MELSEC iQ-F Series
iQ Platform-compatible PLC

2016

# global impact of MITSUBISHI ELECTRIC 

Through Mitsubishi Electric's vision, "Changes for the Better" are possible for a brighter future.

## Changes for the Better

We bring together the best minds to create the best technologies. At Mitsubishi Electric, we understand that technology is the driving force of change in our lives. By bringing greater comfort to daily life, maximizing the efficiency of businesses and keeping things running across society, we integrate technology and innovation to bring changes for the better.

Mitsubishi Electric is involved in many areas including the following

## Energy and Electric Systems

A wide range of power and electrical products from generators to large-scale displays.

## Electronic Devices

A wide portfolio of cutting-edge semiconductor devices for systems and products.

## Home Appliance

Dependable consumer products like air conditioners and home entertainment systems.

## Information and Communication Systems

Commercial and consumer-centric equipment, products and systems.

## Industrial Automation Systems

Maximizing productivity and efficiency with cutting-edge automation technology.

## Concept

## MELSEC <br> iQ.Fseries

Designed on the concepts of outstanding performance, superior drive control and user centric programming, Mitsubishi's MELSEC-F Series has been reborn as the MELSEC iQ-F Series.

From stand alone use to networked system applications, MELSEC iQ-F Series brings your business to the next level of industry.

## FX5UC

## The next level of industry

Further extending the range of applications through improved fundamental performance, cooperation with drive devices and improved programming environment.

Conveyance

Food \& Beverage

Packaging

Air-conditioning

New micro PLC designed on the concepts of ...

- High-speed system bus
- Extensive built-in functions
- Enhanced security functions
- Battery-less

- Easy built-in positioning (4-axis 200 kpps )
- Simple interpolation functions
- 4-axis synchronous control with simple motion module (dedicated positioning software not needed)

- Easy programming by drag and drop
- Reduced development time with module FB
- Parameterized setup for a variety of functions

GXWarksヨ

## Taking the iQ Platform to the next level.

iQ platform minimizes TCO* by providing innovative solutions for:<br>Building a stable production system with enhanced productivity<br>Reducing the time from system development to startup for shorter product cycles<br>Efficiently managing and servicing the system to reduce down time and maintain productivity<br>Ensuring product quality by swiftly processing large volumes of control data and production data and establishing<br>traceability<br>*TCO: Total Cost of Ownership

## PLC \& HMI

1. High-speed bus performance greatly enhances the total system performance with the high-speed system bus performance ( $150 \times$ conventional speed*1)
2. Standardize programs with pre-defined module function blocks and module labels
3. Uniform and powerful security functions

## Network

1. Achieve loss-less retrieval with CC-Link IE Field 1 Gbps high-speed communication
(link refresh performance 40× conventional levels*1)
2. Seamless connectivity with each device using SLMP*
*SLMP: SeamLess Message Protocol

## Engineering Environment

1. The intuitive programming environment of GX Works3 reduces development cost.
2. Module configuration drawings can be generated through direct reading from actual hardware.
3. Share parameters across multiple engineering software via MELSOFT Navigator.

## eF@ctory

$\mathrm{i}_{\mathrm{r}}$ watim

MELSEC iQ-R

PLC \& HMI

## ERP (Enterprise resource planning)

## Advanced Built-in Functions

## CPU Performance

MELSEC iQ-F is powered by a high speed CPU that can execute the LD instruction in 34 ns .
Furthermore, MELSEC iQ-F can execute structured programs, execute multiple programs and handle ST language and function blocks.

## Built-in Analog Input/Output (with alarm output) Ex50

FX5U is equipped with 12-bit 2ch analog input and 1ch analog output.
With parameter setup, no programming is required.
Value shifting, scaling and alarm output can also be set easily with parameters.

## Built-in SD Memory Card Slot

A built-in SD memory card slot is convenient for updating the program and mass production of equipment. Data can be logged in SD memory card (future support), making it easy to analyze the system status and production state, etc.
>> Example of mass-production of equipment using SD memory card

## RUN/STOP/RESET Switch

RUN/STOP/RESET switch is built in.
PLC can be rebooted without turning off the main power for efficient debugging.

Built-in RS-485 port (with MODBUS ${ }^{\ominus}$ function)
Connect to serial devices up to 50 m away with built-in RS-485 port. Control for up to 16 Mitsubishi inverters is possible with dedicated inverter communication instructions. MODBUS is also supported and can connect up to 32 MODBUS devices such as PLCs, sensors and temperature controllers.
>> Inverter Communication

>> MODBUS Communication
MODBUS devices
(Inverter, Temperature controllers,
etc.) etc.)

-

## Security

MELSEC iQ-F has advanced security functions (file password, remote password, security key) to prevent data theft and illegal operations by unauthorized persons.

## High-speed System Bus Communication

High-speed system bus communication at 1.5 K words/ms (approximately 150 times faster compared with FX3U), together with high speed CPU, allows MELSEC iQ-F to output maximum performance even when heavy data communication intelligent function modules are used.

CC-Línk IE Field

Battery-less and Maintenance-free

MELSEC iQ-F series holds programs and devices in nonvolatile memory such as flash ROM, and does not require a battery.

* It is possible to increase the capacity of held devices by using an optional battery.

## Built-in Ethernet Port

The Ethernet communication port can handle communication of up to 8 connections on the network, and can support multiple connections with personal computer and other devices. In addition, the Ethernet communication port can handle seamless SLMP communication with the upper-level device.

## >> SLMP Communication

PC and other devices can read/write to the CPU module via the open protocol SLMP*.

## >> Remote Maintenance

Program read/write can be made by GX Works3 connected via VPN.

## Advanced positioning function

## Built-in Positioning (200 kpps, 4 axes built in) + Postitioning 2 2xes (200 kpps, 2xess)

## Positioning capable of $20 \mu \mathrm{~s}$ high-speed start

FX5U/FX5UC is equipped with built-in positioning functions that can utilize 8 ch high speed counter function and 4 axes pulse output. In addition to the existing interrupt stop operation and variable speed operation, new functions have been added and made even easier to use. Furthermore, up to four high-speed pulse I/O modules can be connected for affordable multi-axis control.

[Example of carton packing system]

## Simple Motion Module (4-axis control module)

## Positioning control with SSCNETIII/H

FX5-40SSC-S is equipped with a 4-axis positioning function compatible with SSCNETIII/H. By combining linear interpolation, 2-axis circular interpolation and continuous trajectory control in the program set with a table, a smooth trajectory can be easily drawn.

Application examples

- Sealing system
- Palletizer
- Grinding system

- Linear interpolation
- Circular interpolation
- Continuous trajectory control
- S-curve acceleration/deceleration

## Advanced Motion Control

## Making simple motion with compactly packed extra functions

By starting with parameter settings and the sequence program, the simple motion modules can realize a variety of motion control including positioning control, advanced synchronous control, cam control and speed-torque control.

## - Synchronous control

In addition to synchronous control that replaces physical machine mechanisms such as gears, shaft, transmission and cam with software, functions such as cam control, clutch and cam auto-generation are easily realized. Since synchronous control can be started and stopped for each axis, programs can contain both synchronous control axes and positioning control axes.
Up to four axes can be synchronized to the synchronous encoder axis, enabling use with a variety of systems.

- Use synchronous control and cam control to build a system perfect for your equipment.
- Register up to 64 types of cam patterns to respond to any type of packaging needs.
- Perform continuous operation without stopping the workpiece operation.

## Mark detection function

The cutter axis deviation can be compensated by detecting a mark on the workpiece so the workpiece can be cut at a constant position.

## - Cam data auto-generation

Easily program and automatically generate difficult cam data for rotary cutters just by inputting the sheet length, synchronization width, and cam resolution, etc.

[Example of rotary cutter control with mark detection and cam data]
User-created GOT screen

Parameter settings, including items like sheet length, etc.

## User-friendly programming software

## GXWarksヨ

Software for comprehensively supporting the design and maintenance of sequence programs.
Easily and intuitively program by making "selections" in a graphical environment.
Reduce maintenance and engineering costs with diagnosis and troubleshooting function.

## System design with a convenient parts library

With GX Works3, designing a system is as easy as preparing the module configuration diagram by dragging and dropping selected parts.

## Auto-generation of module parameters

When preparing the module configuration diagram, simply double-click the module to automatically generate the module parameters. A window with an easy-to-use parameter settings screen opens, enabling module parameters to be modified as needed.

## Main programming languages supported

The main IEC languages are supported by GX Works3. Various different programming languages can be used within the same project simultaneously and can be viewed easily via the menu tab. The labels and devices used in each program can be shared across multiple platforms, with user defined function blocks supported.

## Reduce repetitive program tasks

Global labels, local labels and module labels are supported by GX Works3. Global labels can be shared by multiple programs and with other MELSOFT software. Local labels can be used in registered programs and function blocks. Module labels contain buffer memory information for various intelligent function modules. Therefore, buffer memory addresses need not be referenced when programming.

## Integrated simple motion setup tool

GX Works3 is equipped with a simple motion setup tool that makes it easy to change simple motion module settings such as module parameters, positioning data and servo parameters. Also, the servo adjustment is simplified using it.

System Configuration

Synchronized Control Parameter

Digital Oscilloscope

## Advanced MELSEC iQ-F Series

## Simple and convenient parameter settings

With MELSEC iQ-F, various device settings that conventionally had to be programmed can be input in table format. Easily set the built-in functions as well as extension devices just by inputting values into the parameters.
The program's execution trigger can also be set with the parameters.

## [Functions set with parameters]

Settings for CPU parameters, Ethernet port, RS-485
communication port, input response time, expansion board, memory card, security, etc.
Settings for expansion adapter, intelligent function module and program parameters

## Flexible internal devices

A variety of devices including new latch relays and link relays, and expanded timers and counters are available.
The number of device points can be reassigned and used in the internal memory.

## - Providing the convenience of special devices

In addition to the conventional special devices, up to 12000 points of convenient system devices compatible with upper level devices are added.

## New upper level compatible

system devices

- SM/SDO to 4099

Compatible
with MELSEC $\operatorname{iQ-R}$
Gompatible
MELSEC iQ F

## Conventional convenient devices

- Conventional M8000 or later devices $\rightarrow$ Has changed to SM8000 or later devices
- Conventional D8000 or later devices
$\rightarrow$ Has changed to SD8000 or later devices When migrating an FX3U/FX3UC program created using GX Works2 to MELSEC iQ-F Series, the devices are automatically converted.)
-Freely customize the latch range setting
The latch range can be set for each device, so the latch clear range can be selected during the clearing operation.

-Handy timer and counter settings
The timer and counter properties are
determined by data type and how instruct
is written, so programs can be created
regardless of the device number.
Timers:
OUT TO................ 100 ms timer
OUTH TO ........... 10 ms timer
OUTHS TO ........... 1 ms timer
OUT STO............ Retentive timer
Counters:
OUT CO ................ 16 bits counter
OUT LCO ............ 32 bits counter

## Memory area for each application

The CPU module has 64 k steps of program memory capacity, but the MELSEC iQ-F has a memory data area for each application, so all 64 k steps can be used as the program area.
Comments and statements can be written freely without affecting the program area.

```
[Maximum number of characters]
Comment: }1024\mathrm{ characters Statement: 5000 characters
```

MELSEC iQ-F Series stores the program and devices in non-volatile memory such as Flash ROM, so no battery is required.

## Dramatically more dedicated instructions

A great number of dedicated instructions have been added since the FX3.

## [FX3] 510 types <br> [FX5] 1014 types

The newly added instructions include convenient ones that are interchangeable with the MELSEC iQ-R and dedicated instructions for built-in
 functions.
(Only FX3U and FX3UC programs can be imported)
Intuitive and easy-to-understand arithmetic operations
Symbols can be input in the arithmetic operations making it easy and intuitive to describe programs.

High-performance built-in high-speed counter function
Input and measure three modes by setting the parameters.

Up to 32 tables can be set for the high-speed comparison table and up to 128 tables for the multi-point output high-speed comparison table. The DHCMOV instruction can be used to read the latest values from the special registers.

## Reinforced built-in positioning function

Positioning can be easily performed with table operation instructions. Even advanced positioning like simple linear interpolation is possible with the multi-table operation (DRVTBL) instruction and multi-axis table operation (DRVMUL) instruction.

Diverse table operation settings for multi-speed and interrupt positioning, etc.

Inverter communication command function
The built-in Mitsubishi inverter protocol makes it possible to use inverter communication instructions to control Mitsubishi inverters connected with RS-485 communication.

*: For built-in RS-485 and RS-485 expansion boards

## Built-in Ethernet function

Communication is set with parameters easily.
Functions include the diagnosis function from GX Works3, SLMP function, socket communication function and IP address change function, and unauthorized access from an external source can be prevented with remote password.

## MODBUS function

The MODBUS function can be used with parameter settings and ADPRW (MODBUS master communication instruction [data read/write.])
Communicate with devices up to 1200 m away using the RS-485 communication adapter.

Standard function/function block function
110 types of basic standard function and function blocks are provided. These can be used as parts by dragging and dropping, so when used together with dedicated instructions, programming time can be greatly reduced.

## System Configuration

Flagship model equipped with advanced built-in functions and diverse expandability

Simplifying use with renewed extension modules!
FX5U is equipped with analog functions, communication and high-speed I/O, and can easily be expanded with expansion boards and adapters. The high-speed system bus communication brings out the maximum performance of extension devices equipped with intelligent functions.

## System Configuration

FX5uc

Compact body packed with diverse functions.
Simplifying use with renewed extension modules!
The extension module compatible with FX5UC is compact and easy-to-use, and helps to downsize your system. Easily connect to the FX5 and FX3 extension modules with the variety of conversion modules available.

*: Up to 12 modules can be directly connected to the CPU module. Up to 16 modules can be connected by connecting a powered I/O module or an extension power supply module. Extension power supply modules and connector conversion modules are not included in the number of connected modules.

FX5 extension module
FX5 extension module (extension connector type) (extension cable type)

*1: When adding the extension module, it is necessary to connect it to the front stage of extension module in case of a shortage of internal power supply in CPU module.
*2: Next-stage extension connector of an extension power supply module can be used only for either connector connection or cable connection. In case of connector connection, an extension connector type module can be connected.
*3: Attach when connecting an extension cable type module to a distant location or when making two-tier connections. The connector conversion adapter (FX5-CNV-BC) is required when connected with an input/output module (extension cable type) or an intelligent function module. When using also the bus conversion module in the same system, connect the powered VO module right after the extended extension cable.

## Performance Specifications

FX5U/FX5UC CPU Module Performance Specifications

| ltems |  | Specifications |
| :---: | :---: | :---: |
| Control system |  | Stored-program repetitive operation |
| Input/output control system |  | Refresh system (Direct access input/output allowed by specification of direct access input/output [DX, DY]) |
| Programming specifications | Programming language | Ladder diagram (LD), structured text (ST), function block diagram/ladder language (FBD/LD) |
|  | Programming expansion function | Function block (FB), function (FUN), label programming (local/global) |
|  | Constant scan | 0.2 to 2000 ms (can be set in $0.1 \mathrm{~ms} \mathrm{increments)}$ |
|  | Fixed cycle interrupt | 1 to 60000 ms (can be set in $1 \mathrm{~ms} \mathrm{increments)}$ |
|  | Timer performance specifications | $100 \mathrm{~ms}, 10 \mathrm{~ms}, 1 \mathrm{~ms}$ |
|  | No. of program executions | 32 |
|  | No. of FB files | 16 (Up to 15 for user) |
| Operation specifications | Execution type | Standby type, initial execution type, scan execution type, fixed-cycle execution type, event execution type |
|  | Interrupt type | Internal timer interrupt, input interruption, high-speed comparison match interrupt, interrupt from module |
| Instruction processing time | LD XO | 34 ns |
|  | MOV D0 D1 | 34 ns |
| Memory capacity | Program capacity | 64 ksteps (128 kbytes, flash memory) |
|  | SD memory card | Memory card capacity (SD/SDHC memory card: Max. 4 Gbytes) |
|  | Device/label memory | 120 kbytes |
|  | Data memory/standard ROM | 5 Mbytes |
| Flash memory (Flash ROM) write count |  | Max. 20000 times |
| File storage capacity | Device/label memory | 1 |
|  | Data memory <br> P: No. of program files <br> FB: No. of FB files | P: 32, FB: 16 |
|  | SD memory card | 2 Gbytes: 511*, 4 Gbytes: 65534*1 |
| Clock function | Display data | Year, month, day, hour, minute, second, day of week (leap year automatic detection) |
|  | Precision | Monthly difference: $\pm 45 \mathrm{sec}$ at $25^{\circ} \mathrm{C}$ (typical value) |
| No. of input/output points | (1) No. of input/output points | 256 points or less |
|  | (2) No. of remote I/O points | 384 points or less |
|  | Total No. of points of (1) and (2) | 512 points or less |
| Power failure retention (Clock data*2) | Retention method | Large-capacity capacitor |
|  | Retention time | 10 days (Ambient temperature: $25^{\circ} \mathrm{C}$ ( $77^{\circ} \mathrm{F}$ ) |
| Power failure retention (Device) | Capacity for power failure retention | 12 K words maximum*3 |

*1:The value listed above indicates the number of files stored in the root folder.
*2:Clock data is retained using the power accumulated in a large-capacity capacitor incorporated into the PLC. When voltage of the large-capacity capacitor drops, clock data is no longer accurately retained. The retention period of a fully charged capacitor (electricity is conducted across the PLC for at least 30 minutes) is 10 days (ambient temperature: $25^{\circ} \mathrm{C}$ $\left(77^{\circ} \mathrm{F}\right)$ ). How long the capacitor can hold the data depends on the operating ambient temperature. When the operating ambient temperature is high, the holding period is short.
*3: All devices in the (high-speed) device area can be held against power failure. Devices in the (standard) device area can be held also when the optional battery is mounted.

## ■ Number of device points

[^0]*2: Total of the index register (Z) and long index register (LZ) is maximum 24 words.

