Mount the components on the body in the reverse order of disassembly.
- 2) When changing the electrical entry direction, turn the coil assembly in a desired direction to mount it.
- 3) Push the coil assembly against the body and tighten the screws two or more rounds diagonally (Fig. 2) in the status that there are no gaps between the coil assembly and body (Fig. 1).

Tighten the screws in the order of " $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1 \rightarrow 2 \rightarrow 3 \rightarrow 4$ ".

Proper Tightening Torque (N·m)

· · · · · · · · · · · · · · · · · · ·

VX22	0.7	
VX23	0.7	

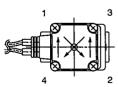

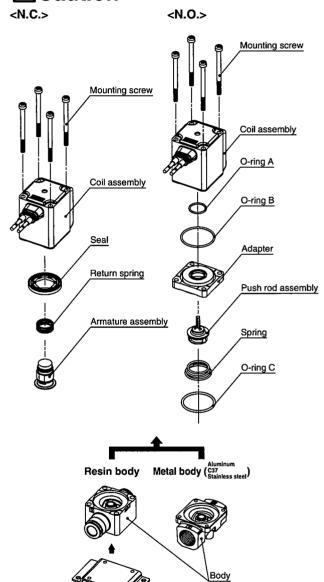

Fig.2

- * After tightening the screws, make sure that there are no gaps between the coil and body (Fig. 1).
- * After the disassembly and assembly have been completed, make sure that no leak occurs from the seal. Additionally, when restarting the valve, make sure that the valve operates correctly after checking the safety.

Disassembly/Assembly Procedures

⚠ Caution

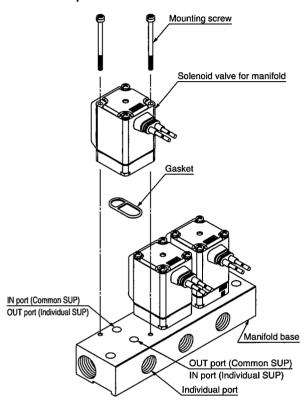

Be sure to read this before handling.

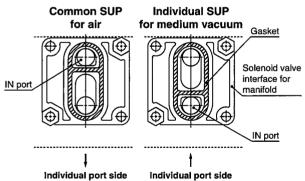

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Disassembly/Assembly Procedures

⚠ Caution

Manifold Exploded View

- * Mounting orientation exists when mounting valves onto manifold base. Mount it as shown above.
- * Take great care when special electrical entry direction (XC) is used.

Piping

△Warning

1. During use, deterioration of the tube or damage to the fittings could cause tubes to come loose from their fittings and thrash about.

To prevent uncontrolled tube movement, install protective covers or fasten tubes securely in place.

2. For piping the tube, fix the product securely using the mounting holes so that the product is not in the air.

⚠ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe. Avoid pulling, compressing, or bending the valve body when piping.

- 2. Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.
- 3. Always tighten threads with the proper tightening torque.

When using steel piping, tighten with the proper tightening torque shown below.

Lower tightening torque will lead into fluid leakage.

Tightening Torque for Piping

Thread size	Proper tightening torque (N·m)
Rc1/8	7 to 9
Rc1/4	12 to 14
Rc3/8	22 to 24
Rc1/2	28 to 30

4. Connection of piping to products

When connecting piping to a product, avoid mistakes regarding the supply port etc.

5. Wrapping of sealant tape

When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve.

Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

 In applications such as vacuum and non-leak specifications, use caution specifically against the contamination of foreign objects or airtightness of the fittings.

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Recommended Piping Conditions

1. When connecting tubes using One-touch fittings, provide some spare tube length shown in Fig. 1, recommended piping configuration.

Also, do not apply external force to the fittings when binding tubes with bands etc. (see Fig. 2.)

