

Features

- Uniform light output
- Low power consumption
- I.C. Compatible
- Long life-solid state reliability
- Compliance with EU REACH
- The product itself will remain RoHS compliant

RS PRO LEDs

RS Stock No.: 0588791

RS PRO is the own brand of RS. The RS PRO Seal of Approval is your assurance of professional quality, a guarantee that every part is rigorously tested, inspected, and audited against demanding standards. Making RS PRO the Smart Choice for our customers.

LEDs

5mm RGB Multi-color Round With Flange, Four Leads with One Common Cathode.

Lens color: White Diffused

This LED adopts a solid-state design, with a long lifetime and reliable and

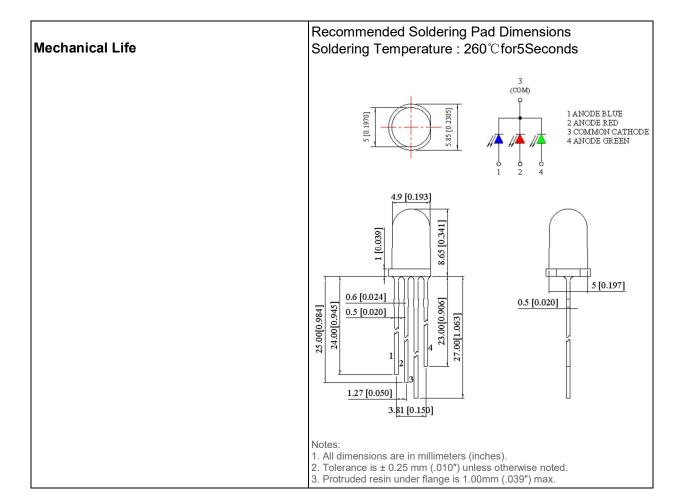

uniform light output. and Applications is

- TV set
- Monitor
- Telephone
- Computer
- Circuit board, etc

General Specifications

LED Colour	RGB
Dimensions	5mm

Parameters		Symbol	Max.	Unit	
Power Dissipation	Red	Pd	60	mW	
	Green		90		
	Blue		90		
Peak Forward Current (Per Chip) (a)		IFP	100	mA	
Forward Current (Per Chip) (b)	Red	lF	25	mA	
	Green		25		
	Blue		25		
Reverse Voltage (Per Chip)		VR	5	V	
Operating Temperature Range		Topr	-40°C to +85°C		
Storage Temperature Range		Tstg	-40°C to +85°C		
Lead Soldering Temperature [4mm (.157″) From Body]		Tsld	260°C for 5 Seconds		

Notes:

- a. Duty Factor = 10%, Frequency = 1 kHz.
- b. Derate linearly as shown in derating curve.

Electrical Optical Characteristics at Ta=25 ℃

LEDs

Parameters	Symbol	Emitting Color	Min.	Тур.	Max.	Unit	Test Condition
Luminous Intensity ^(a)	IV	Red	200	500		mcd	IF=20mA
		Green	1000	1500			
		Blue	150	200			
		Red		80		Deg	IF=20mA
Viewing Angle (b)	2θ _{1/2}	Green		80			
		Blue		80			
Peak Emission Wavelength		Red		632		nm	IF=20mA
	λр	Green		520			
		Blue		468			
Dominant Wavelength ^(c)	λd	Red		624		nm	IF=20mA
		Green		525			
		Blue		470			
Spectral Line Half-Width	Δλ	Red		20		nm	IF=20mA
		Green		20			
		Blue		20			
		Red	1.60	2.00	2.40		
Forward Voltage	VF	Green	2.80	3.20	3.60	V	IF=20mA
		Blue	2.80	3.20	3.60		
Reverse Current	IR	Red			10	μΑ	V _R =5V
		Green					
		Blue					

Notes

Typica IElectrical / Optical Characteristics Curves

(25[°]C Ambient Temperature Unless Otherwise Noted)

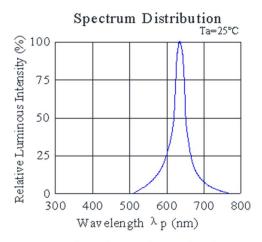

a. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve. The lv guarantee must be included with $\pm 15\%$ testing tolerance.