## Selecting the FX5U model

## $\diamond$ Product configuration

| Type | Details | Connection details, model selection |
| :---: | :---: | :---: |
| 1 cPU module | PLC with built-in CPU, power supply, input/output and program memory. | Various extension devices can be connected. |
| 24 /o module (extension cable type) | Product for extending I/O of extension cable type. <br> Some products are powered. | Input/output can be extended to up to 256 points. Up to 16 extension modules can be connected. (Extension power supply modules and connector conversion modules are not included in the number of connected modules.) Up to 4 high-speed pulse I/O modules can be connected. For details, refer to "Rules for System Configuration" on p. 26. |
| 3 FX5 extension power supply module | Module for extending power supply if CPU module's internal power supply is insufficient. Extension cable is enclosed. | Power can be supplied to I/O module, intelligent function module, and bus conversion module. <br> Up to 2 modules can be connected. |
| 5 FX5 intelligent function module | Module with functions other than input/output. | Up to 16 extension modules including the I/O module can be connected (Extension power supply modules and connector conversion modules are not included in the number of connected modules.) |
| 6 Connector conversion module | Module for connecting FX5 Series (extension connector type) extension module | An extension module (extension connector type) for FX5 can be connected. |
| 7 <br> I/O module (Extension connector type) | Product for adding extension connector type inputs/outputs. | The maximum number of points for input/output extension is 256 . Up to 16 extension modules can be connected. (Extension power supply modules and connector conversion modules are not included in the number of connected modules.) Using this type of I/O module requires the connector conversion module. |
| 8 Bus conversion module | Conversion module for connecting FX3 Series extension module. | FX3 extension module can be connected only to the right side of the bus conversion module. <br> When using FX5-CNV-BUSC, a connector conversion module is required. |
| 9 FX5 expansion board | Board connected to front of CPU module to expand functions. | Up to 1 module can be connected to the front of the CPU module. (Expansion adapter can also be used.) |
| 10 FX5 expansion adapter | Adapter connected to left side of CPU module to expand functions. | Up to 6 modules can be connected to the left side of the CPU module. |
| 11 FX3 extension power supply module | Module for extending power supply if CPU module's internal power supply is insufficient. Extension cable is enclosed. | Up to 2 modules can be connected. <br> The bus conversion module is required for use. |
| 12 FX3 intelligent function module | Module with functions other than input/output. | When using the FX3 extension power supply module, up to 8 modules* can be used. When not using the FX3 extension power supply module, up to 6 modules* can be used. The bus conversion module is required for use. |

| FX5-32ET/DSS* |  |  |  |  | DC input (sink/source)/transistor output (source) |  |  |

*: Can be connected only to the DC power type system

## 3 FX5 extension power supply module

| Model | Function | Number of occupied input/ output points | Power supply capacity |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC power supply | 24 V DC power supply |
| FX5-1PSU-5V** | Extension power supply | - | 1200 mA*3 | $300 \mathrm{~mA}^{* 3}$ |
| FX5-C1PS-5V*2 | Extension power supply | - | $1200 \mathrm{~mA}^{* 3}$ | $625 \mathrm{~mA}^{* 3}$ |

*1: Can be connected only to the AC power type system
*2: Can be connected only to the DC power type system
$* 3$ : Derating occurs when the ambient temperature exceeds $40^{\circ} \mathrm{C}$. For details, refer to manuals of each product.

4 I/O module (extension cable type)

| Model | I/O type | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 VDC internal current consumption | 24 V DC external power supply |
| FX5-8EXJES | DC input (sink/source) | 8 points | 75 mA | $50 \mathrm{~mA}^{* 2}$ | - |
| FX5-16EX/ES | DC input (sink/source) | 16 points | 100 mA | $85 \mathrm{~mA}^{* 2}$ |  |
| FX5-8EYR/ES | Relay output | 8 points | 75 mA | 75 mA |  |
| FX5-8EYT/ES | Transistor output (sink) |  |  |  |  |
| FX5-8EYT/ESS | Transistor output (source) |  |  |  |  |
| FX5-16EYR/ES | Relay output | 16 points | 100 mA | 125 mA |  |
| FX5-16EYT/ES | Transistor output (sink) |  |  |  |  |
| FX5-16EYT/ESS | Transistor output (source) |  |  |  |  |
| FX5-16ET/ES-H*1 | DC input (sink/source)/transistor output (sink) | 16 points | 100 mA | $125 \mathrm{~mA}(85 \mathrm{~mA}) * 3$ |  |
| FX5-16ET/ESS-H*1 | DC input (sink/source)/transistor output (source) |  |  |  |  |

*1: Compatible with FX5U CPU modules from Ver. 1.030 (Serial number: $165 * * * *($ May 2016))
*2: Adopt " 0 mA " in the current consumption calculation for the system configuration when an external power supply is used for input circuits.
*3: Current consumption when an external power supply is used for input circuits (not including the input circuit current)

## 5 FX5 intelligent function module

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 VDC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-40SSC-S | Simple motion 4-axis control (SSCNETIII/H compatible) | 8 points | - | - | 250 mA |
| FX5-CCLIEF* | CC-Link IE field network intelligent device station | 8 points | 10 mA | - | 230 mA |

| FX5-4DA-ADP | 4 ch voltage output/current output |  |  | - | 160 mA |

11 FX3 extension power supply module

| Model | Function | Number of occupied input/output points | Power supply capacity |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 VDC power supply | 24 V DC power supply | 24 V DC external power supply |
| FX3U-1PSU-5V | Extension power supply | - | 1000 mA* | 300 m** | - |

[^3]12 FX3 intelligent function module

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX3U-4AD | 4 ch voltage input/current input | 8 points | 110 mA | - | 90 mA |
| FX3U-4DA | 4 ch voltage output/current output |  | 120 mA |  | 160 mA |
| FX3U-4LC | 4-loop temperature control (resistance thermometer/thermocouple/low voltage) |  | 160 mA |  | 50 mA |
| FX3U-1PG | Pulse output for 1-axis control |  | 150 mA |  | 40 mA |
| FX3U-2HC | 2 ch high-speed counter |  | 245 mA |  | - |
| FX3U-16CCL-M | CC-Link master | * |  |  | 240 mA |
| FX3U-64CCL | CC-Link intelligent device station | 8 points |  |  | 220 mA |
| FX3U-128ASL-M | AnyWireASLINK master | * | 130 mA |  | - |

*: Varies according to settings.

## Calculation of current consumed by extension modules (For the AC power supply type)*1

The power required for the expansion adapter, expansion board and extension module is supplied from the CPU module or extension power supply module. Use the following calculations to confirm whether the required power can be supplied. (All calculations must be satisfied.)

*1: For calculation for the DC power supply type, refer to the manual. *2: When connecting an input module to the back stage (right side) of the extension power supply module, power will be supplied from the extension power supply module, power 5 V DC power is supplied from an extension power supply module. [5 V DC power supply]

*3: The 24 V DC service power calculation results value (when positive) indicates the 24 VDC service power supply's remaining capacity, and can be used as an external load power.

Refer to the next section for the details of some products since the number of connected modules may be limited.

## Lineup details/model selection

Rules for System Configuration
The total number of I/O points and remote I/O points for the CPU module and extension devices controllable in FX5U CPU module is 512 points or less.

*1: Please recognize the no. of I/O points set by the rotary switch of AnyWireASLINK master as the no. of remote I/O points.
*2: When simultaneously using CC-Link master and AnyWireASLINK master, please connect AnyWireASLINK
master to the front stage (left side). FX5U CPU occupies the max. 256 points of remote I/O points including the no. of those not occupied since CC-Link master parameters are set by PLC program. Therefore, when connecting CC-Link master to the front stage (left side), the no. of remote I/O points of AnyWireASLINK master may be less than 128. Refer to the "FX3U-128ASL-M and FX3U-16CCL-M user's manual" for simultaneous use.

## Limitation on power supply type when connecting

It is not possible to install both the AC type and the DC type in one system.
The power supply type is limited for extension modules connectable to the following CPU modules. For details, refer to the manual of each product.

| Type/model/power supply type | Connectable extension module |  |
| :---: | :---: | :---: |
|  | Type | Model/power supply type |
| FX5U CPU module FX5U- $\square \mathrm{M} \square / \mathrm{E} \square$ (AC power supply type) | Powered I/O module | FX5-32E $\square / E \square$ (AC power supply type) |
|  | Extension power supply module | FX5-1PSU-5V (AC power supply type) |
| FX5U CPU module FX5U- $\square \mathrm{M} \square / \mathrm{D} \square$ (DC power supply type) | Powered I/O module | FX5-32ED/D $\square$ (DC power supply type) |
|  | Extension power supply module | FX5-C1PS-5V (DC power supply type) |

Limitation on number of modules when extending
The number of connectable modules is limited for the following products. For details, refer to manuals of each product.

| Type | Mode//type | Setting method/precautions |
| :---: | :---: | :---: |
| I/O module (Extension cable type) | FX5-16ET/ES-H | Up to 4 modules can be connected for the entire system. |
|  | FX5-16ET/ESS-H |  |
| FX5 intelligent function module | FX5-CCLIEF | Only 1 module can be connected in the whole system. |
| FX3 intelligent function module | FX3U-4AD | ■When using FX3U-1PSU-5V: Up to 8 modules can be connected per system. <br> -When not using FX3U-1PSU-5V: Up to 6 modules can be connected per system. |
|  | FX3U-4DA |  |
|  | FX3U-1PG |  |
|  | FX3U-4LC |  |
|  | FX3U-128ASL-M | Up to 1 module of each model type can be connected in the whole system. |
|  | FX3U-16CCL-M |  |
|  | FX3U-64CCL |  |
|  | FX3U-2HC | Up to 2 modules can be connected for the entire system. When not using the FX3U-1PSU-5V, connect immediately after the bus conversion module. |

## Selecting the FX5UC model

## $\diamond$ Product configuration

| Type | Details | Connection details, model selection |
| :---: | :---: | :---: |
| 1 CPU module | PLC with built-in CPU, power supply, input/output and program memory. | Various extension devices can be connected. |
| 2 I/O module (extension connector type) | Product for extension I/O of extension connector type. | Input/output can be extended to up to 256 points. <br> Up to 16 extension modules can be connected. (Extension power supply modules and connector conversion modules are not included in the number of connected modules.) <br> For details, refer to "Rules for System Configuration" on p. 31. |
| 3 FX5 extension power supply module | Module for extension power supply if CPU module's internal power supply is insufficient. Connector conversion function is also provided. | Power can be supplied to I/O module, intelligent function module, and bus conversion module. <br> Up to 2 modules can be connected. |
| 4 Connector conversion module | Module for connecting FX5 Series (extension cable type) extension module | Extension devices (extension cable type) for FX5 can be connected. |
| 5 <br> I/O module (extension cable type) | Product for extending I/O of extension cable type. | Input/output can be extended to up to 256 points. Up to 16 extension modules can be connected. (Connector conversion modules are not included in the number of connected modules.) Up to 4 high-speed pulse I/O modules can be connected. Using this type of I/O module requires the connector conversion module. |
| 6 FX5 intelligent function module | Module with functions other than input/output. | Up to 16 extension modules including I/O modules can be connected. (Connector conversion modules are not included in the number of connected modules.) Using this type of module requires the connector conversion module. |
| 7 Bus conversion module | Conversion module for connecting FX3 extension module. | FX3 Series extension modules can be connected only to the right side of the bus conversion module. <br> Using the FX5-CNV-BUS requires the connector conversion module or extension power supply module. |
| 8 FX5 expansion adapter | Adapter connected to left side of CPU module to expand functions. | Up to 6 modules can be connected to the left side of the CPU module. |
| 9 FX3 intelligent function module | Module with functions other than input/output. | Up to 6 modules* can be connected to the right side of the bus conversion module. The bus conversion module is required for use. |

*: Excluding some models
1 CPU module

| Model | Function | Number of occupied input/output points | Power supply capacity |  | VO type | No. of input points | No. of output points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 VDC power supply | $24 \mathrm{VDC}$ power supply |  |  |  |
| FX5UC-32MT/D | CPU module | 32 points | 720 mA | 500 mA | DC input (sink)/transistor (sink) | 16 points | 16 points |
| FX5UC-32MT/DSS |  |  |  |  | DC input (sink/source)/transistor (source) |  |  |
| FX5UC-64MT/D |  | 64 points |  |  | DC input (sink)/transistor (sink) | 32 points | 32 points |
| FX5UC-64MT/DSS |  |  |  |  | DC input (sink/source)/transistor (source) |  |  |
| FX5UC-96MT/D |  | 96 points |  |  | DC input (sink)/transistor (sink) | 48 points | 48 points |
| FX5UC-96MT/DSS |  |  |  |  | DC input (sink/source)/transistor (source) |  |  |

2 I/O module (extension connector type)

| Model | VO type | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-C16EXID | DC input (sink) | 16 points | 100 mA |  | 65 mA* |
| FX5-C32EXID |  | 32 points | 120 mA |  | $130 \mathrm{mA*}$ |
| FX5-C16EX/DS | DC input (sink/source) | 16 points | 100 mA |  | $65 \mathrm{~mA} *$ |
| FX5-C32EXIDS |  | 32 points | 120 mA |  | $130 \mathrm{mA*}$ |
| FX5-C16EYT/D | Transistor output (sink) | 16 points | 100 mA | 100 mA | - |
| FX5-C32EYT/D |  | 32 points | 120 mA | 200 mA |  |
| FX5-C16EYT/DSS | Transistor output (source) | 16 points | 100 mA | 100 mA |  |
| FX5-C32EYT/DSS |  | 32 points | 120 mA | 200 mA |  |
| FX5-C32ET/D | DC input (sink)/transistor output (sink) | 32 points (16 input points, 16 output points) | 120 mA | 100 mA | 65 mA* |
| FX5-C32ET/DSS | DC input (sink/source)/transistor output (source) |  |  |  |  |

*: Adopt " 0 mA " in the current consumption calculation for the system configuration when an external power supply is used for input circuits.

## 3 FX5 extension power supply module

| Model | Function | Number of occupied input/output points | Power supply capacity |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC power supply | 24 V DC power supply |
| FX5-C1PS-5V | Extension power supply | - | 1200 mA* | 625 mA* |

*: Derating occurs when the ambient temperature exceeds $40^{\circ} \mathrm{C}$. For details, refer to the manual.
4 Connector conversion module

|  | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Model |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-CNV-IFC | Connector conversion (FX5 (Extension connector type) $\rightarrow$ FX5 (Extension cable type)) | - | - | - | - |

## 5-1) I/O module (DC power supply/DC input type) (extension cable type)

| Model | Function | Number of occupied input/ output points | Power supply capacity |  | V/O type | No. of input points | No. of output points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC power supply | $24 \mathrm{VDC}$ power supply |  |  |  |
| FX5-32ER/DS | Input/output module | 32 points | 965 mA | 310 mA | DC input (sink/source)/relay output | 16 points | 16 points |
| FX5-32ET/DS |  |  |  |  | DC input (sink/source)/transistor output (sink) |  |  |
| FX5-32ET/DSS |  |  |  |  | DC input (sink/source)/transistor output (source) |  |  |

## 5 -2) I/O module (extension cable type)

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-8EXVES | DC input (sink/source) | 8 points | 75 mA | $50 \mathrm{mA*}$ |  |
| FX5-16EXJES | DC input (sink/source) | 16 points | 100 mA | $85 \mathrm{~mA}^{* 1}$ |  |
| FX5-8EYR/ES | Relay output | 8 points | 75 mA | 75 mA |  |
| FX5-8EYT/ES | Transistor output (sink) |  |  |  |  |
| FX5-8EYT/ESS | Transistor output (source) |  |  |  |  |
| FX5-16EYR/ES | Relay output | 16 points | 100 mA | 125 mA |  |
| FX5-16EYT/ES | Transistor output (sink) |  |  |  |  |
| FX5-16EYT/ESS | Transistor output (source) |  |  |  |  |
| FX5-16ET/ES-H*2 | DC input (sink/source)/transistor output (sink) | 16 points | 100 mA | $125 \mathrm{~mA}(85 \mathrm{~mA}){ }^{* 3}$ |  |
| FX5-16ET/ESS-H*2 | DC input (sink/source)/transistor output (source) |  |  |  |  |

*1: Adopt " 0 mA " in the current consumption calculation for the system configuration when an external power supply is used for input circuits.
*2: Compatible with FX5UC CPU modules from Ver. 1.030 (Serial number: 165**** (May 2016))
*3: Current consumption when an external power supply is used for input circuits (not including the input circuit current)

## 6 FX5 intelligent function module

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-40SSC-S | Simple motion 4-axis control (SSCNETIII/H compatible) | 8 points | - | - | 250 mA |
| FX5-CCLIEF* | CC-Link IE field network intelligent device station | 8 points | 10 mA | - | 230 mA |

## Lineup details/model selection

7 Bus conversion module

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX5-CNV-BUSC | Bus conversion <br> FX5 (extension connector type) $\rightarrow$ FX3 extension | 8 points | 150 mA | - | - |
| FX5-CNV-BUS | Bus conversion <br> FX5 (extension cable type) $\rightarrow$ FX3 extension |  |  |  |  |

## 8 FX5 expansion adapter

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 VDC internal current consumption | 24 VDC internal current consumption | 24 V DC external power supply |
| FX5-232ADP | RS-232C communication | - | 30 mA | 30 mA | - |
| FX5-485ADP | RS-485 communication |  | 20 mA |  |  |
| FX5-4AD-ADP | 4 ch voltage input/current input |  | 10 mA | 20 mA |  |
| FX5-4DA-ADP | 4 ch voltage output/current output |  |  | - | 160 mA |

9 FX3 intelligent function module

| Model | Function | Number of occupied input/output points | Current consumption |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 5 V DC internal current consumption | 24 V DC internal current consumption | 24 V DC external power supply |
| FX3U-4AD | 4 ch voltage input/current input | 8 points | 110 mA | - | 90 mA |
| FX3U-4DA | 4 ch voltage output/current output |  | 120 mA |  | 160 mA |
| FX3U-4LC | 4-loop temperature control (resistance thermometer/thermocouple/low voltage) |  | 160 mA |  | 50 mA |
| FX3U-1PG | Pulse output for 1-axis control |  | 150 mA |  | 40 mA |
| FX3U-2HC | 2 ch high-speed counter |  | 245 mA |  | - |
| FX3U-16CCL-M | CC-Link master | * | - |  | 240 mA |
| FX3U-64CCL | CC-Link intelligent device station | 8 points |  |  | 220 mA |
| FX3U-128ASL-M | AnyWireASLINK master | * | 130 mA |  | - |

*: Varies according to settings

## Calculation of current consumed by extension modules

The power required for the expansion adapter and extension module is supplied from the CPU module.
Use the following calculations to confirm whether the required power can be supplied. (All calculations must be satisfied.)

