Range Test Notes

Our Range Testing was conducted on the seafront of Brighton, East Sussex, UK providing an open Line of Sight Test.

1. The System was set to LoRa Mode 4 with “Acknowledgment Activated”
2. The Receiver was attached to a Pole ~1.7metres from the Ground.
3. Weather Conditions Warm, Damp, Cloudy, 10°C (typical England!)
4. The transmitter was carried along the seafront whilst repeatedly operated.
5. After the “Transmit Signal” was activated the “Acknowledgment Signal” back from the Receiver was monitored to confirm a successful two way signal.
6. The system exhibited some signal failures along the test in particular when not in line of sight
7. Just under 12KM range was achieved, the system was working 100% however testing ceased because we could go no further in “line of sight”. So the system would have operated over a longer distance if we could have done so.