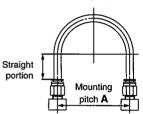

Fig. 1 Recommended piping configuration

Unit: mm

Tube	Mounting pitch A			Straight
size	Nylon tubing	Soft nylon tubing	Polyurethane tubing	portion length
ø1/8"	44 or more	29 or more	25 or more	16 or more
ø6	84 or more	39 or more	39 or more	30 or more
ø1/4"	89 or more	56 or more	57 or more	32 or more
ø8	112 or more	58 or more	52 or more	40 or more
ø10	140 or more	70 or more	69 or more	50 or more
ø12	168 or more	82 or more	88 or more	60 or more

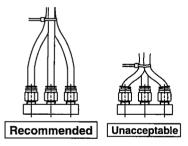

Fig. 2 Binding tubes with bands

Wiring

⚠Warning

 Do not apply AC voltage to Class "H" coil AC type unless it is built in full-wave rectifier, or the coil will be damaged.

∧ Caution

- As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm² for wiring.
 Furthermore, do not allow excessive force to be applied to the lines.
- 2. Use electrical circuits which do not generate chattering in their contacts.
- 3. Use voltage which is within ±10% of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within ±5% of the rated value. The voltage drop is the value in the lead wire section connecting the coil.
- 4. When a surge from the solenoid affects the electrical circuitry, install a surge voltage suppressor etc., in parallel with the solenoid. Or, adopt an option that comes with the surge voltage protection circuit. (However, a surge voltage occurs even if the surge voltage protection circuit is used. For details, please consult with SMC.)

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

Operating Environment

⚠ Warning

- 1. Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water steam, or where there is direct contact with any of these.
- 2. Do not use in explosive atmospheres.
- Do not use in locations subject to vibration or impact.
- 4. Do not use in locations where radiated heat will be received from nearby heat sources.
- Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

Maintenance

△ Warning

1. Removing the product

The valve will reach a high temperature when used with high temperature fluids. Confirm that the valve temperature has dropped sufficiently before performing work. If touched inadvertently, there is a danger of being burned.

- Shut off the fluid supply and release the fluid pressure in the system.
- 2) Shut off the power supply.
- 3) Dismount the product.

2. Low frequency operation

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

▲ Caution

1. Filters and strainers

- 1) Be careful regarding clogging of filters and strainers.
- 2) Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.
- 3) Clean strainers when the pressure drop reaches 0.1 MPa.

2. Lubrication

When using after lubricating, never forget to lubricate continuously.

3. Storage

In case of long term storage after use, thoroughly remove all moisture to prevent rust and deterioration of rubber materials etc.

4. Exhaust the drainage from an air filter periodically.

Operating Precautions

⚠ Warning

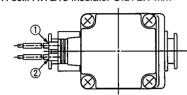

- If there is a possibility of reverse pressure being applied to the valve, take countermeasures such as mounting a check valve on the downstream side of the valve.
- When problems are caused by a water hammer, install water hammer relief equipment (accumulator etc.), or use an SMC water hammer relief valve (Series VXR). For details, please consult with SMC.

Electrical Connections

⚠ Caution

■ Grommet

Class B coil: AWG20 Insulator O.D. 2.5 mm Class H coil: AWG18 Insulator O.D. 2.1 mm

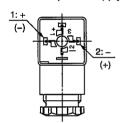

Doted voltage	Lead wire color	
Rated voltage	1	2
DC	Black	Red
100 VAC	Blue	Blue
200 VAC	Red	Red
Other AC	Gray	Gray

^{*} There is no polarity.

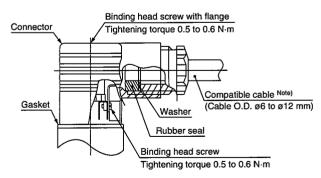

■ DIN terminal

Since internal connections are shown below for the DIN terminal, make connections to the power supply accordingly.

Terminal no.	1	2
DIN terminal	+ (-)	– (+)

- * There is no polarity.
- Use compatible heavy duty cords with cable O.D. ø6 to ø12 mm.
- Use the tightening torques below for each section.

Note) For an outside cable O.D. ø9 to ø12 mm, remove the internal parts of the rubber seal before using.

Be sure to read this before handling.