If the calculation results are negative, the power capacity is exceeded so review the system configuration.

[^4]Rules for System Configuration
The total number of I/O points and remote I/O points for the CPU module and extension devices controllable in FX5UC CPU module is 512 points or less.

## Lineup details/model selection

## Limitation on power supply type when connecting

It is not possible to install both the AC type and the DC type in one system.
The power supply type is limited for extension modules connectable to the following CPU modules. For details, refer to the manual of each product.

| Type/model/power supply type |  | Connectable extension module |  |
| :--- | :--- | :--- | :---: |
|  | Type | Model/power supply type |  |
| FX5U CPU module FX5U- $\square M \square / D \square$ (DC power supply type) | Powered I/O module | FX5-32ED/D (DC power supply type) |  |
|  | Extension power supply module | FX5-C1PS-5V (DC power supply type) |  |

## Limitation on number of modules when extending

The number of connectable modules is limited for the following products. For details, refer to manuals of each product.

| Type | Model/type | Setting method/precautions |
| :---: | :---: | :---: |
| I/O module (Extension cable type) | FX5-16ET/ES-H | Up to 4 modules can be connected for the entire system. |
| I/O modul (Extension cable type) | FX5-16ET/ESS-H | can be connected for the entire syster |
| FX5 intelligent function module | FX5-CCLIEF | Only 1 module can be connected in the whole system. |
| FX3 intelligent function module | FX3U-4AD | Up to 6 modules can be connected for the entire system. |
|  | FX3U-4DA |  |
|  | FX3U-1PG |  |
|  | FX3U-4LC |  |
|  | FX3U-128ASL-M | Up to 1 module of each model type can be connected in the whole system. |
|  | FX3U-16CCL-M |  |
|  | FX3U-64CCL |  |
|  | FX3U-2HC | Up to 2 modules can be connected for the entire system. Connect immediately after the bus conversion module. |

[^5]
## I/O Module

The I/O module is a product for extending inputs/outputs.
Some products are powered.

## Powered input/output modules

Powered input/output module is a powered input/output extension device.
Like with the CPU module, various I/O modules and intelligent function modules can be connected to the rear stage of extension module.

## List of powered input/output modules

| Model |  | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Compatible CPU module |  | MASS (Weight): kg | External dimensions W×H×D (mm) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input | Output |  | FX5U | FX5UC |  |  |
| AC power supply type | FX5-32ER/ES |  | 32 points | 16 points | $\begin{aligned} & 24 \mathrm{~V} \text { DC } \\ & \text { (sink/source) } \end{aligned}$ | 16 points | Relay | $\bigcirc$ | $\times$ | Approx. 0.65 | $150 \times 90 \times 83$ |
|  | FX5-32ET/ES | Transistor (sink) |  |  |  |  |  |  |  |  |
|  | FX5-32ET/ESS | Transistor (source) |  |  |  |  |  |  |  |  |
| DC power supply type | FX5-32ER/DS | 32 points | 16 points | 24 V DC (sink/source) | 16 points | Relay | $\bigcirc$ | O* | Approx. 0.65 | $150 \times 90 \times 83$ |  |
|  | FX5-32ET/DS |  |  |  |  | Transistor (sink) |  |  |  |  |  |
|  | FX5-32ET/DSS |  |  |  |  | Transistor (source) |  |  |  |  |  |

*:Connection with FX5UC requires FX5-CNV-IFC.

## Connection cable

The extension cable for connection to the right side of the front-stage device is offered as an accessory of each powered I/O module.

## I/O module

Input modules/output modules receive the power from the CPU module, and extend input/output points.
Each module can be offered as the extension cable type or extension connector type.

## List of input modules (extension cable type)

| Model |  | Total №. of points | No. of input/output points \& Input/output type |  |  |  | Compatible CPU module |  | MASS (Weight): kg | External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input | Output |  | FX5U | FX5UC |  |  |
|  | FX5-8EX/ES |  | 8 points | 8 points | $\begin{gathered} 24 \mathrm{~V} \text { DC } \\ \text { (sink/source) } \end{gathered}$ | - | - | $\bigcirc$ | O* | Approx. 0.2 | $40 \times 90 \times 83$ |
|  | FX5-16EXJES | 16 points | 16 points | $24 \mathrm{~V} \text { DC }$ <br> (sink/source) | - | - | Approx. 0.25 |  |  |  |  |

*: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

## List of output modules (extension cable type)

*: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

## List of high-speed pulse input/output modules (extension cable type)

| Model |  | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Compatible CPU module |  | MASS <br> (Weight): kg | External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input | Output |  | FX5U | FX5UC |  |  |
|  | FX5-16ET/ES-H |  | 16 points | 8 points | 24 V DC (sink/source) | 8 points | Transistor (sink) | $\bigcirc$ | O* | Approx. 0.25 | $40 \times 90 \times 83$ |
|  | FX5-16ET-ESS-H | Transistor (source) |  |  |  |  |  |  |  |  |

*: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

## Connection cable

Extension cable type input/output modules are equipped with the extension cable for connection to the right side of the front-stage device.

## List of input modules (extension connector type)

| Model |  | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Compatible CPU module |  | MASS Weight): kg | External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Input | Output |  | FX5U | FX5UC |  |  |
|  | FX5-C16EXD |  | 16 points | 16 points | 24 V DC (sink) | - | - | O* | $\bigcirc$ | Approx. 0.10 | $14.6 \times 90 \times 87$ |
|  | FX5-C32EXD | 32 points | 32 points | Approx. 0.15 |  |  |  |  |  | $20.1 \times 90 \times 87$ |
|  | FX5-C16EXJDS | 16 points | 16 points | $\begin{gathered} 24 \mathrm{~V} \text { DC } \\ \text { (sink/source) } \end{gathered}$ | Approx. 0.10 |  |  |  |  | $14.6 \times 90 \times 87$ |
|  | FX5-C32EX/DS | 32 points | 32 points |  | Approx. 0.15 |  |  |  |  | $20.1 \times 90 \times 87$ |

*: Connection with FX5U requires FX5-CNV-IF.

## List of output modules (extension connector type)

| Model |  | Total №. of points | No. of input/output points \& input/output type |  |  |  | Compatible CPU module |  | MASS (Weight): kg | External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ |

[^7]
## Examples of combinations of FX5U inputs/outputs

The table below shows examples of combinations of FX5U extension modules. The contents of combinations can be described based on the number of input points.

- In addition to the combinations shown below, various combinations can be made by changing selected I/O modules and extension modules.

| Number of VO points |  | CPU module |  |  | Input/output module |  | Powered inputoutput module FX5-32E |  | Input/output module |  | $\begin{aligned} & \text { VO } \\ & \text { total } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Input | Output | Module model | Input | Output | Input | Output | Input | Output | Input | Output |  |
| 16 | 16 | 32M | 16 | 16 |  |  |  |  |  |  | 32 |

## Examples of combinations of FX5UC inputs/outputs

The table below shows examples of combinations of FX5UC extension modules. The contents of combinations can be described based on the number of input points.

- In addition to the combinations shown below, various combinations can be made by changing selected I/O modules and extension modules.

| Number of I/O points |  | CPU module |  |  | Input/output module |  | Connector conversion module | Input/output module |  | 1/0 <br> total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Input | Output | Module model | Input | Output | Input | Output |  | Input | Output |  |

# Input/output devices for voltage and current 

Analog input/output devices can be used to input and output analog amount of voltage, current, etc.
Analog control essential for FA control can easily be implemented by the PLC.
(For supporting low voltage input of 0 to $10 \mathrm{mV} \mathrm{DC}$,0 to 100 mV DC, refer to $\mathrm{FX} 3 \mathrm{U}-4 \mathrm{LC}$ for "input device for temperature sensor".)

## List of analog input/output devices

Analog input expansion adapter (A/D conversion)

| Model (Number of channels) | Input specifications |  |  | Isolation | Compatible CPU module |  | Analog input points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Item | Input current | Input voltage |  | FX5U | FX5UC |  |
|  | Input range | $\begin{array}{\|l\|} \hline-20 \text { to }+20 \mathrm{~mA} \mathrm{DC} \\ \text { (Input resistance } 250 \Omega \text { ) } \\ \hline \end{array}$ | -10 to +10 V DC <br> (Input resistance 1 M ) | Between input terminal and PLC: <br> Photocoupler isolation <br> Between input channels: <br> No isolation |  |  |  |
|  | Resolution | $1.25 \mu \mathrm{~A}(20 \mathrm{~mA} \times 1 / 16000)$ $1.25 \mu \mathrm{~A}((20-4) \mathrm{mA} \times 1 / 12800)$ $2.5 \mu \mathrm{~A}(20-(-20) \mathrm{mA} \times 1 / 16000)$ | $\begin{aligned} & 625 \mu \mathrm{~V}(10 \mathrm{~V} \times 1 / 16000) \\ & 312.5 \mu \mathrm{~V}(5 \mathrm{~V} \times 1 / 16000) \\ & 312.5 \mu \mathrm{~V}((5-1) \mathrm{V} \times 1 / 12800) \\ & 1250 \mu \mathrm{~V}(10-(-10) \mathrm{V} \times 1 / 16000) \end{aligned}$ |  | 0 | 0 | 4 points (4 ch) |

## Analog output expansion adapter (D/A conversion)

| Model <br> (Number of channels) | Output specifications |  |  | Isolation | Compatible CPU module |  | Analog output points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Items | Output current | Output voltage |  | FX5U | FX5UC |  |
| FX5-4DA-ADP (4 ch) | Output range | 0 to 20 mA DC <br> (External load resistance value 0 to <br> $500 \Omega$ ) | $\begin{aligned} & -10 \text { to }+10 \mathrm{~V} \text { DC } \\ & (\text { (External load resistance value } \\ & 1 \mathrm{k} \Omega \text { to } 1 \mathrm{M} \Omega \text { ) } \\ & \hline \end{aligned}$ | Between output terminal and PLC: <br> Photocoupler isolation <br> Between output channels: <br> No isolation | 0 | 0 | 4 points (4 ch) |
|  | Resolution | $\begin{aligned} & 1.25 \mu \mathrm{~A}(20 \mathrm{~mA} \times 1 / 16000) \\ & 1 \mu \mathrm{~A}((20-4) \mathrm{mA} \times 1 / 16000) \end{aligned}$ | $\begin{aligned} & 625 \mu \mathrm{~V}(10 \mathrm{~V} \times 1 / 16000) \\ & 312.5 \mu \mathrm{~V}(5 \mathrm{~V} \times 1 / 16000) \\ & 250 \mu \mathrm{~V}((5-1) \mathrm{V} \times 1 / 16000) \\ & 1250 \mu \mathrm{~V}(10-(-10) \mathrm{V} \times 1 / 16000) \\ & \hline \end{aligned}$ |  |  |  |  |

Analog input module (A/D conversion)

| Model (Number of channels) | Input speciications |  |  | Isolation | Compatible CPU module |  | Analog input points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Items | Input current | Input voltage |  | FX5U | FX5UC |  |
| FX3U-4AD (4 ch) | Input range | -20 to $+20 \mathrm{~mA} \mathrm{DC}, 4$ to 20 mA DC (Input resistance $250 \Omega$ ) | $\begin{array}{\|l\|} \hline-10 \mathrm{to}+10 \mathrm{~V} \text { DC } \\ \text { (Input resistance } 200 \mathrm{k} \Omega \text { ) } \\ \hline \end{array}$ | Between input terminal and PLC: Photocoupler isolation Between input channels: No isolation | O* | O* | 4 points (4 ch) |
|  | Resolution | $1.25 \mu \mathrm{~A}(40 \mathrm{~mA} \times 1 / 32000)$ | $320 \mu \mathrm{~V}(20 \mathrm{~V} \times 1 / 64000)$ |  |  |  |  |

*: Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC

## Analog output module (D/A conversion)

| Model (Number of channels) | Output specifications |  |  | Isolation | Compatible CPU module |  | Analog output points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Items | Output current | Output voltage |  | FX5U | FX5UC |  |
| FX3U-4DA (4 ch) | Output range | 0 to $20 \mathrm{~mA} \mathrm{DC}, 4$ to 20 mA DC (External load resistance value $500 \Omega$ or less) | $-10 \text { to +10 V DC }$ <br> (external load resistance value $1 \mathrm{k} \Omega$ to $1 \mathrm{M} \Omega$ ) | Between output terminal and PLC: Photocoupler isolation Between output channels: No isolation | O* | O* | 4 points <br> (4 ch) |
|  | Resolution | $0.63 \mu \mathrm{~A}(20 \mathrm{~mA} \times 1 / 32000)$ | $320 \mu \mathrm{~V}(20 \mathrm{~V} \times 1 / 64000)$ |  |  |  |  |

*: Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC.
$\diamond$ FX5U CPU module

Built-in analog input

## FX5-4AD-ADP type expansion adapter

## Features

1) High-precision analog input adapter with resolution of 14 bits binary.
2) 4-channel voltage input (-10 to +10 V DC) or current input $(-20$ to $+20 \mathrm{~mA} \mathrm{DC})$ is allowed.
3) Voltage or current input can be specified for each channel.
4) Data can be transferred programless (no dedicated instructions).

## Specifications

| Items | Specifications |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Analog input points | 4 points (4 channels) |  |  |  |
| Analog input voltage | -10 to +10 V DC (input resistance $1 \mathrm{M} \Omega$ ) |  |  |  |
| Analog input current | -20 to +20 mA DC (input resistance $250 \Omega$ ) |  |  |  |
| Digital output value | 14-bit binary value |  |  |  |
| Input characteristics, resolution*1 |  | Analog input range | Digital output value | Resolution |
|  |  | 0 to 10 V | 0 to 16000 | 625 V |
|  |  | 0 to 5 V | 0 to 16000 | $312.5 \mu \mathrm{~V}$ |
|  |  | 1 to 5 V | 0 to 12800 | $312.5 \mu \mathrm{~V}$ |
|  |  | -10 to +10 V | -8000 to +8000 | 1250 V |
|  | ¢ | 0 to 20 mA | 0 to 16000 | $1.25 \mu \mathrm{~A}$ |
|  |  | 4 to 20 mA | 0 to 12800 | $1.25 \mu \mathrm{~A}$ |
|  |  | -20 to +20 mA | -8000 to +8000 | $2.5 \mu \mathrm{~A}$ |
| Accuracy (Accuracy in respect to full-scale digital output value) | Ambient temperature $25 \pm 5^{\circ} \mathrm{C}$ : within $\pm 0.1 \%$ ( $\pm 16$ digits) Ambient temperature 0 to $55^{\circ} \mathrm{C}$ : within $\pm 0.2 \%$ ( $\pm 32$ digits) Ambient temperature -20 to $0^{\circ} \mathrm{C}^{* 2}$ : within $\pm 0.3 \%$ ( $\pm 48$ digits) |  |  |  |
| Absolute maximum input | Voltage: $\pm 15 \mathrm{~V}$, Current: $\pm 30 \mathrm{~mA}$ |  |  |  |
| Conversion speed | Up to $450 \mu$ ( data refreshed every operation cycle) |  |  |  |
| Isolation | Between input terminal and PLC: Photocoupler isolation Between input channels: No isolation |  |  |  |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product |  |  |  |
| Number of occupied input/output points | 0 points (no points occupied) |  |  |  |
| Number of connectable modules | FX5U, FX5UC: Up to 4 modules to the left side of CPU module |  |  |  |
| External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $17.6 \times 106 \times 89.1$ |  |  |  |
| MASS (Weight): kg | Approx. 0.1 |  |  |  |

## FX5-4DA-ADP type expansion adapter

## Features

1) High-precision analog output adapter with resolution of 14 bits binary.
2) 4-channel voltage output $(-10$ to $+10 \mathrm{~V} \mathrm{DC})$ or current output ( 0 to 20 mA DC ) is allowed.
3) Voltage or current output can be specified for each channel.
4) Data can be transferred programless (no dedicated instructions).

## Specifications

| Items | Specifications |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Analog output points | 4 points (4 channels) |  |  |  |
| Digital input | 14-bit binary value |  |  |  |
| Analog output voltage | -10 to +10 V DC (external load resistance value $1 \mathrm{k} \Omega$ to $1 \mathrm{M} \Omega$ ) |  |  |  |
| Analog output current | 0 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{(external} \mathrm{load} \mathrm{resistance} \mathrm{value} 0$ to $500 \Omega$ ) |  |  |  |

| Number of connectable modules | FX5U, FX5UC: Up to 4 modules to the left side of CPU module |  |  |  |
| External dimensions $W \times H \times D(m m)$ | $17.6 \times 106 \times 89.1$ |  |  |  |
| MASS (Weight): kg | Approx. 0.1 |  |  |  |

*1: For details on the output conversion characteristic, refer to manuals of each product.
*2: The ambient temperature specification is 0 to $55^{\circ} \mathrm{C}$ for products manufactured earlier than June 2016.

## FX3U-4AD type analog input module

Features

1) High-precision analog input module with resolution of 15 bits binary + 1-bit sign (voltage) and 14 bits binary + 1-bit sign (current).
2) 4-channel voltage input (-10 to +10 V DC) or current input (-20 to +20 mA DC, 4 to 20 mA DC$)$ is allowed.
3) Voltage or current input can be specified for each channel.
4) High-speed AD conversion of $500 \mu \mathrm{~s} /$ ch has been implemented.
5) Various functions such as digital filter function and peak value hold function have been provided.