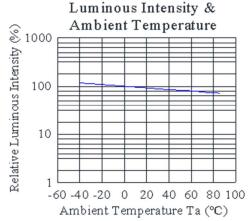

b. 201/2 is the o-axis angle where the luminous intensity is 1/2 the peak intensity.

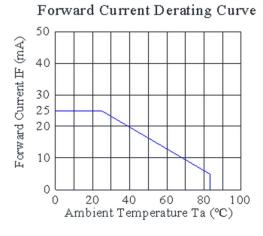

c. The dominant wavelength (λ d) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

- 2.1 The LEDs should be stored at 30°C or less and 70%RH or less after being shipped and the storage life limits are 3 months. If the LEDs are stored for 3 months or more, they can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material.
- 2.2 Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LEDs if necessary.

4. Lead Forming & Assembly

During lead forming, the leads should be bent at a point at least 1.6mm from the base of LED lens. Do not use the base of the lead frame as a fulcrum during forming. Lead forming must be done before soldering, at normal temperature. During assembly on PCB, use minimum clinch force possible to avoid excessive mechanical stress.

5. Soldering

When soldering, for Lamp without stopper type and must be leave a minimum of 3mm clearance from the base of the lens to the soldering point. Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

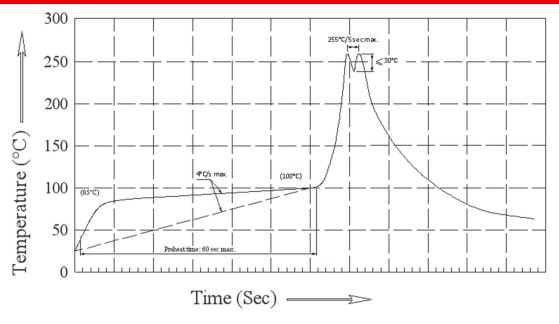

Soldering Iron		Wave Soldering		
Temperature	300□ Max.	Pre-heat	100□ Max.	
remperature	3 sec. Max.	Pre-heat Time	60 sec. Max.	
Caldanina Tima		Solder Wave	260□ Max.	
Soldering Time	(one time only)	Soldering Time	5 sec. Max.	

Note:

a. Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

Recommended Wave Soldering Profiles

Notes:

a.Recommend pre-heat temperature of 105° C or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of 260° C.

b.Peak wave soldering temperature between 245° C ~ 255°C for 3 sec (5 sec max).

c.Do not apply stress to the epoxy resin while the temperature is above 85°C.

d. Fixtures should not incur stress on the component when mounting and during soldering process.

e.SAC 305 solder alloy is recommended.

f.No more than one wave soldering pass.

6. Drive Method

An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

- (A) Recommended circuit
- (B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

7. Repairing

LEDs

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

8. ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED. Suggestions to prevent ESD damage:

- 8.1. Use a conductive wrist band or anti- electrostatic glove when handling these LEDs.
- 8.2. All devices, equipment, and machinery must be properly grounded.
- 8.3. Work tables, storage racks, etc. should be properly grounded.
- 8.4. Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handing.

ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or "no light up" at low currents.

To verify for ESD damage, check for "light up" and VF of the suspect LEDs at low currents.

The VF of "good" LEDs should be >2.0V@0.1mA for InGaN product and >1.4V@0.1mA for AlInGaP product.

9. Others

- 9.1 The information included in this document reflects representative usage scenarios and is intended for technical reference only.
- 9.2 The part number, type, and specifications mentioned in this document are subject to future change and improvement without notice. Before production usage customer should refer to the latest datasheet for the updated specifications.
- 9.3 When using the products referenced in this document, please make sure the product is being operated within the environmental and electrical limits specified in the datasheet. If customer usage exceeds the specified limits, RS will not be responsible for any subsequent issues.
- 9.4 The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household applications). Consult RS's Sales in advance for information on applications in which exceptional reliability is required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health, such as in aviation, transportation, traffic control equipment, medical and life support systems and safety devices.