Refer to the back cover for Safety Instructions. For 2 Port Solenoid Valves for Fluid Control Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smcworld.com

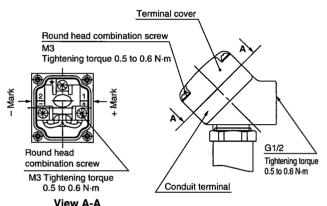

Electrical Connections

⚠ Caution

Conduit terminal

In the case of the conduit terminal, make connections according to the marks shown below.

- Use the tightening torques below for each section.
- Properly seal the terminal connection (G1/2) with the special wiring conduit etc.

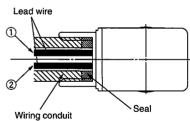

(Internal connection diagram)

■ Conduit

When used as an IP65 equivalent, use seal to install the wiring conduit. Also, use the tightening torque below for the conduit.

Class B coil: AWG20 Insulator O.D. 2.5 mm Class H coil: AWG18 Insulator O.D. 2.1 mm

(Bore size G1/2 Tightening torque 0.5 to 0.6 N·m)

Dated voltage	Lead wire color		
Rated voltage	1	2	
DC	Black	Red	
100 VAC	Blue	Blue	
200 VAC	Red	Red	
Other AC	Gray	Gray	

^{*} There is no polarity.

Description	Part no.	
Seal	VCW20-15-6	

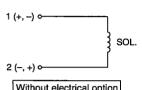

Note) Please order separately.

Electrical Circuits

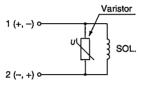

⚠ Caution

[DC circuit]

Grommet, Flat terminal

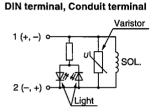

Grommet, DIN terminal, Conduit terminal, Conduit

With surge voltage suppressor

Without electrical option

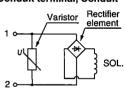

With light/surge voltage suppressor

[AC circuit]

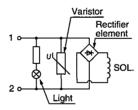

* For AC (Class B), the standard product is equipped with surge voltage suppressor.

Grommet, DIN terminal, Conduit terminal, Conduit

Without electrical option

DIN terminal, Conduit terminal

With light/surge voltage suppressor

One-touch Fitting

∕∖\Caution

For information on handling One-touch fittings and appropriate tubing, refer to page 48 and the KQ2 series One-touch fittings in Best Pneumatics No. 6. The KQ2 series information can be downloaded from the following SMC website, http://www.smcworld.com

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Caution: Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger: Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

ISO 4414: Pneumatic fluid power - General rules relating to systems. ISO 4413: Hydraulic fluid power – General rules relating to systems. IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety. etc.

∧Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its

Since the product specified here is used under various operating conditions. its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
 - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

∧ Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ **Compliance Requirements**

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
 - *2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

 Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country. assure that all local rules governing that export are known and followed.

∧ Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision history * Added N.O. valve.

* Added steam as a fluid (Insulation type Class H). * Added manifold.

QV

Edition D * Faston terminal is changed to flat terminal. * Added UL-compliant (For Air/Water).

* Increased pages from 52 to 56.

SZ

* Increased pages from 32 to 48. Edition C * Added installation options

* Added disassembly/assembly procedures.
* Leakage voltage (AC coil) was corrected from 10% or less to 5% or less.

* Increased pages from 48 to 52.