## Specifications

| Items | Input voliage | Input curent |
| :---: | :---: | :---: |
| Analog input range | $\begin{array}{\|l\|} \hline-10 \mathrm{to}+10 \mathrm{~V} \mathrm{DC} \\ \text { (Input resistance } 200 \mathrm{k} \Omega \text { ) } \\ \hline \end{array}$ | -20 to +20 mA DC, 4 to 20 mA (Input resistance $250 \Omega$ ) |
| Effective digital output | 15 bits binary + 1-bit sign | 14 bits binary +1 -bit sign |
| Resolution | $0.32 \mathrm{mV}(20 \mathrm{~V} \times 1 / 64000)$ | $1.25 \mu \mathrm{~A}(40 \mathrm{~mA} \times 1 / 32000)$ |

| Conversion speed | $500 \mu \mathrm{~s} \times$ Number of channels ( $5 \mathrm{~ms} \times$ Number of channels used when digital fiter is used) |  |
| Isolation | Use of photocoupler for isolation between analog input and PLC <br> Use of $\mathrm{DC} / \mathrm{DC}$ converter for isolation between analog input and power supply <br> (No isolation between channels) |  |
| Power supply | 5 V DC 110 mA (PLC internal power feed) $24 \mathrm{VDC} \pm 10 \% 90 \mathrm{~mA} / 24 \mathrm{~V}$ DC (external power feed) |  |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product <br> Connection with FX5U requires FX5-CNV-BUS, and connection with FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |  |
| Number of occupied input/ output points | 8 points (Either input or output is available for counting) |  |
| Communication with PLC | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |  |
| Number of connectable modules | FX5U : Up to 8 modules when FX3U extension power supply modules are used <br> Up to 6 modules when FX3U extension power supply modules are not used FX5UC: Up to 6 modules |  |
| External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $55 \times 90 \times 87$ |  |
| MASS (Weight): kg | Approx. 0.2 |  |

## FX3U-4DA type analog output module

## Features

1) High-precision analog output module with resolution of 15 bits binary + 1-bit sign (voltage) and 15 bits binary (current).
2) 4-channel voltage output (-10 to + 10 V D ) or current output ( 0 to 20 mA $\mathrm{DC}, 4$ to 20 mA DC ) is allowed.
3) Voltage or current output can be specified for each channel.
4) Various functions such as table output function and upper-limit/ lower-limit value function have been provided.

## Specifications

| liems | Output voliage | Output current |
| :---: | :---: | :---: |
| Analog output range | -10 to +10 V DC <br> (External load $1 \mathrm{k} \Omega$ to $1 \mathrm{M} \Omega$ ) | 0 to 20 mA DC, 4 to 20 mA DC <br> (External load $500 \Omega$ or less) |
| Effective digital input | 15 bits binary + 1-bit sign | 15-bit binary value |
| Resolution | $0.32 \mathrm{mV}(20 \mathrm{~V} \times 1 / 64000)$ | $0.63 \mu \mathrm{~A}(20 \mathrm{~mA} \times 1 / 32000)$ |
| Total precision | Ambient temperature $25 \pm 5^{\circ} \mathrm{C}$ <br> $\pm 0.3 \%( \pm 60 \mathrm{mV}$ ) in respect to full-scale 20 V <br> Ambient temperature 0 to $55^{\circ} \mathrm{C}$ <br> $\pm 0.5 \%( \pm 100 \mathrm{mV})$ in respect to full-scale 20 V | Ambient temperature $25 \pm 5^{\circ} \mathrm{C}$ $\pm 0.3 \%( \pm 60 \mu \mathrm{~A})$ in respect to full-scale 20 mA Ambient temperature 0 to $55^{\circ} \mathrm{C}$ $\pm 0.5 \%( \pm 100 \mu \mathrm{~A})$ in respect to full-scale 20 mA |
| Conversion speed | 1 ms (unrelated to the number of channels used) |  |
| Isolation | Use of photocoupler for isolation between analog output and PLC Use of DC/DC converter for isolation between driving power supply and analog output (No isolation between channels) |  |
| Power supply | 5 V DC 120 mA (PLC internal power feed) 24 V DC $\pm 10 \% 160 \mathrm{~mA} / 24 \mathrm{~V}$ DC (external power feed) |  |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product Connection with FX5U requires FX5-CNV-BUS, and connection with FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |  |
| Number of occupied input/ output points | 8 points (Either input or output is available for counting) |  |
| Communication with PLC | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |  |
| Number of connectable modules | FX5U : Up to 8 modules when FX3U extension power supply modules are used <br> Up to 6 modules when FX3U extension power supply modules are not used <br> FX5UC: Up to 6 modules |  |

| MASS (Weight): kg | Approx. 0.2 |  |

Built-in analog input/output function of FX5U CPU module

## Features

1) FX5U CPU module has built-in analog input/output. It contains 2-channel analog input and 1-channel analog output.

Specifications (built-in analog input/output only)

| Items |  | Specifications |
| :---: | :---: | :---: |
| A/D part | Analog input | 0 to 10 V DC (Input resistance $115.7 \Omega$ ) |
|  | Absolute maximum input | $-0.5 \mathrm{~V},+15 \mathrm{~V}$ |
|  | Digital output value | 0 to 4000 |
|  | Digital output | Unsigned 12-bit binary |
|  | Maximum resolution | 2.5 mV |

## Input device for temperature sensor

Platinum resistance thermometer sensor (Pt100) or thermocouple temperature sensors can be connected. FX3U-4LC type temperature control module, which provides PID control function with auto tuning, can use a function of intelligent function module to perform temperature control.

List of devices for temperature sensor input

| Model <br> (Number of channels) | Available sensor | Input specifications |  | Isolation | Compatible CPU module |  | Number of channels |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Items | Temperature input |  | FX5U | FX5UC |  |
| FX3U-4LC (4 ch) | Platinum resistance thermometer sensor Pt100, JPt100, Pt1000 | Input range | [Typical example] <br> Pt100: -200 to $600^{\circ} \mathrm{C}$ <br> Pt1000: -200.0 to $650.0^{\circ} \mathrm{C}$ | Between internal circuit and channel: Isolation Between internal circuit and power supply: Isolation Between channels: Isolation | O* | O* | 4 ch |
|  |  | Resolution | $0.1^{\circ} \mathrm{C}$ or $1^{\circ} \mathrm{C}$ <br> (differs depending on the sensor used) |  |  |  |  |
|  | Thermocouple K/J/R/S/ET/B/N/PLII/W5Re/W26Re/U/L type | Input range | [Typical example] <br> K type: -200.0 to $1300^{\circ} \mathrm{C}$ <br> $J$ type: -200.0 to $1200^{\circ} \mathrm{C}$ |  |  |  |  |
|  |  | Resolution | $0.1^{\circ} \mathrm{C}$ or $1^{\circ} \mathrm{C}$ <br> (differs depending on the sensor used) |  |  |  |  |
|  | Low voltage input | Input range | 0 to 10 mV DC 0 to 100 mV DC |  |  |  |  |
|  |  | Resolution | $0.5 \mu \mathrm{~V}$ or $5.0 \mu \mathrm{~V}$ |  |  |  |  |

[^8]Features

1) The module provides 4-ch temperature sensor input and control output through which "two-position control, standard PID control (auto-tuning possible), heating/cooling PID control, and cascade control" can be carried out. It can also be used in combination with an analog input/output module to perform PID control by voltage and current.
2) The module is equipped with cascade control. The module can use 2 control loops (master and slave) to perform rapid temperature control in response to temperature change due to disturbance, etc.
3) Heating/cooling PID control of up to 4 loops can be performed by output operation of 2 systems (heating output and cooling output). Temperature control can be achieved with high stability in both the heating and cooling sides.
4) Low voltage signals such as "0-10 mV DC" and "0-100 mV DC" can be input. Sensors such as low voltage output sensor can directly be connected.
5) The module supports a wide range of thermocouple temperature sensor and high-precision Pt1000 temperature sensor.

Specifications

| Items | Details |
| :---: | :---: |
| Control system | Two-position control, standard PID control, heating/cooling PID control, and cascade control |
| Control operation cycle | $250 \mathrm{~ms} / 4 \mathrm{ch}$ |
| Setting temperature range* | K: -200.0 to $1300^{\circ} \mathrm{C}\left(-100\right.$ to $\left.2400^{\circ} \mathrm{F}\right)$ J: -200.0 to $1200^{\circ} \mathrm{C}\left(-100\right.$ to $\left.2100^{\circ} \mathrm{F}\right)$ <br> Low voltage input: 0 to 10 mV DC, 0 to 100 mV DC Pt100 (3-wire type): -200.0 to $600.0^{\circ} \mathrm{C}\left(-300.0\right.$ to $\left.1100^{\circ} \mathrm{F}\right)$ Pt100 (2-/3-wire type): -200.0 to $650.0^{\circ} \mathrm{C}\left(-328\right.$ to $1184^{\circ} \mathrm{F}$ ) |
| Heater disconnection detection | Detection of alarm by buffer memory (variable in the range from 0.0 to 100.0 A) |
| No. of input points | 4 points |
| 亏ַ | [Thermocouple] K, J, R, S, E, T, B, N, PLII, W5Re/W26Re, U, L [Resistance thermometer sensor]] 3 -wire type Pt100 3-wire type Pt100 2-/3-wire type Pt1000 [Low voltage input] 0 to 10 mV DC, 0 to 100 mV DC |
|  | [With ambient temperature $25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ ] <br> When the input range of K -type thermocouple is $500^{\circ} \mathrm{C}$ or more: $\pm 0.3 \%$ ( $\pm 1$ digit) in respect to full-scale [With ambient temperature 0 to $55^{\circ} \mathrm{C}$ ] <br> When the input range of K -type thermocouple is $500^{\circ} \mathrm{C}$ or more: $\pm 0.7 \%$ ( $\pm 1$ digit) in respect to full-scale |
| Example of resolution* | $0.1^{\circ} \mathrm{C}\left(0.1^{\circ} \mathrm{F}\right), 1^{\circ} \mathrm{C}\left(1^{\circ} \mathrm{F}\right), 0.5 \mu \mathrm{~V}$, or $5.0 \mu \mathrm{~V}$ |
| Sampling cycle | $250 \mathrm{~ms} / 4 \mathrm{ch}$ |
| Operation at the time of input disconnection/ short-circuit | Up scale/down scale (at the time of resistance thermometer sensor input) |
| Current detector (CT) input specification | Number of points: 4 <br> Current detector: CTL-12-S36-8, CTL-12-S56-10, <br> CTL-6-P-H (manufactured by U.R.D. Ltd.), sampling cycle: 0.5 sec . |
| Output specifications | Number of points: 4 <br> Type: NPN open collector transistor, Rated load voltage: 5 to 24 V DC, <br> Maximum load current: 100 mA , Control output cycle: 0.5 to 100.0 sec . |
| Power supply | 5 V DC 160 mA (internal power feed from CPU module) <br> 24 V DC $+20 \%-15 \% 50 \mathrm{~mA}$ (external power feed from terminal block) |
| Isolation | Use of photocoupler for isolation between analog inputs/transistor outputs and PLC <br> Use of $\mathrm{DC} / \mathrm{DC}$ converter for isolation between analog inputs/transistor outputs and power supply Isolation between channels |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Communication with PLC | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |
| Number of connectable modules | FX5U : Up to 8 modules when FX3U extension power supply modules are used Up to 6 modules when FX3U extension power supply modules are not used FX5UC: Up to 6 modules |
| External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $90 \times 90 \times 86$ |
| MASS (Weight): kg | Approx. 0.4 |

[^9]
## High speed counter

Using high-speed counters allow PLC to capture high-speed signals from encoders and sensors.
Since the CPU module has built-in high performance high-speed counters, high-speed control is possible with simple programs.

## List of high-speed counters

Built-in high-speed counter functions of CPU module

| Model | Model | Maximum frequency | Operation mode | High-speed processing instruction |
| :---: | :---: | :---: | :---: | :---: |
| FX5U/FX5UC | 1 phase, 1 input (S/W) | 200 kHz | - Normal mode <br> - Pulse density measurement mode <br> - Rotation speed measurement mode | - 32-bit data comparison set <br> - 32-bit data comparison reset <br> - 32-bit data band comparison <br> - 16-bit data high-speed input/output function start/stop <br> - 32-bit data high-speed input/output function start/stop |
|  | 1 phase, 1 input (H/W) | 200 kHz |  |  |
|  | 1 phase, 2 input | 200 kHz |  |  |
|  | 2 phase, 2 input [ 1 edge count] | 200 kHz |  |  |
|  | 2 phase, 2 input [2 edge count] | 100 kHz |  |  |
|  | 2 phase, 2 input [4 edge count] | 50 kHz |  |  |
|  | Internal clock | 1 MHz (fixed) |  |  |

*: For details, refer to the programming manual and hardware manual of each product.

## High-speed counter of FX5U/FX5UC CPU module

High speed counters use parameters to make input allocation and function settings and use HIOEN instruction to perform operations.

## Built-in high-speed counter input allocation

Parameter is used to set the input device allocation of high-speed counters.
Parameter is used to set the function for each channel, and input device allocation is determined by the settings. When internal clock is used, the allocation is the same as that of 1 phase, 1 input (S/W), without using phase A.

| CH | Type of high-speed counter | X0 | X1 | X2 | X3 | X4 | X5 | X6 | X7 | X10 | X11 | X12 | X13 | X14 | X15 | X16 | X17 |

[^10]
## Input assignment and the maximum frequency for each input assignment of the high-speed pulse input/output module

" $\square$ " of each input represents the prefix input number of the high-speed pulse input/output module.
"X $\square+6$ " and "X $\square+7$ " are input frequency up to 10 kHz without regard to the maximum frequency value.
The "preset" input and "enable" input are input frequency up to 10 kHz without regard to the maximum frequency value.

| CH | High-speed counter type | X $\square$ | X $\square+1$ | $X \square+2$ | $X \square+3$ | $x \square+4$ | $X \square+5$ | $x \square+6$ | $x \square+7$ | Maximum frequency |

| CH 9 to CH 16 | Internal clock | Not used |  |  |  |  |  |  |  |  |

A: Phase A input
B: Phase B input (For 1-phase 1-input (H/W): direction change input)
P: External "preset" input (Use or nonuse can be selected for each channel using parameters.)
E: External "enable" input (Use or nonuse can be selected for each channel using parameters.)

## High-speed counter module

| Model (Number of channels) | Type | Highest response frequency | Function | Hardware comparison output function | 2-phase counter edge count function | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | FX5U | FX5UC |
| FX3U-2HC (2 ch) | 1 phase 1 input | Max. 200 kHz | With match output (delay of up to $30 \mu \mathrm{~s}$ ) function <br> Output type: Output common to sink/source 2 points/channel | 0 |  | ○* <br> Up to 2 modules | O* <br> Up to 2 modules |
|  | 1 phase 2 input | Max. 200 kHz |  |  |  |  |  |
|  | 2 phase 2 input | 1 edge count: Max. 200 kHz 2 edge count: Max. 100 kHz 4 edge count: Max. 50 kHz |  |  | 0 |  |  |

[^11]Features

1) Input of 2-ch high-speed signal can be made in a module to count a maximum of 200 kHz . Each channel is equipped with 2 high-speed output terminal points based on the setting of comparison value received from CPU module.
2) In 2-phase input, 1/2/4 edge count mode can be set.
3) Counting can be permitted/inhibited in CPU module or external input.
4) Connection with an encoder of line driver output type can be made.
5) Employment of a connector system for connection with input/output signals makes the module compact. Available connection connectors include "FX-I/O-CON2-S and FX-I/O-CON2-SA". (The customer is requested to prepare the distribution cables.)

## Specifications

| Items | Specifications |
| :---: | :---: |
| No. of input points | 2 points |
| Signal level | According to connection terminals, $5 \mathrm{VDC}, 12 \mathrm{VDC}$ and 24 V DC are selectable. The line driver output type is connected to the 5 V terminal. |
| Frequency | 1 phase, 1 input: 200 kHz or less <br> 1 phase, 2 input: 200 kHz or less <br> 2 phase, 2 input: 200 kHz or less/1 edge count, 100 kHz or less/2 edge count, 50 kHz or less/4 edge count |
| Counting range | Binary signed 32 bits ( $-2,147,483,648$ to $+2,147,483,647$ ) or binary unsigned 16 bits (0 to 65,535) |
| Count mode | Automatic up/down (with 1 phase 2 input or 2 phase input, or selected up/down (with 1 phase 1 input) |
| Match output | When the current value of the counter matches a comparison set value, comparison output is set within $30 \mu \mathrm{~s}$ (ON), and cleared (OFF) within $100 \mu \mathrm{~s}$ by reset instruction. |
| Output type | 2 points/ch, 5 to 24 V DC 0.5 A (output common to sink/source) |
| Additional function | Buffer memory is available to set mode and comparison data from the CPU module. Current value, comparison results, and error status can be monitored via the CPU module. |
| Current consumption | 5 V DC 245 mA (internal power feed from CPU module) |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Communication with PLC | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |
| Number of connectable modules | FX5U, FX5UC: Up to 2 modules |
| External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $55 \times 90 \times 87$ |
| MASS (Weight): kg | Approx. 0.2 |

## FX5-16ET/ES $\square$-H type high-speed pulse input/output module

## Features

1) Input of high-speed pulses can be counted ( $2 \mathrm{ch}, 200 \mathrm{kHz}$ ).
2) The high-speed counter function and the positioning function can be used together (2 ch +2 axes). The terminals not assigned can be used as general-purpose input/ output.

## Specifications

| Items |  |  |
| :--- | :--- | :--- |
| High-speed pulse input |  | 2 ch |
| $\begin{array}{l}\text { Input response } \\ \text { frequency }\end{array}$ |  | $\mathrm{X} \square$ to $\mathrm{X} \square+5^{*}$ |$) 200 \mathrm{kHz}$, Specifications

*: " $\square$ " represents the prefix input number of each high-speed pulse input/output module.

## Positioning control

In addition to CPU module built－in positioning instructions，a pulse output module has been prepared to achieve full－scale positioning control．Furthermore，simple motion modules，which can perform complicated control as well as even multi－axis／interpolation control，are lined up to support positioning control．

## Built－in pulse output function of CPU module，positioning instructions list

Built－in pulse output function of CPU module

|  | Model／feature | Items | Function |
| :---: | :---: | :---: | :---: |
|  | FX5U／FX5UC | Number of control axes | 4 axes＊（Simple linear interpolation by 2－axis simultaneous start） |
|  |  | Maximum frequency | 2147483647 （200 kpps in pulses） |
|  |  | Positioning program | Sequence program，Table operation |
|  |  | Compatible CPU module | Transistor output type |
|  | The module is equipped with positioning function for 4 －axis pulse output and 8 －ch of high－speed pulse input． | Pulse output instruction | PLSY and DPLSY instructions |
|  |  | Positioning instruction | DSZR，DDSZR，DVIT，DDVIT，TBL，DRVTBL，DRVMUL，DABS，PLSV，DPLSV， DRVI，DDRVI，DRVA，and DDRVA instructions |

＊：The number of control axes is 2 when the pulse output mode is CW／CCW mode．

*1: Connection to FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.
*2: 8 ch word data and 8 ch bit data can be displayed in real time.

List of positioning operation modes
To confirm detailed operation of each module, refer to manuals of the product.

| Positioning instruction Operation pattern | Details | FX5U, FX5UC | FX5-16ET/ED-H | FX3U-1PG | FX5-40SSC-S |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | While the forward rotation/reverse rotation instruction input is ON, the motor performs forward rotation/reverse rotation. | $\underset{* 1}{0}$ | $\underset{*}{\circ}$ | $\bigcirc$ | 0 |
| Machine home position return | The module starts operation at a home position return speed according to the machine home position return start instruction and then outputs clear signal after the end of machine home position return. | $\stackrel{\circ}{*}$ | $\stackrel{\circ}{*}$ | $\underset{* 2 * 3}{\circ}$ | $\underset{* 2 * 4}{\circ}$ |
| - 1-speed positioning | The module starts operation at an operation speed according to start instruction and then stops at a target position. | 0 | $\bigcirc$ | $\bigcirc$ | 0 |
| - 2-speed operation (2-speed positioning) | The module moves at operation speed (1) for amount of movement (1) and then moves at operation speed (2) for amount of movement (2) according to start instruction. | $\stackrel{\circ}{\circ}$ | $\stackrel{\circ}{*}$ | 0 | 0 |
| Multi-speed operation | Multi-speed operation can be achieved by performing continuous trajectory control of multiple tables. <br> The diagram at left shows continuous trajectory control of 3 tables. | $\underset{* 5}{\circ}$ | $\underset{* 5}{\bigcirc}$ | $\times$ | 0 |
| - Interrupt stop | The module starts operation according to start instruction and then stops at the target position. When interrupt input is ON, the module decelerates and stops. | 0 | 0 | 0 | $\times$ |
| - Interrupt and 1-speed positioning (interrupt and 1 -speed pitch feed) | When interrupt input is ON , the module moves at the same speed for the specified amount of movement, and then decelerates and stops. | 0 | 0 | 0 | $\bigcirc$ |
| Interrupt and 2-speed positioning (interrupt and 2-speed pitch feed) | When interrupt input (1) is ON , the module decelerates to the 2nd speed. When interrupt input (2) is ON again, the module moves only for the specified amount of movement, and then decelerates and stops. | $\underset{* 6}{\bigcirc}$ | $\underset{* 6}{\bigcirc}$ | 0 | 0 |

[^13]

Built-in positioning function of FX5U/FX5UC CPU module

Features

1) Can position up to 4 axes using transistor outputs (Y000, Y001, Y002 and Y003) of the CPU module.
2) Can output pulse trains of 200 kpps maximum.
3) Can realize a reasonable system configuration because the intelligent function module for positioning is not required.
4) Change of the speed and positioning address can be made during positioning operation.
5) Supports the simple linear interpolation operation.

## Specifications

| Items | Specifications |
| :--- | :--- |
| Number of control axes | 4 axes* (Simple linear interpolation possible by 2-axis simultaneous start) |
| Maximum frequency | 2147483647 (200 kpps in pulses) |
| Positioning program | Sequence program, Table operation |
| Compatible CPU module | Transistor output type |
| Pulse output instruction | PLSY and DPLSY instructions |
| Positioning instruction | DSZR, DDSZR, DVIT, DDVIT, TBL, DRVTBL, DRVMUL, DABS, PLSV, DPLSV, DRVI, <br> DDRVI, DRVA, and DDRVA instructions |

*: The number of control axes is 2 when the pulse output mode is CW/CCW mode.

## FX5-16ET/E $\square$-H type high-speed pulse input/output module

## Features

1) Can extend the high-speed counter function (2 channels) and positioning function (2 axes) at the same time, and realize a reasonable system configuration.
2) Offers easy extension in the same way as the positioning function built in the CPU module.
3) Can output pulse trains of 200 kpps maximum.
4) Allows terminals not using the highspeed counter function or positioning function to be used for generalpurpose inputs/outputs.

## Specifications

| Items | Specifications |
| :--- | :--- |
| Number of control axes | 2 axes (Simple linear interpolation by 2-axis simultaneous start) |

| Compatible CPU module | FX5U, FX5UC from Ver. 1.030 (Serial number: $165 * * * *$ (May 2016)) <br> Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V. |
| Number of connectable <br> modules | FX5U, FX5UC: Up to 4 modules |
| External dimensions <br> W $\times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $40 \times 90 \times 83$ |
| $\mathrm{MASS}(\mathrm{Weight):} \mathrm{~kg}$ | Approx. 0.25 |

## FX3U-1PG type pulse output module

## Features

1) The module is equipped with 7 operation modes necessary for simple positioning control.
2) Pulse train of up to 200 kpps can be output.
3) Speed and target address can be changed during positioning operation to perform operation for each process.
4) Approximate S-curve acceleration/ deceleration is supported. Smooth high-speed operation can be performed.

Specifications

| Items | Specifications |
| :---: | :---: |
| Number of control axes | 1 axis |
| Instruction speed | 1 pps to 200 kpps (instruction unit can be selected from among $1 \mathrm{pps}, \mathrm{cm} / \mathrm{min}, 10 \mathrm{deg} /$ min, and inch/min) |
| Set pulse | $-2,147,483,648$ to $2,147,483,647$ (Instruction unit can be selected from pulse, $\mu \mathrm{m}$, mdeg, $10^{-4} \mathrm{inch}$. <br> In addition, magnification can be set for position data.) |
| Pulse output | Output signal format: Forward rotation (FP)/reverse rotation (RP) pulse or pulse (PLS)/ direction (DIR) can be selected. <br> Pulse output terminal: Transistor output <br> 5 to 24 V DC, 20 mA or less (photo-coupler isolation, with indication of operation by LED) |
| External input/output specification | Input: For STOP/DOG terminal, 24 V DC, 7 mA <br> For zero-point signal PGO terminal, 5 to 24 V DC, 20 mA or less <br> Output: For each of FP (forward rotation), RP (reverse rotation), and CLR (clear) terminals, 5 to 24 V DC, 20 mA or less |
| Driving power | For input signal: $24 \mathrm{~V} \mathrm{DC}$, For pulse output: 5 to 24 V DC, power consumption 35 mA or less |
| Control power | 5 V DC, 150 mA (supplied from PLC via extension cable) |
| Compatible CPU module | FX5U, FX5UC, compatible from initial product Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Communication with PLC | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |
| Number of connectable modules | FX5U : Up to 8 modules when FX3U extension power supply modules are used <br> Up to 6 modules when FX3U extension power supply modules are not used <br> FX5UC : Up to 6 modules |
| External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $43 \times 90 \times 87$ |
| MASS (Weight): kg | Approx. 0.2 |

## Advanced synchronous control

FX5-40SSC-S type simple motion module is an intelligent function module compatible with SSCNETIII/H. It can use a servo motor to perform positioning control via SSCNETIII/H compatible servo amplifier. For positioning control, refer to the relevant manual.

## FX5-40SSC-S type simple motion module

## Features

FX5-40SSC-S is equipped with 4-axis positioning function compatible with SSCNETIII/H.
By combining linear interpolation, 2-axis circular interpolation and continuous trajectory control in the program set with a table, a smooth trajectory can be easily drawn. In "synchronous control", "parameter for synchronous control" is set and synchronous control is started for each output axis to perform control in synchronization with the input axes (servo input axis, instruction generation axis*, and synchronous encoder axis).

* : The instruction generation axis is used only for instruction generation. It can be controlled independently as an axis connected to a servo amplifier. (It is not counted as a control axis.)
$\checkmark$ Specifications

|  | Items | Specifications |
| :---: | :---: | :---: |
| Number of control axes |  | 4 axes |
| Operation cycle |  | 1.777 ms |
| Interpolation function |  | Linear interpolation (4 axes maximum) |
| Control system |  | PTP (Point To Point) control, Trajectory control (both linear and arc), Speed control, Speed-position switching control, Position-speed switching control, Speed-torque control |
| Acceleration/deceleration process |  | Trapezoidal acceleration/deceleration, S-curve acceleration/ deceleration |
| Synchronous control | Input axis | Servo input axis, Synchronous encoder axis |
|  | Output axis | Cam axis (Up to 4 axes) |
| Cam control | Number of registration | Up to 64 (depending on memory capacity, cam resolution and number of coordinates) |
|  | Cam data type | Stroke ratio data type, Coordinate data type |
|  | Cam auto-generation | Cam auto-generation for rotary cutter |
| Control unit |  | mm, inch, degree, pulse |
| Number of positioning data |  | 600 data (positioning data No. 1 to 600)/ <br> axis (Can be set with MELSOFT GX Works3 or a sequence program.) |
| Backup |  | Parameters, positioning data, and block start data can be saved on flash ROM (battery-less backup) |
| Positioning control | Linear control | 1-axis linear control, 2-axis linear interpolation contro, 3-axis linear interpolation control, 4-axis linear interpolation control* (Composite speed, Reference axis speed) |
|  | Fixed-pitch feed control | 1 -axis fixed-pitch feed, 2-axis fixed-pitch feed, 3 -axis fixed-pitch feed, 4-axis fixed-pitch feed* |
|  | 2-axis circular interpolation | Sub point designation, center point designation |
|  | Speed control | 1-axis speed control, 2-axis speed control*, 3-axis speed control*, 4-axis speed control* |
|  | Speed-position switching control | INC mode, ABS mode |
|  | Position-speed switching control | INC mode |
|  | Current value change | Positioning data, Start No. for a current value changing |
|  | NOP instruction | Provided |
|  | JUMP instruction | Unconditional JUMP, Conditional JUMP |
|  | LOOP, LEND | Provided |
|  | High-level positioning control | Block start, Condition start, Wait start, Simultaneous start, Repeated start |
| Servo amplifier connection method |  | SSCNETIII/H |
| Maximum overall cable distance [m] |  | 400 |
| Maximum distance between stations [m] |  | 100 |
| 24 V DC external current consumption |  | 250 mA |
| Compatible CPU module |  | FX5U, FX5UC, compatible from initial product |
| Number of occupied input/output points |  | 8 points (Either input or output is available for counting) |
| Communication with PLC |  | Carried out by FROM/TO instruction via buffer memory (buffer memory can directly be specified) |
| Number of connectable modules |  | FX5U, FX5UC: Up to 16 modules |
| External dimensions$\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{~mm})$ |  | $50 \times 90 \times 83$ |
| MASS (Weight): kg |  | Approx. 0.3 |

*: Only reference axis speed can be specified as the interpolation speed designation method.

Advanced synchronous control
memo

## Network/Communication

MELSEC iQ-F Series can support not only high-speed networks like CC-Link but also other networks corresponding to control contents such as Ethernet and MODBUS.
In addition, communication function to easily establish simple data link between MELSEC iQ-F Series and to RS-232C and RS-485 devices is also supported.

Open field network: CC-Link

## CC-Link IE Field

## CC-Link IE Field

CC-Link IE Field is a high speed (1Gbps), high capacity open field network using Ethernet (1000BASE-T).
FX5-CCLIEF is an intelligent function module to connect the FX5 CPU module as an intelligent device station to a CC-Link IE Field network.

## FX5-CCLIEF

Features

MELSEC iQ-F Series modules can be connected as intelligent device stations in the CC-Link IE Field network.

## Specifications

| Items | Specifications |
| :---: | :---: |
| Station type | Intelligent device station |
| Station number | 1 to 120 (set by parameter or program) |
| Communication speed | 1 Gbps |
| Network topology | Line topology, star topology (coexistence of line topology and star topology is also possible), and ring topology |
| Maximum station-to-station distance | 100 m(conforms to ANSI/TIA/EIA-568-B (Category 5e)) |
| Cascade connection | Max. 20 stages |
| Communication method | Token passing |
| RX | 384 points, 48 bytes |
| Maximum number of RY | 384 points, 48 bytes |
| link points*1 $\quad$ RWr | 1024 points, 2048 bytes*2 |
| RWw | 1024 points, 2048 bytes*2 |
| Compatible CPU module | FX5U, FX5UC*3 from Ver. 1.030 <br> (Serial number: $165 * * * *$ (May 2016)) |
| Number of occupied I/O points | 8 points (Either input or output is available for counting) |
| Communication with PLC | Done by FROM/TO instruction via buffer memory (buffer memory can be directly specified) |
| Number of connectable modules | FX5U, FX5UC: Max. 1 module |
| External power supply Power supply voltage/ | 24 V DC +20\%, -15\%, ripple (p-p) 5\% or less/230 mA |
| Internal power supply Current consumption | 5 V DC/10 mA |
| Included Items | FX2NC-100MPCB power cable: (1 m, three wire) |
| External dimensions W $\times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $50 \times 90 \times 103$ |
| MASS (Weight): kg | Approx. 0.3 |

* 1: The maximum number of link points that a master station can assign to one FX5- CCLIEF module.
*2: 256 points ( 512 bytes) when the mode of the master station is online (High-Speed Mode).
*3: Connection with the FX5UC CPU module requires FX5-CNV-IFC or FX5-C1PS-5V.

## Network topology

(Line topology

[^16]
## CC-Link V2

CC-Link V2 is an open network enabling connection of various FA equipment.
A master module to set MELSEC iQ-F Series as CC-Link master, as well as an interface to connect as a CC-Link slave are available.

## FX3U-16CCL-M type CC-Link master module

Features

1) A master module setting MELSEC iQ-F Series as master station of CC-Link.
2) Up to 8 remote I/O stations and up to 8 remote device stations or intelligent device stations can be connected to a master station.

Example of system configuration with FX5U

The maximum number of remote I/O stations to be connected is 8 when connecting 80-point type CPU module and FX3U-16CCL-M.
The maximum number of remote I/O stations to be connected is less than 8 when the total number of points exceeds the maximum I/O points (512 points) due to the connection of l/O modules and intelligent function modules.

## FX3U-64CCL type CC-Link interface module

## Features

MELSEC iQ-F Series can be connected as intelligent device stations of CC-Link.

Specifications

|  | Items | Specifications |  |  |  |  |  |  |  |

[^17]
## Ethernet

Connecting FX5 to LAN (Local Area Network) via Ethernet enables various data communications and program maintenance.

## Built-in Ethernet communication

| Items |  | Specifications |
| :---: | :---: | :---: |
|  |  | FX5U / FX5UC |
| Data transmission speed |  | 100/10Mbps |
| Communication mode |  | Full duplex/Half duplex*1 |
| Interface |  | RJ45 connector |
| Transmission method |  | Base band |
| Maximum segment length (The distance between hub and node) |  | 100 m |
| Cascade connection | 100BASE-TX | Max. 2 stages*3 |
|  | 10BASE-T | Max. 4 stages*3 |
| Supported protocol |  | MELSOFT connection |
|  |  | SLMP (3E frame) |
|  |  | Socket communication |
|  |  | Predefined protocol support |
| No. of connections |  | Total of 8 connections for MELSOFT connection, SLMP, socket communication, and Predefined protocol support <br> (Up to 8 external devices are accessible to one CPU module at a time.) |
| IP address |  | Initial value: 192.168.3.250 |
| Isolation method |  | Pulse transformer isolation |
| Hub*1 |  | A hub having 100BASE-TX or 10BASE-T port*4 can be used |
| Cable used*2 | When connecting 100BASE-TX | Ethernet standard-compatible cable Category 5 or higher (STP cable) |
|  | When connecting 10BASE-T | Ethernet standard-compatible cable Category 3 or higher (STP cable) |

*1: IEEE802.3x flow control is not supported.
*2: Straight cables can be used. When connecting a CPU module with GOTs directly through Ethernet cables, crossover cables (category 5 e or less) can also be used
*3: No. of connectable stages when using a repeater hub. For the no. of connectable stages when a switching hub is in use, check with the manufacturer of the switching hub.

* 4: The ports must comply with the IEEE802.3 100BASE-TX or IEEE802.3 10BASE-T standards.

## - Outline of Functions

Remote maintenance
Remote maintenance enables comfortable remote maintenance and monitoring. Realizes flexible maintenance using Internet regardless of where base is located!

## VPN (Virtual Private Network)

This is a technology that connects networks by encrypting the communication contents. In combination with the Internet, VPN allows remotely separated networks to be accessed as if connected with each other via LAN.
*: A VPN connection senice support parther will help you support VPN system construction.

## MODBUS

## MODBUS

FX5 can be connected to various MODBUS communication devices as master station or slave station of the MODBUS communication.

## Outline of Functions

| Outine |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| - When using as a master station, a slave station can be controlled by setting parameters and MODBUS dedicated instruction [ADPRW]. |  |  |  |  |  |  |
| Functioncoode $\quad$Accosss <br> pointsFornt edge of commun <br> execution state outpur |  |  |  |  |  |  |
| ${ }_{\text {Slave station }} \downarrow$ |  |  | MODBUSaddress |  | Front edge of data storage device |  |
| ■:二- $]$ | (s1) | (s2) | (s3) | (s4) | (s5)/(d1) | (d2) |

- When using as a slave station, an automatic response can be provided by setting parameters. In addition, MODBUS address can be allocated by setting parameters.

## List of Function Codes

| Function code |  |
| :--- | :--- |
| 01 H | Coil read (multiple points possible) |
| 02 H | Input read (multiple points possible) |
| 03 H | Storage register read (multiple points possible) |
| 04 H | Input register read (multiple points possible) |
| 05 H | Coil write (1 point only) |
| 06 H | Storage register write (1 point only) |
| 0 FH | Multiple points of coil write |
| 10 H | Multiple points of storage register write |

## Sensor Solution

Sensor wire-saving system of AnyWireASLINK is easily configurable.

## FX3U-128ASL-M type AnyWireASLINK Master Module

## Characteristics

1) A master module enables MELSEC iQ-F series to be connected to the AnyWireASLINK sensor wire-saving system of Anywire Corporation.
2) For FX3U-128ASL-M type AnyWireASLINK master module, a unique transmission method of AnyWire is utilized in a transmission signal having a power supply (equiv. to 24 V DC, MAX. 2 A). It enables wire saving of max. 200 m using 4-core or 2-core power cables.
3) When using ASLINKAMP or ASLINK SENSOR, settings can be changed by a ladder program, engineering tool or GOT. Set-up changes can be done remotely.