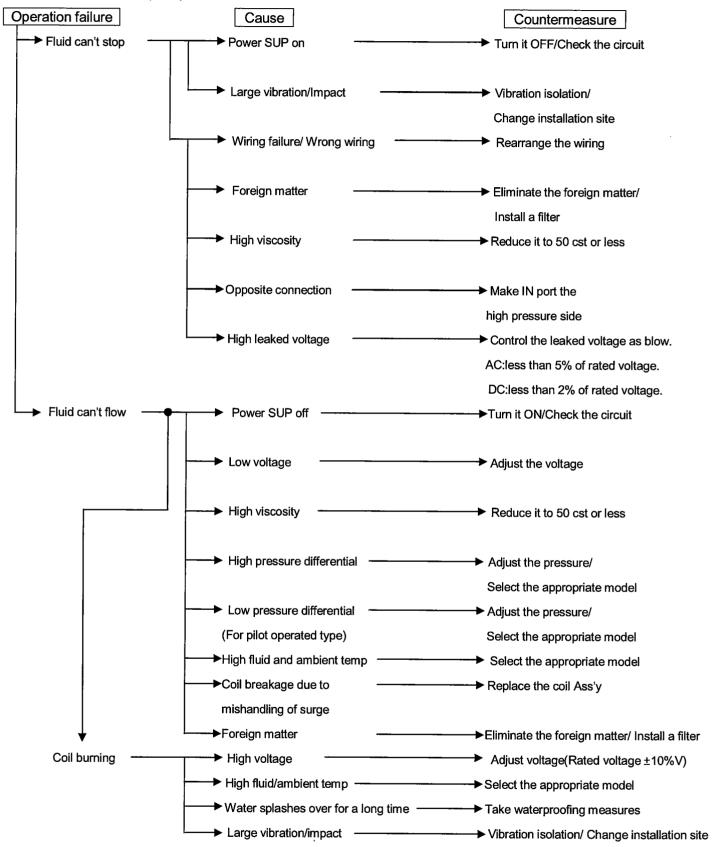

↑ Safety Instructions Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.

Trouble shooting

If abnormal operations occur while in use,

please check the following flowchart and take the appropriate measures.