## Safety Precautions

FX3U-128ASL-M is jointly developed/ manufactured with Anywire Corporation. Guarantee details are different from other PLC products. Refer to manuals for guarantees/ specifications.
$\diamond$ Specifications

| ltems | Speciifaations |
| :---: | :---: |
| Transmission clock | 27.0 kHz |
| Max. transmission distance (total extension length) | 200 m |
| Transmission method | DC power supply superimposing total frame/cyclic method |
| Connection configuration | Bus type (Multi-drop method, T-branch method, tree branch method) |
| Transmission protocol | Dedicated protocol (AnyWireASLINK) |
| Error control | Double verification method, checksum |
| No. of connection I/O points | Max. 128 points |
| No. of connection modules | Max. 128 modules (variable depending on current consumption) |
| Max. no of I/O points per system | No. of input points of slave module + No. of output points of slave module $\leq 128$ points |
| RAS function | Transmission line disconnection position detection function, transmission line shortage detection function, transmission power drop detection function |
| AnyWireASLINK transmission line | UL supported general-use 2-line cable NCTF, VCT $1.25 \mathrm{~mm}^{2}, 0.75 \mathrm{~mm}^{2}$, rated temperature: $70^{\circ} \mathrm{C}$ or higher) <br> UL supported genera-use electric wire $\left(1.25 \mathrm{~mm}^{2}, 0.75 \mathrm{~mm}^{2}\right.$, rated temperature: $70^{\circ} \mathrm{C}$ or higher), dedicated flat cable ( $1.25 \mathrm{~mm}^{2}, 0.75 \mathrm{~mm}^{2}$, rated temperature: $90^{\circ} \mathrm{C}$ ) |
| 24 V DC power supply line | UL supported general-use 2 -line cable (VCTF, VCT 0.75 to $2.0 \mathrm{~mm}^{2}$, rated temperature: $70^{\circ} \mathrm{C}$ or higher) <br> UL supported general-use electric wire ( 0.75 to $2.0 \mathrm{~mm}^{2}$, rated temperature: $70^{\circ} \mathrm{C}$ or higher), dedicated flat cable ( $1.25 \mathrm{~mm}^{2}, 0.75 \mathrm{~mm}^{2}$, rated temperature: $90^{\circ} \mathrm{C}$ ) |
| Compatible CPU module | Supported from the first product of FX5U or FX5UC Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC. |
| No. of occupied I/O points | 8 points (countable either by input or output) |
| Communication with PLC | Done by FROM/TO instruction via buffer memory (buffer memory can be directly specified) |
| No.of connectable modules | FX5U, FX5UC: Max. 1 module |
| External dimensions W x H x D (mm) | $43 \times 90 \times 95.5$ |
| MASS (Weight): kg | Approx. 0.2 |

Example of remote I/O allocation of the entire system

## Example of AnyWireASLINK configuration

The "total extension length" of transmission distance of the system: A + B + C $\leq 200 \mathrm{~m}$. Up to 3 terminators can be set per system and a terminator needs to be mounted to the part furthest from the master module and to a branch line exceeding 30 m .

Your requests for reduced wiring, detecting of disconnection/short circuit, setting of sensor sensitivity, and status monitoring can be satisfied by MELSEC iQ-F.

## Example of system configuration (AnyWireASLINK)

## FX3U-128ASL-M

AnyWireASLINK sensor system is connectable
Detection of short circuit and disconnection, setting of sensor sensitivity, address automatic recognition

Total extension length of $200 \mathrm{~m}^{* 1 * 2}$, Max. 128 points and Max. 128 modules*2 connectable
*1: Total extension distance including the portion of branch line $* 2$ : Subject to change based upon current consumption of each slave module

## General-purpose Communication Devices

Various communication functions can be added easily using an expansion board or expansion adapter.
Communications with data link or external serial interface device can be realized easily by adding an expansion board.

## Expansion board (for communication)

## $\diamond$ Features

1) Communication expansion board can be added to FX5U CPU module.
2) Communication function can be added inexpensively.

Refer to the following items for usage method of expansion board.

- "N:N network"
- "MC protocol"
- "Non-protocol communication"
- "Connection to peripheral device"

- "Inverter communication function"

## Specifications

| Mode/Characteristics | Items | Specifications |
| :---: | :---: | :---: |

| MASS (Weight): kg | Approx. 0.08 |

*: The communication method and communication speed vary depending upon the communication type.

## N:N Network

Using the built-in RS-485 port, RS-485 communication expansion board, or expansion adapter enables data link of 2 to 8 PLCs easily.

## RS-485 communication device

| Model | Types | Compatible CPU module |  |
| :--- | :--- | :---: | :---: |
|  |  | FX5U | FX5UC |
| FX5-485-BD | Expansion board | 0 | $\times$ |
| FX5-485ADP | Expansion adapter | 0 | 0 |
| - | Built-in RS-485 port | O | 0 |

## $\mathrm{N}: \mathrm{N}$ network function

## Features

1) Data link can be realized by a simple program for connecting up to 8 modules of FX5 or FX3.
2) The bit device ( 0 to 64 points) and word device (4 to 8 points) are automatically linked between each station. The ON/OFF state of other stations and data register values can

## System configuration example

 be obtained by the device allocated on the local station.

## Specifications of $\mathrm{N}: \mathrm{N}$ network function

| Items |  | Specifications |

[^18]
## MC Protocol

Data link of multiple PLCs can be realized by setting a CPU module or external device as a master station using MC protocol (serial communication).
Since data link is done by command from the external device, it is suitable for configuration of data management and control system by the external device as the main controller.

## RS-232C, RS-485 communication device

| Model |  | Types | Compatible CPU module |  |
| :--- | :--- | :---: | :---: | :---: |
|  |  |  | FX5UC |  |
| FX5-232-BD | Expansion board | 0 | $\times$ |  |
| FX5-232ADP | Expansion adapter | 0 | 0 |  |
| FX5-485-BD | Expansion board | 0 | $\times$ |  |
| FX5-485ADP | Expansion adapter | 0 | 0 |  |
| - | Buil-in RS-485 port | 0 | 0 |  |

## MC protocol function

## Features

1) Using the RS-485 communication device enables connection of up to 16 modules of FX5U/FX5UC, and data can be transferred according to commands from the PC.
2) Using the RS-232C communication device enables $1: 1$ data transfer with the PC.
3) Communication by the MC protocol QnA compatible 3C/4C frame can be done. (Type 1/Type 4/Type 5)

## System configuration example

1) $1: n$ connection using RS-485 communication

2) $1: 1$ connection using RS-232C communication

MC protocol function specifications

| Items |  | Specifications |
| :---: | :---: | :---: |
| Transmission standard |  | Conforming to RS-485/RS-232C standard |
| Total extension length | RS-485 | When using FX5-485ADP: 1200 m or less When using the built-in RS-485 port or FX5-485-BD: 50 m or less |
|  | RS-232C | 15 m or less |
| Communication method |  | Half-duplex bidirectional |
| Transmission speed |  | 300/600/1200/2400/4800/9600/19200/38400/57600/ 115200 bps |
| No.of connectable modules |  | Max. 16 modules |
| Protocol types |  | MC protocol (dedicated protocol) <br> 3C Frame (Type1/Type4) / <br> 4C Frame (Type1/Type4/Type5) |
| RS-485 connection device | $\begin{aligned} & \text { FX5U, } \\ & \text { FX5UC } \end{aligned}$ | Built-in RS-485 port, FX5-485-BD or FX5-485ADP |
| RS-232C connection device | $\begin{aligned} & \text { FX5U, } \\ & \text { FX5UC } \end{aligned}$ | FX5-232-BD or FX5-232ADP |
| Compatible CPU module |  | FX5U, FX5UC |

## RS-232C/RS-485 Non-protocol communication

MELSEC iQ-F Series modules can communicate with printers, code readers, measurement instruments, etc. having an interface in accordance with RS-232C/RS-485 (RS-422).
Communication is performed using sequence programs (RS2 instruction).

RS-232C communication
RS-232C communication device

| Model (No. of channels) | Communication method | Isolation | Maximum transmission distance | Control instruction | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | FX5U | FX5UC |
| FX5-232-BD (1 ch) | Half-duplex bidirectional/ Full-duplex bidirectional | No isolation (between communication line and CPU) | 15 m | RS2 instruction | (Max. 1 module) | $\times$ |
| FX5-232ADP (1 ch) |  |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional | Photocoupler isolation (between communication line and CPU) | 15 m | RS2 instruction | (Max. 2 <br> modules) | (Max. 2 <br> modules) |

## Communication specification

Refer to the specifications of each communication device for the details of RS-232C device specifications.

## System configuration

RS-485 (RS-422) communication
RS-485 (RS-422) communication device

| Model ( No. of channels) | Communication method | Isolation | Maximum transmission distance | Control instruction | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | FX5U | FX5UC |
| FX5-485-BD (1 ch) | Half-duplex bidirectional/ Full-duplex bidirectional | No isolation (between communication line and CPU) | 50 m | RS2 instruction | (Max. 1 module) | $\times$ |
| FX5-485ADP (1 ch) |  |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional | Photocoupler isolation (between communication line and CPU) | 1200 m | RS2 instruction | (Max. 2 modules) | (Max. 2 modules) |
| Built-in RS-485 port (1 ch) |  |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional | No isolation (between communication line and CPU) | 50 m | RS2 instruction | 0 | $\bigcirc$ |

## Communication specification

Refer to the specifications of each communication device for the details of RS-485 device specifications.
System configuration example

## Connection to Peripheral Devices

Installing RS-422/RS-232C communication devices enables addition of connection ports with peripheral devices. PLC programming devices such as PC and $\mathrm{HMI}(G O T)$ can be connected to the added ports.

RS-232C communication
RS-232C communication device

| Model (No. of channels) | Communication method | Isolation | Maximum transmission distance | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | FX5U | FX5UC |
| FX5-232-BD (1 ch) |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional | No isolation (between communication line and CPU) | 15 m | (Max. 1 module) | $\times$ |
| FX5-232ADP (1 ch) |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional | Photocoupler isolation (between communication line and CPU) | 15 m | (Max. 2 modules) | $\text { (Max. } 2 \text { modules) }$ |

Communication specification
Refer to the specifications of each communication device for the detailed specifications of RS-232C peripheral devices (programming protocol).

Connection cable for RS-232C communication device and peripheral devices
The main connection cables are as follows:

| Connection destination |  |
| :--- | :--- |
| DOSN PC (9-pin D-SUB) | FX-232CAB-1 |
| HMI (GOT) | Use the specific cable or wire for RS-232C connection of each HMI. |

## Concurrent use of peripheral device

Connect an engineering tool such as PC software to either one of peripheral devices to avoid programs from being changed by multiple peripheral devices.

## RS-422 (GOT) communication

RS-422 communication device

| Model (No. of channels) | Communication method | Isolation | Maximum transmission distance | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | FX5U | FX5UC |
| FX5-422-BD-GOT (1 ch) |  |  |  |  |  |
|  | Half-duplex bidirectional | No isolation (between communication line and CPU) | As per GOT specifications | (Max. 1 module) | $\times$ |

## Communication specification

Refer to the manual of GOT.

## Communication cable

Use a dedicated cable for GOT.

## Inverter Communication <br> Function

Dedicated instructions for Mitsubishi inverter protocol and communication control are built in FX5. Connecting an inverter enables simple control of inverter.

## RS-485 communication

$\checkmark$ RS-485 communication device

| Model (No. of channels) | Communication method | Isolation | Maximum transmission distance | Control instruction | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | FX5U | FX5UC |
| FX5-485-BD (1 ch) | Half-duplex bidirectional/ Full-duplex bidirectional* | No isolation (between communication line and CPU) | 50 m | Inverter instruction | (Max. 1 module) | $\times$ |
| FX5-485ADP (1 ch) |  |  |  |  |  |  |
|  | Half-duplex bidirectional/ Full-duplex bidirectional* | Photocoupler isolation (between communication line and CPU) | 1200 m | Inverter instruction | (Max. 2 modules) | (Max. 2 <br> modules) |
| Built-in RS-485 port (1 ch) |  |  |  |  |  |  |
| $A$ | Half-duplex bidirectional/ Full-duplex bidirectional* | No isolation (between communication line and CPU) | 50 m | Inverter instruction | 0 | $\bigcirc$ |

*: Half-duplex bidirection in case of connecting to inverter.
System configuration example

- Connectable Mitsubishi general-purpose inverter

## FREQROL series

[Connectable Models]
FREQROL series

In a seamless and integrated engineering environment, the total cost can be reduced!
MELSOFT Navigator is sold as a set of products including GX Works3, GT Works3 and
MT Works2 (MELSOFT iQ Works). You don't need to purchase them separately.

## melsoft GX Works3

Realize "Easy programming" and "Simple operation" while inheriting the operability of GX Works2.

melsoft Navigator
A tool to synthesize the upstream design with tools for MELSOFT iQ Works

Automatic start maintenance software When clicking the project from a system configuration diagram or work space tree, MELSOFT Navigator automatically starts up the software for that device. -

HMI Screen Creation Software
melsoft GT Works3 "Beautiful" and "User friendly".

## MELSOFT GX Works3 PLC Engineering Software

- GX Works3 $\qquad$ Model: SW1DND-GXW3-E

> A special catalog (separate booklet) of MELSOFT GX Works3 is available. (Functions shown in the catalog vary according to PLC model.) For details, refer to the following catalog available on request: "MELSOFT GX Works3 catalog" L(NA)08334ENG

## Features

- Achieving an easy and intuitive programming by only making "selections" in a graphical environment with module configuration diagram and module label/ module FB.
- Supporting various applications (parameter settings of simple motion module, creation of positioning data, parameter setting and servo adjustments of servo amplifier).
- Complying to the international standard IEC 61131-3 for engineering software and supporting the modularized and structured programming. Programming languages such as ladder, ST, FBD/ LD are available.
- Enabling transmitting/receiving of the data between an external device and the CPU module by matching the protocol of the external device. (Communication protocol support function)

## MELSOFT MX series Integrated Data Link Software

- MX Component (Communication ActiveX ${ }^{\oplus}$ Library) Model: SW4DNC-ACT-E
- MX Sheet (Excel ${ }^{\oplus}$ Communication Support Tool) Model: SW2DNC-SHEET-E
- MX Works (a set product of MX Component and MX Sheet) Model: SW2DNC-SHEETSET-E

## $\diamond$ Features

- A group of middleware remarkably improving development efficiency in the system configuration.
- Familiar Exce ${ }^{\circledR}$ settings on the screen enables easy data access of the on-site PLC without any program.
- Enabling the system to be configurable without considering a communication protocol.
- Enabling monitoring of on-site system only by setting parameters on the screen.

## PC and PLC Connection Method and Required Equipment

In case of connection between Ethernet port on the PC side
Connecting to the Ethernet port

$\diamond$ In case of connection between RS-232C port on the PC side
(1) Connection with the RS-232C port attached to PLC (using FX5-232ADP)

(2) Connection with the RS-232C port attached to PLC (using FX5-232-BD)

# Compatible Versions of Software 

The followings are compatible versions of each software.
New versions may be required due to addition of functions and products. Please refer to the manuals for more details.

| Category | Type | Compatible version |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | FX5U | FX5UC | Precautions |
| Software for PLC | iQ Works | Ver. 2.07H or above | Ver. 2.07H or above | Use the latest version when new functions are added. |
|  | GX Works3 | Ver. 1.007 H or above | Ver. 1.007H or above |  |
| Software for GOT <br> (GOT1000 series, GOT2000 series) | GT Works3 | Ver. 1.126G or above | Ver. 1.126G or above | Compatible to the device scope. Refer to the GOT manual for other compatible items. |

## Option/Related Products

We are pleased to offer you a wide variety of our products including SD memory cards, batteries, connection cables for PLC as well as interfaces for signal exchange.

## SD Memory Card

| Mode/Appearance | Contents |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| NZ1MEM-2GBSD NZ1MEM-4GBSD | NZ1MEM-2GBSD | Type | SD memory card |  |
|  |  | Capacity | 2 GB |  |
|  | NZ1MEM-4GBSD | Type | SDHC memory card |  |
|  |  | Capacity | 4 GB |  |

## Battery

| Mode/Appearance |  |  |
| :--- | :--- | :--- |
| FX3U-32BL | The battery can be used to retain (latch) the status of the device memory or clock data before a power failure. <br> At the time of delivery from the factory, the battery is not built in the CPU module. Please make arrangements if required. <br> Setting of parameter is required for power failure retention. |  |

## Option/Related Products

Extension Device
The extension cable for connecting to the right side of the front-stage device has been attached to the extension module (extension cable type).

| Mode/Characteristios | Items |  | Specifications |
| :---: | :---: | :---: | :---: |

|  | (back-stage supply) 5 V DC | 1 A (Derate the maximum output current at an ambient temperature of $40^{\circ} \mathrm{C}$ or above.) |
|  | Compatible CPU module | FX5U (AC power supply type) |
|  | No. of occupied I/O points | 0 points (No occupied points) |
|  | No. of connectable modules | Max. 2 modules |
|  | External dimensions $\mathrm{W} \times \mathrm{H} \times \mathrm{D}(\mathrm{mm})$ | $55 \times 90 \times 87$ |
|  | MASS (Weight): kg | Approx. 0.3 |

## Option/Related Products

## Extension Module Options (Extended Extension Cables/Connector Conversion Adapters)

FX5 extension modules (extension cable type) are equipped with the extension cable for connection to the right side of the front-stage device.
If intending extension of the connection distance or two-row placement of PLCs, an optional "Extended extension cable" is required. Only a single extended extension cable can be used per system.

## $\diamond$ Extended extension cable

| Model | Specifications |
| :---: | :---: |
| FX5-30EC ( 30 cm ) FX5-65EC ( 65 cm ) | $\diamond$ Extended extension cable <br> Extension cable for the FX5 extension module. <br> Only a single cable can be used per system. Depending on the CPU module to be used or the device to be connected with, the following connection conversion adapter (FX5-CNV-BC) is required. <br> [Connector conversion adapter requirement.] <br> When connected with an input/output module (extension cable type), high-speed pulse input/output module, or an intelligent function module. |
| FX5-CNV-BC | - Connector conversion adapter This connects between an extension cable and an extension cable type module when an extended extension cable is used. |

## $\diamond$ Main connection methods

1) Connections with the Powered I/O module and FX5 extension power supply module (extension cable type)

2) Connections with the input/output module (extension cable type) and FX5 intelligent function module

3) For FX5UC

## Terminal Module

This allows conversion of the connector of the FX5UC CPU module or the I/O module (extension connector type) to the terminal block (M3.5 terminal screw), resulting in the reduced no. of man-hours for I/O wiring.
Using an internal type of I/O element enables driving of a heavy load by a relay or a transistor.

Terminal module

List of Terminal Modules (Refer to the next page for the details of connection cables and optional connectors.)

| Model | No. of input points | No. of output points | Function |
| :---: | :---: | :---: | :---: |
| FX-16E-TB | Input 16 points or output 16 points |  | Directly connected to the I/O terminal of PLC. Using this module instead of the PLC terminals or relaying a wiring of I/O device located remotely from PLC enables reducing of the I/O wiring man-hours. |
| FX-32E-TB | Input 32 points or output 32 points (Division possible: input 16 points and output 16 points) Input 16 points or output 16 points |  |  |
| FX-16E-TB/UL |  |  |  |
| FX-32E-TB/UL | Input 32 points or output 32 points (Division possible: input 16 points and output 16 points) |  |  |
| FX-16EYR-TB | - | 16 | Relay Output Type |
| FX-16EYS-TB | - | 16 | Triac Output Type |
| FX-16EYT-TB | - | 16 | Transistor Output Type |
| FX-16EYR-ES-TB/UL | - | 16 | Relay Output Type |
| FX-16EYS-ES-TB/UL | - | 16 | Triac Output Type |
| FX-16EYT-ES-TB/UL | - | 16 | Transistor Output Type (Sink output) |
| FX-16EYT-ESS-TB/UL | - | 16 | Transistor Output Type (Source output) |

## Specifications

## 1. PLC Direct Connection (FX-16E-TB, FX-32E-TB)

Since it is for direct connection of PLC I/O terminal, no electrical components are built in.
Electrical specifications are equivalent to that of the connected CPU module or connector type I/O module. A drawing on the right shows the internal connection of FX-16E-TB. In case of FX-32E-TB, CN2
 is provided with the same connection.

## 2. Output (FX-16EY $\square$-TB)

| Model |  |  |  |  |  |  |  |  | Relay output | Triac output |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |

## I/O Cable

| Mode/Appearance | Contents |
| :---: | :---: |

| :---: | :---: |
| FX2NC-100MPCB (1 m) | -CPU Module Power Cable <br> Cable for providing 24 V DC power supply to FX5UC CPU module Offered as an accessory of FX5UC CPU module. |
| FX2NC-100BPCB (1 m) | - Power Cable <br> Cable for supplying 24 V DC input power supply to an extension connector type input module or input/output module. Offered as an accessory of FX5UC-पMT/D. <br> It is necessary to purchase this cable separately when using an extension connector type input module or input/output module in the FX5U system. |
| FX2NC-10BPCB1 (0.1 m) | - Power Supply Transition Cable <br> Cable for crossover wiring of 24 V DC input power supply to two or more extension connector type input modules or input/output modules. Offered as an accessory of FX5-CDEX/D and FX5-C32ET/D. |

## Overseas service system

Mitsubishi's MELSEC-F Series is a worldwide programmable controller that is used in more than 50 countries all over the world.
For local after-sales services in the overseas countries, "Mitsubishi Electric Global FA Centers" timely provide the best possible products, high technology and reliability services to our customers.

## Global FA Center

## FA Global Service Network "Place contact our FA Center first."

If you have any questions, please contact our FA Centers in each country.
FA Centers located around the world respond to various customer needs in close communication with our sales offices, branches, and distributors as key stations.

## Detailed information on overseas services

"FA Global Service" (KK001-EN)
Service contents and contact information of our FA Centers are detailed.
For more information on overseas support, please request this document.

## Certifications

## Certifications

MELSEC iQ-F Series conforms to European Standards (EN) and North American Standards (UL/cUL). Using MELSEC iQ-F Series can reduce the workload to make machines/equipment conform to EN and UL/cUL standards.

## EN Standards: Compliance with EC Directives/CE marking

EC Directives were issued by the European Council of Ministers to unify standards in the EU Community, and to ensure smooth distribution of products for which safety is ensured. Approximately 20 types of EC Directives for product safety have been issued.
Attachment of a CE mark (CE marking) is mandatory on specific products before they may be distributed in the EU. The EMC Directive (Electromagnetic Compatibility Directive) and LVD Directive (Low Voltage Directive) apply to the programmable controller, which is labeled as an electrical part of a machine product under the EC Directives.

1) EMC Directive

The EMC Directive is a directive that requires products to have "Capacity to prevent output of obstructive noise that adversely affects external devices: Emission damage" and "Capacity to not malfunction due to obstructive noise from external source: Immunity".
2) LVD Directive (Low Voltage Directive)

The LVD Directive is enforced to distribute safe products that will not harm or damage people, objects or assets, etc. With the programmable controller, this means a product that does not pose a risk of electric shock, fire or injury, etc.
ct

## $\diamond$ "ISO 9001" international standard for quality-assurance system

Mitsubishi Electric Corporation Nagoya Works has acquired "ISO 9001" international standard for quality-assurance system for the development/manufacture on the whole from order reception to shipment of all series of micro sequencer. Of the ISO 9000 series by which the International Organization for Standardization (ISO) defines the standards of quality-assurance systems, "ISO 9001" assumes a wide range of quality-assurance systems related to development, manufacture, materials, quality and sales. The MELSEC iQ-F Series is manufactured under the control system based on an internationally recognized quality-assurance system. It is also used as a registration site of "ISO 14001" environmental management system.

## UL/cUL Standards

UL is the United State's main private safety testing and certification agency for ensuring public safety.
UL sets the safety standards for a variety of fields. Strict reviews and testing are performed following the standards set forth by UL. Only products which pass these tests are allowed to carry the UL Mark.
As opposed to the EN Standards, the UL Standards do not have a legally binding effect. However, they are broadly used as the U.S. safety standards, and are an essential condition for selling products into the U.S.
UL is recognized as a certifying and testing agency by the Canadian Standards Association (CSA). Products evaluated and certified by UL in accordance with Canadian standards are permitted to carry the cUL Mark.
c US LISTED

## Conformance of FX5U and FX5UC with European Standard (EN)/North American Standard (UL/cUL)

International standards supported
MELSEC iQ-F Series conforms to the CE marking and UL/cUL Standard.

## Korean Certification Mark (KC Mark)

- The KC mark, which is a safety certification mark required to be affixed to the specified products distributed in Korea (products required to be legally certificated for safety, quality, environment, etc.), indicates compliance with various requirements.
- KC mark is indicated on FA products, which conform to the Radio Act. Note that other standards are not applicable.

## Performance specifications

FX5U/FX5UC CPU module performance specifications
$F_{50} \mathrm{FX}_{50}$

| liems |  | Speciications |
| :---: | :---: | :---: |
| Control system |  | Stored-program repetitive operation |
| Input/output control system |  | Refresh system (Direct access input/output allowed by specification of direct access input/output [DX, DY) |
| Programming specifications | Programming language | Ladder diagram (LD), structured text (ST), function block diagram/ladder language (FBD/LD) |
|  | Programming expansion function | Function block (FB), function (FUN), label programming (local/global) |
|  | Constant scan | 0.2 to 2000 ms (can be set in 0.1 ms increments) |
|  | Fixed cycle interupt | 1 to 60000 ms (can be set in $1 \mathrm{~ms} \mathrm{increments)}$ |
|  | Timer performance specifications | $100 \mathrm{~ms}, 10 \mathrm{~ms}, 1 \mathrm{~ms}$ |
|  | No. of program executions | 32 |
|  | No. of FB files | 16 (Up to 15 for user) |
| Operation specifications | Execution type | Standby type, initial execution type, scan execution type, fixed-cycle execution type, event execution type |
|  | Interrupt type | Internal timer interrupt, input interruption, high-speed comparison match interrupt, interrupt from module |
| Instruction processing time | LDXO | 34 ns |
|  | MOV DO D1 | 34 ns |
| Memory capacity | Program capacity | 64 k steps (128 kbytes, flash memory) |
|  | SD memory card | Memory card capacity (SD/SDHC memory card: Max. 4 Gbytes) |
|  | Device/abel memory | 120 kbytes |
|  | Data memory/standard ROM | 5 Mbytes |
| Flash memory (Flash ROM) write count |  | Max. 20000 times |
| File storage capacity | Device/label memory | 1 |
|  | Data memory P: No. of program files FB: No. of FB files | P: 32, FB: 16 |
|  | SD memory card | 2 Gbytes: 511*1, 4 Gbytes: 65534*1 |
| Clock function | Display data | Year, month, day, hour, minute, second, day of week (leap year automatic detection) |
|  | Precision | Monthly difference: $\pm 45 \mathrm{sec}$ at $25^{\circ} \mathrm{C}$ (typical value) |
| No. of input/output points | (1) No. of input/output points | 256 points or less |
|  | (2) No. of remote $/ / \mathrm{O}$ points | 384 points or less |
|  | Total No. of points of (1) and (2) | 512 points or less |
| Power failure retention (Clock data*2) | Retention method | Large-capacity capacitor |
|  | Retention time | 10 days (Ambient temperature: $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ ) |
| Power failure retention (Device) | Capacity for power failure retention | 12 K words maximum*3 |

*1: The value listed above indicates the number of files stored in the root folder.
*2: Clock data is retained using the power accumulated in a large-capacity capacitor incorporated into the PLC. When voltage of the large-capacity capacitor drops, clock data is no longer accurately retained. The retention period of a fully charged capacitor (electricity is conducted across the PLC for at least 30 minutes) is 10 days (ambient temperature: $25^{\circ} \mathrm{C}$ $\left(77^{\circ} F\right)$. How long the capacitor can hold the data depends on the operating ambient temperature. When the operating ambient temperature is high, the holding period is short.
*3: All devices in the (high-speed) device area can be held against power failure. Devices in the (standard) device area can be held also when the optional battery is mounted.

## Number of device points

[^19]2: Total of the index register (Z) and long index register (LZ) is maximum 24 words.

|  | DTOD(P) | Write of 2-word data from other module (32-bit specified) | $\bigcirc$ | $\bigcirc$ |

## Step ladder instruction

| Classification | Instruction symbol | Function | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | FX5U | EX5UC |
| Step ladder | STL | Start of step ladder | $\bigcirc$ | $\bigcirc$ |
|  | RETSTL | End of step ladder | $\bigcirc$ | $\bigcirc$ |

## Built-in Ethernet function instruction

| Classification | Instruction symbol | Function | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | FX5U | FXSUC |
| Built-in Ethernet function instruction | SP.SOCOPEN | Connection estabishment | $\bigcirc$ | $\bigcirc$ |
|  | SP.SOCCLOSE | Connection disconnection | $\bigcirc$ | $\bigcirc$ |
| Socket <br> Communication <br> function | SP.SOCRCV | Read of received data during END processing | $\bigcirc$ | $\bigcirc$ |
|  | SPPSOCSND | Data transmission | $\bigcirc$ | $\bigcirc$ |
|  | SP.SOCCINF | Read of connection information | $\bigcirc$ | $\bigcirc$ |
|  | S(P).SOCRDATA | Read of received data of socket communication | $\bigcirc$ | $\bigcirc$ |
| Communication protocol support function | SP.ECPRTCL | Execution of registration protocol of communication protocol support function | $\bigcirc$ | $\bigcirc$ |

## PID control instruction

| Classification | Instruction <br> symbol | Function | Compatible <br> CPU module |  |
| :--- | :--- | :--- | :---: | :---: |
|  |  | FX5UC |  |  |
|  | PID | PID operation | $\bigcirc$ | $\bigcirc$ |

## List of module dedicated instructions

| Classification | Instruction symbol | Function | Compatible CPU module |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | FX5U | FX5UC |
| CC-Link IE field network | GP.READ | Reading data from the PLC of another station | $\bigcirc$ | $\bigcirc$ |
|  | GP.SREAD | Reading data from the PLC of another station (A read notice is issued.) | $\bigcirc$ | $\bigcirc$ |
|  | GP.WRITE | Writing data to the PLC of another station | $\bigcirc$ | $\bigcirc$ |
|  | GP.SWRITE | Writing data to the PLC of another station (A write notice is issued.) | $\bigcirc$ | $\bigcirc$ |
|  | GP.SEND | Transmission of data to the PLC of another station | $\bigcirc$ | $\bigcirc$ |
|  | GP.RECV | Reception of data from the PLC of another station | $\bigcirc$ | $\bigcirc$ |
|  | G(P).CCPASET | Parameter setting | $\bigcirc$ | $\bigcirc$ |
|  | G(P).UINI | Own station number setting | $\bigcirc$ | $\bigcirc$ |
| High speed counter | DHSCS | 32-bit data comparison set | $\bigcirc$ | $\bigcirc$ |
|  | DHSCR | 32-bit comparison reset | $\bigcirc$ | $\bigcirc$ |
|  | DHSZ | 32-bit data bandwidth comparison | $\bigcirc$ | $\bigcirc$ |
|  | HIOEN(P) | Start and stop of 16 -bit data high speed input/ output function | $\bigcirc$ | $\bigcirc$ |
|  | DHIOEN(P) | Start and stop of 32-bit data high speed input/ output function | $\bigcirc$ | $\bigcirc$ |
| High-speed transfer of current value | HCMOV(P) | High-speed transfer of 16-bit data current value | $\bigcirc$ | $\bigcirc$ |
|  | DHCMOV(P) | High-speed transfer of 32 -bit data current value | $\bigcirc$ | $\bigcirc$ |
| External device communication | RS2 | Serial data transfer 2 | $\bigcirc$ | $\bigcirc$ |
| Inverter communication | IVCK | Inverter operation monitor | $\bigcirc$ | $\bigcirc$ |
|  | IVDR | Inverter operation control | $\bigcirc$ | $\bigcirc$ |
|  | IVRD | Inverter parameter read | $\bigcirc$ | $\bigcirc$ |
|  | IWWR | Inverter parameter write | $\bigcirc$ | $\bigcirc$ |
|  | IVBWR | Inverter parameter batch write | $\bigcirc$ | $\bigcirc$ |
|  | IVMC | Multiple commands of inverter | $\bigcirc$ | $\bigcirc$ |
| MODBUS | ADPRW | MODBUS data read/write | $\bigcirc$ | $\bigcirc$ |
| Communication protocol support function | S(P).CPRTCL | Execution of communication protocol registered by engineering tool | $\bigcirc$ | $\bigcirc$ |
| Positioning | DSZR | Home position return with 16-bit data dog search | $\bigcirc$ | $\bigcirc$ |
|  | DDSZR | Home position return with 32-bit data dog search | $\bigcirc$ | $\bigcirc$ |
|  | DVIT | 16-bit data interrupt positioning | $\bigcirc$ | $\bigcirc$ |
|  | DDVIT | 32-bit data interrupt positioning | $\bigcirc$ | $\bigcirc$ |
|  | TBL | Positioning by 1 -table operation | $\bigcirc$ | $\bigcirc$ |
|  | DRVTBL | Positioning by multiple-table operation | $\bigcirc$ | $\bigcirc$ |
|  | DRVMUL | Multiple axis simultaneous drive positioning | $\bigcirc$ | $\bigcirc$ |
|  | DABS | 32-bit data ABS current value read | $\bigcirc$ | $\bigcirc$ |
|  | PLSV | 16-bit data variable speed pulse | $\bigcirc$ | $\bigcirc$ |
|  | DPLSV | 32-bit data variable speed pulse | $\bigcirc$ | $\bigcirc$ |
|  | DRVI | 16-bit data relative positioning | $\bigcirc$ | $\bigcirc$ |
|  | DDRVI | 32 -bit data relative positioning | $\bigcirc$ | $\bigcirc$ |
|  | DRVA | 16-bit data absolute positioning | $\bigcirc$ | $\bigcirc$ |
|  | DDRVA | 32-bit data absolute positioning | $\bigcirc$ | $\bigcirc$ |
| BFM split read/ write | RBFM | BFM split read | $\bigcirc$ | $\bigcirc$ |
|  | WBFM | BFM split write | $\bigcirc$ | $\bigcirc$ |

## Special devices

Typical special relays and special registers are described below.
For details, refer to FX5 User's Manual (Application).