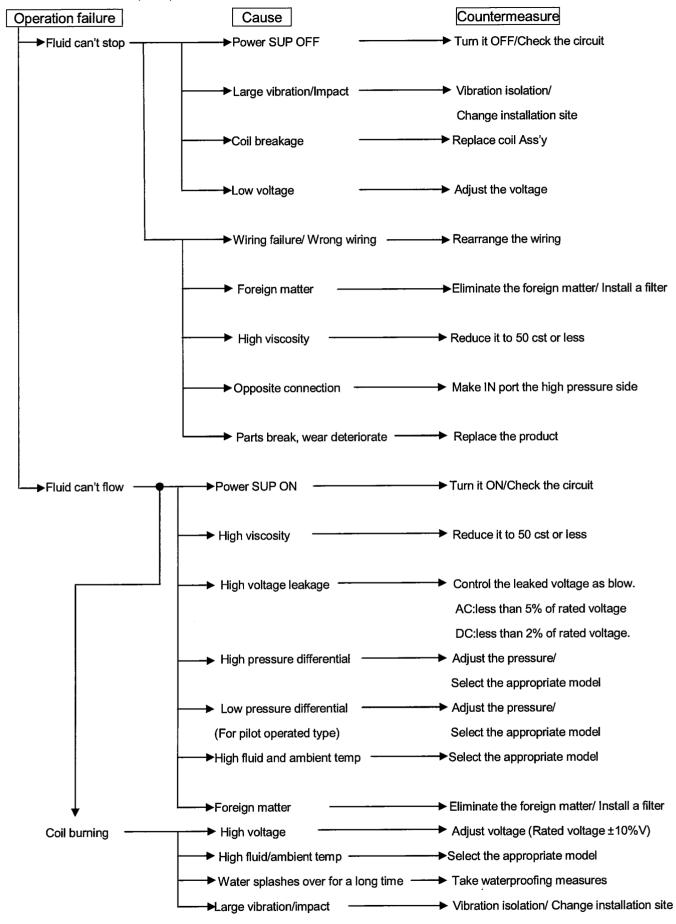

<For Normal Close(N.C.)>

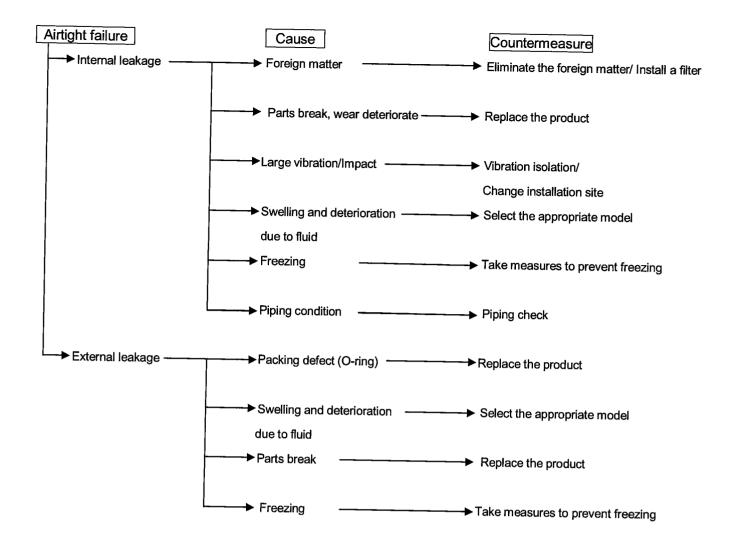

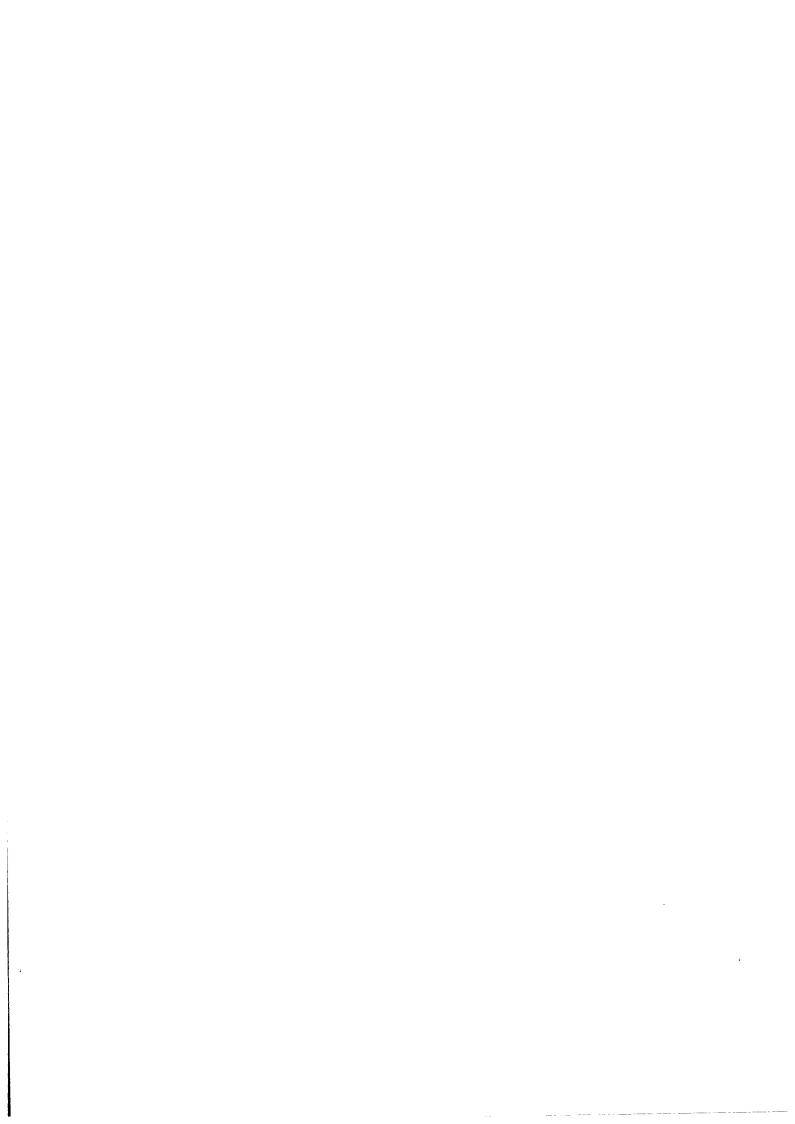

If abnormal operations occur while in use,

please check the following flowchart and take the appropriate measures.