## List of special relays

## Diagnostic information

| No. | Name | FX5U | FX5UC |
| :--- | :--- | :---: | :---: |
| SM0 | Latest self diagnosis error (including annunciator ON) | $\bigcirc$ | $\bigcirc$ |
| SM1 | Latest self diagnosis error (not including annunciator ON) | $\bigcirc$ | $\bigcirc$ |
| SM50 | Error reset | $\bigcirc$ | $\bigcirc$ |
| SM51 | Battery low latch | $\bigcirc$ | $\bigcirc$ |
| SM52 | Battery low | $\bigcirc$ | $\bigcirc$ |
| SM53 | AC/DC DOWN | $\bigcirc$ | $\bigcirc$ |
| SM56 | Instruction execution fault | $\bigcirc$ | $\bigcirc$ |
| SM61 | I/O module verify error | $\bigcirc$ | $\bigcirc$ |
| SM62 | Annunciator | $\bigcirc$ | $\bigcirc$ |

## System information

| No. Name | FX5U | FX5UC |  |
| :--- | :--- | :---: | :---: |
| SM203 | STOP contact | $\bigcirc$ | $\bigcirc$ |
| SM204 | PAUSE contact | $\bigcirc$ | $\bigcirc$ |
| SM210 | Clock data set request | $\bigcirc$ | $\bigcirc$ |
| SM211 | Clock data set error | $\bigcirc$ | $\bigcirc$ |
| SM213 | Clock data read request | $\bigcirc$ | $\bigcirc$ |

## System clock

| No. | Name | FX5U | FX5UC |
| :---: | :---: | :---: | :---: |
| SM400 | Always ON | $\bigcirc$ | $\bigcirc$ |
| SM401 | Always OFF | $\bigcirc$ | $\bigcirc$ |
| SM402 | After RUN, ON for one scan only | $\bigcirc$ | $\bigcirc$ |
| SM403 | After RUN, OFF for one scan only | $\bigcirc$ | $\bigcirc$ |
| SM409 | 0.01 sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM410 | 0.1 sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM411 | 0.2 sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM412 | 1 sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM413 | 2 sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM414 | 2n sec. clock | $\bigcirc$ | $\bigcirc$ |
| SM415 | 2 nms clock | $\bigcirc$ | $\bigcirc$ |

## Instruction related

| No. | Name | FX5U | FX5UC |
| :--- | :--- | :---: | :---: |
| SM700 | Carry flag | $\bigcirc$ | $\bigcirc$ |
| SM701 | Output characters selection | $\bigcirc$ | $\bigcirc$ |
| SM703 | Sort order | $\bigcirc$ | $\bigcirc$ |
| SM704 | Block comparison | $\bigcirc$ | $\bigcirc$ |
| SM709 | DT/TM instruction improper data detection | $\bigcirc$ | $\bigcirc$ |

FX compatible area

| No. | Name | FX5U | FX5UC |
| :---: | :---: | :---: | :---: |
| SM8000 | RUN monitor NO contact | $\bigcirc$ | $\bigcirc$ |
| SM8001 | RUN monitor NC contact | $\bigcirc$ | $\bigcirc$ |
| SM8002 | Initial pulse NO contact | $\bigcirc$ | $\bigcirc$ |
| SM8003 | Initial pulse NC contact | $\bigcirc$ | $\bigcirc$ |
| SM8004 | Error occurrence | $\bigcirc$ | $\bigcirc$ |
| SM8005 | Battery voltage low | $\bigcirc$ | $\bigcirc$ |
| SM8006 | Battery error latch | $\bigcirc$ | $\bigcirc$ |
| SM8007 | Momentary power failure | $\bigcirc$ | $\bigcirc$ |
| SM8008 | Power failure detected | $\bigcirc$ | $\bigcirc$ |
| SM8011 | 10 msec clock pulse | $\bigcirc$ | $\bigcirc$ |
| SM8012 | 100 msec clock pulse | $\bigcirc$ | $\bigcirc$ |
| SM8013 | 1 sec clock pulse | $\bigcirc$ | $\bigcirc$ |
| SM8014 | 1 min clock pulse | $\bigcirc$ | $\bigcirc$ |
| SM8015 | Clock stop and preset | $\bigcirc$ | $\bigcirc$ |
| SM8016 | Time read display is stopped | $\bigcirc$ | $\bigcirc$ |
| SM8017 | $\pm 30$ seconds correction | $\bigcirc$ | $\bigcirc$ |
| SM8019 | Real time clock error | $\bigcirc$ | $\bigcirc$ |
| SM8020 | Zero | $\bigcirc$ | $\bigcirc$ |
| SM8021 | Borrow | $\bigcirc$ | $\bigcirc$ |
| SM8022 | Carry | $\bigcirc$ | $\bigcirc$ |
| SM8023 | Real time clock access error | $\bigcirc$ | $\bigcirc$ |
| SM8026 | RAMP mode | $\bigcirc$ | $\bigcirc$ |
| SM8029 | Completion of instruction execution | $\bigcirc$ | $\bigcirc$ |
| SM8031 | Completion of instruction execution | $\bigcirc$ | $\bigcirc$ |
| SM8032 | Non-latch memory all clear | $\bigcirc$ | $\bigcirc$ |
| SM8033 | Latch memory all clear | $\bigcirc$ | $\bigcirc$ |
| SM8034 | Memory hold function when RUN $\rightarrow$ STOP | $\bigcirc$ | $\bigcirc$ |
| SM8039 | All outputs prohibited | $\bigcirc$ | $\bigcirc$ |
| SM8040 | Constant scan mode | $\bigcirc$ | $\bigcirc$ |
| SM8041 | For STL: Transition prohibited | $\bigcirc$ | $\bigcirc$ |
| SM8042 | For STL: Start of operation during automatic operation | $\bigcirc$ | $\bigcirc$ |
| SM8043 | For STL: Start pulse | $\bigcirc$ | $\bigcirc$ |
| SM8044 | For STL: Completion of home position return | $\bigcirc$ | $\bigcirc$ |
| SM8045 | For STL: Home position condition | $\bigcirc$ | $\bigcirc$ |
| SM8046 | For STL: All output reset prohibited during mode switch | $\bigcirc$ | $\bigcirc$ |
| SM8047 | For STL: With STL state ON | $\bigcirc$ | $\bigcirc$ |
| SM8048 | For STL: STL monitor (SD8040 to SD8047) enabled | $\bigcirc$ | $\bigcirc$ |
| SM8049 | Annunciator operation | $\bigcirc$ | $\bigcirc$ |
| SM8063 | ON annunciator minimum number enabled | $\bigcirc$ | $\bigcirc$ |
| SM8067 | Operation error | $\bigcirc$ | $\bigcirc$ |
| SM8068 | Operation error latch | $\bigcirc$ | $\bigcirc$ |

## For serial communication

| No. | Name | FX5U | FX5UC |
| :--- | :--- | :---: | :---: |
| SM8500 | Serial communication error (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8560 | Data transfer delayed (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8561 | Data transfer flag (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8562 | Receive completion flag (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8563 | Carrier detection flag (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8564 | Data set ready flag (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8565 | Time-out check flag (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8740 | Station No. setting SD latch enabled (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8800 | MODBUS RTU communication (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8801 | Retry (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8802 | Timeout (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8861 | Host station No. setting SD latch enabled (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8920 | Inverter communication (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM8921 | IVBWR instruction error (ch1) | $\bigcirc$ | $\bigcirc$ |
| SM9040 | Data communication error (Master station) | $\bigcirc$ | $\bigcirc$ |
| SM9041 | Data communication error (Slave station No.1) | $\bigcirc$ | $\bigcirc$ |

## General, power supply, input/ output specifications

For specifications of intelligent function modules, refer to manuals of each product.

## General specifications

| Item | Specifications |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | FX5U |  |  |  |  | FX5UC |  |  |  |
| Operating ambient temperature*1 | -20 to $55^{\circ} \mathrm{C}\left(-4\right.$ to $\left.131^{\circ} \mathrm{F}\right)$, non-freezing*2*3 |  |  |  |  |  |  |  |  |
| Storage ambient temperature | -25 to $75^{\circ} \mathrm{C}\left(-13\right.$ to $167^{\circ} \mathrm{F}$, non-freezing |  |  |  |  |  |  |  |  |
| Operating ambient humidity | 5 to 95\%RH, non-condensation*4 |  |  |  |  |  |  |  |  |
| Storage ambient humidity | 5 to 95\%RH, non-condensation |  |  |  |  |  |  |  |  |
| Vibration resistance ${ }^{* 5 * 6}$ |  | Frequency | Acceleration | Half amplitude | Sweep count | Frequency | Acceleration | Half amplitude | Sweep count |
|  | Installed on DIN rail | 5 to 8.4 Hz | - | 1.75 mm | 10 times each in $X, Y, Z$ directions ( 80 min in each direction) | 5 to 8.4 Hz | - | 1.75 mm | 10 times each in $X, Y, Z$ directions <br> ( 80 min in each direction) |
|  |  | 8.4 to 150 Hz | $4.9 \mathrm{~m} / \mathrm{s}^{2}$ | - |  | 8.4 to 150 Hz | $4.9 \mathrm{~m} / \mathrm{s}^{2}$ | - |  |
|  | Direct installing | 5 to 8.4 Hz | - | 3.5 mm |  | - |  |  |  |
|  |  | 8.4 to 150 Hz | $9.8 \mathrm{~m} / \mathrm{s}^{2}$ | - |  |  |  |  |  |
| Shock resistance*5 | $147 \mathrm{~m} / \mathrm{s}^{2}$, Action time: 11 ms , 3 times by half-sine pulse in each direction $\mathrm{X}, \mathrm{Y}$, and Z |  |  |  |  |  |  |  |  |
| Noise durability | By noise simulator at noise voltage of 1000 Vp -p, noise width of 1 ms and period of 30 to 100 Hz |  |  |  |  |  |  |  |  |
| Grounding | Class D grounding (grounding resistance: $100 \Omega$ or less) <Common grounding with a heavy electrical system is not allowed.>*7 |  |  |  |  |  |  |  |  |
| Working atmosphere | Free from corrosive or flammable gas and excessive conductive dust |  |  |  |  |  |  |  |  |
| Operating altitude*8 | 0 to 2000 m |  |  |  |  |  |  |  |  |
| Installation location | Inside a control panel |  |  |  |  |  |  |  |  |
| Overvoltage category* ${ }^{*}$ | 11 or less |  |  |  |  |  |  |  |  |
| Pollution degree*10 | 2 or less |  |  |  |  |  |  |  |  |
| Equipment class | Class 2 |  |  |  |  |  |  |  |  |

*1: The simultaneous ON ratio of available PLC inputs or outputs changes with respect to the ambient temperature. For details, refer to manuals of each product.
*2: 0 to $55^{\circ} \mathrm{C}$ for products manufactured before June 2016. For intelligent function modules, refer to the manual of each product.
The following products cannot be used when the ambient temperature is less than $0^{\circ} \mathrm{C}$ :
FX5-40SSC-S, FX5-CNV-BUS, FX5-CNV-BUSC, battery (FX3U-32BL), SD memory cards (NZ1MEM-2GBSD, NZ1MEM-4GBSD, L1MEM-2GBSD and L1MEM-4GBSD),
FX3 extension modules, terminal modules and I/O cables (FX-16E-500CAB-S, FX-16E- $\square$ CAB and FX-16E- $\square \mathrm{CAB}-\mathrm{R}$ )
*3: The specifications are different in the use at less than $0^{\circ} \mathrm{C}$. For details, refer to the manual of each product
*4: When used in a low-temperature environment, use in an environment with no sudden temperature changes. If there are sudden temperature changes because of opening/closing of the control panel or other reasons, condensation may occur, which may cause a fire, fault, or malfunction. Furthermore, use an air conditioner in dehumidifier mode to prevent condensation.
*5: The criterion is shown in IEC61131-2
*6: When the system has equipment which specification values are lower than above mentioned vibration resistance specification values, the vibration resistance specification of the whole system is corresponding to the lower specification.

* 7: For grounding, refer to manuals of each product.
*8: The PLC cannot be used at a pressure higher than the atmospheric pressure to avoid damage.
*9: This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises. Category II applies to equipment for which electrical power is supplied from fixed facilities. The surge voltage withstand level for up to the rated voltage of 300 V is 2500 V .
* 10:This index indicates the degree to which conductive material is generated in the environment in which the equipment is used. Pollution level 2 is when only non-conductive pollution occurs. Temporary conductivity caused by condensation must be expected occasionally.

## Power supply specifications

- Power supply specifications (FX5U CPU module, AC power supply type)

[^20]
## General, power supply, input/output specifications

- Power supply specifications (FX5U CPU module, DC power supply type)

| Item | Specifications |
| :---: | :---: |
|  | FX5U-32M■/D■ |
| Rated voltage | 24 V DC |
| Allowable supply voltage range | 16.8 to 28.8 V DC |
| Allowable instantaneous power failure time | Operation can be continued upon occurrence of instantaneous power failure for 5 ms or less. |
| Power fuse | 250 V 3.15 A Time-lag Fuse |
| In-rush current | 50 A Max. 0.5 ms or less/24 V DC |
| Power consumption*1 | 30 W |
| 5 V DC internal power supply capacity*2*3 | $900 \mathrm{~mA}(775 \mathrm{~mA})$ |
| 24 V DC internal power supply capacity*2 | 480 mA ( 360 mA ) |

*1: The values show the state where power is consumed to the maximum level in case that the configuration has the max. no. of connections provided to CPU module.
*2: The values in the parentheses ( ) indicate the power supply capacity to be resulted when the power supply voltage falls in the range from 16.8 to 19.2 V DC.
*3: The values designate power supply capacity for an intelligent function module, expansion adapter, and expansion board.

- Power supply specifications (FX5UC CPU module)

| Item | Specifications |  |  |
| :---: | :---: | :---: | :---: |
|  | FX5UC-32MT/ $\square$ | FX5UC-64MT/ $\square$ | FX5UC-96MT/ $\square$ |
| Rated voltage | 24 V DC |  |  |
| Allowable supply voltage range | +20\%, -15\% |  |  |
| Allowable instantaneous power failure time | Operation can be continued upon occurrence of instantaneous power failure for 5 ms or less. |  |  |
| Power fuse | 125 V 3.15 A Time-lag Fuse |  |  |
| In-rush current | 35 A Max. 0.5 ms or less/24 V DC | $40 \mathrm{~A} \mathrm{Max}$.0.5 ms or less/24 V DC |  |
| Power consumption* | 5 W/24 V DC (30 W/24 V DC +20\%, -15\%) | 8 W/24 V DC (33 W/24 V DC +20\%, -15\%) | 11 W/24 V DC (36 W/24 V DC +20\%, -15\%) |
| 5 V DC internal power supply capacity | 720 mA |  |  |
| 24 V DC internal power supply capacity | 500 mA |  |  |

*: The value results when the CPU module is used alone.
The values in the parentheses () result when the maximum no. of connections have been made to the CPU module. (External DC 24 V power supplies of extension modules are not included.)

|  | Ambient temperature 0 to $55^{\circ} \mathrm{C}\left(32 \pm 131^{\circ} \mathrm{F}\right)$ | Within $\pm 1.0 \%$ ( $\pm 40$ digit*2) |
|  | Ambient temperature -20 to $0^{\circ} \mathrm{C}\left(32 \pm 131^{\circ} \mathrm{F}\right)^{* 1}$ | Within $\pm 1.5 \%$ ( $\pm 60$ digit*2) |
| Conversion speed |  | $30 \mu \mathrm{~s}$ (data refreshed every operation cycle) |
| Isolation |  | No isolation from the CPU module internal circuit |
| Number of occupied input/output points |  | 0 points (No concern with the maximum no. of input/output points of the CPU module) |
| Terminal block used |  | European-type terminal block |

*1: Products manufactured earlier than June 2016 do not support this specification.
*2: The term "digit" refers to "digital value".

## - Built-in RS-485 communication

| 1 lem | Speciications |
| :---: | :---: |
|  | FX5U / FX5UC CPU module |
| Transmission standards | Conforms to RS-485/RS-422 specifications |
| Data transmission speed | Max. 115.2 kbps |
| Communication method | Full-duplex (FDX) / Half-duplex (HDX) |
| Maximum transmission distance | 50 m |
| Protocol type | MELSOFT connection |
|  | MELSEC Communication protocol (3C/4C frames) |
|  | Non-protocol communication |
|  | MODBUS RTU communication |
|  | Inverter communication |
|  | N:N network |
|  | Predefined protocol support |
| Isolation of circuit | Not isolated |
| Terminal resistors | Buil-in (OPEN/110 $\Omega / 330$ ) |
| Terminal block used | European-type terminal block |

## General, power supply, input/output specifications

- Built-in Ethernet communication

| Item |  | Specifications |
| :---: | :---: | :---: |
|  |  | FX5U / FX5UC CPU module |
| Data transmission speed |  | 100/10 Mbps |
| Communication method |  | Full-duplex (FDX) / Half-duplex (HDX)*1 |
| Interface |  | RJ45 connector |
| Transmission method |  | Base band |
| Maximum segment length (The distance between hub and node) |  | 100 m |
| Cascade connection | 100BASE-TX | Cascade connection max. 2 stages*3 |
|  | 10BASE-T | Cascade connection max. 4 stages*3 |
| Protocol type |  | MELSOFT connection |
|  |  | SLMP (3E frame) |
|  |  | Socket communication |
|  |  | Predefined protocol support |
| Number of connections |  | Total of 8 for MELSOFT connection, SLMP, socket communication and predefined protocol support (Up to 8 external devices can access one CPU module at the same time.) |
| Hub*1 |  | Hubs with 100BASE-TX or 10BASE-T ports*4 are available. |
| IP address |  | Initial value: 192.168.3.250 |
| Isolation of circuit |  | Pulse transformer isolation |
| Cable used*2 | For 100BASE-TX connection | Ethernet standard-compatible cable, category 5 or higher (STP cable) |
|  | For 10BASE-T connection | Ethernet standard-compatible cable, category 3 or higher (STP cable) |

*1: IEEE802.3x flow control is not supported.
*2: Straight cables can be used. When connecting a CPU module with GOTs directly through Ethernet cables, crossover cables (category 5 e or less) can also be used.
*3: No. of connectable stages when using a repeater hub. For the no. of connectable stages when a switching hub is in use, check with the manufacturer of the switching hub.

* 4: The ports must comply with the IEEE802.3 100BASE-TX or IEEE802.3 10BASE-T standards.
- Built-in positioning function

| Item | $\quad$ Fpecifications |
| :--- | :--- |
|  | FX5U / FX5UC CPU module |
| Number of control axes | 4 axes* (Simple linear interpolation by 2-axis simultaneous start) |
| Maximum frequency | 2147483647 (200 kpps in pulses) |
| Positioning program | Sequence program, Table operation |
| Pulse output instruction | PLSY and DPLSY instructions |
| Positioning instruction | DSZR, DDSZR, DVIT, DDVIT, TBL, DRVTBL, DRVMUL, DABS, PLSV, DPLSV, DRVI, DDRVI, DRVA, <br> and DDRVA instructions |

*: The number of control axes is 2 when the pulse output mode is CW/CCW mode.

- Built-in high speed counter function

| Item | Specifications |  |
| :---: | :---: | :---: |
|  | FX5U / FX5 |  |
| Types of high-speed counters | Input specifications | Maximum freq |
|  | 1 phase, 1 input counter (S/W) | 200 kHz |
|  | 1 phase, 1 input counter (H/W) | 200 kHz |
|  | 1 phase, 2 input counter | 200 kHz |
|  | 2 phase, 2 input counter [1 edge count] | 200 kHz |
|  | 2 phase, 2 input counter [2 edge count] | 100 kHz |
|  | 2 phase, 2 input counter [ 4 edge count] | 50 kHz |
| Input allocation | Parameter setup* |  |
| High-speed counter instruction | [High-speed processing instruction] <br> - Setting 32-bit data comparison (DHSCS) <br> - Resetting 32-bit data comparison (DHSCR) <br> - Comparison of 32 -bit data band (DHSZ) <br> - Start/stop of the 16 -bit data high-speed I/O function (HIOEN) <br> - Start/stop of the 32-bit data high-speed I/O function (DHIOEN) <br> [High-speed transfer instruction of current value] <br> - High-speed current value transfer of 16-bit data (HCMOV) <br> - High-speed current value transfer of 32 -bit data (DHCMOV) |  |

[^21]
## Extension Device Specifications

I/O Modules

- Powered input/output modules

| Model | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Connection type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Input | Output |  |  |
| FX5-32ER/ES | 32 points | 16 points | 24 V DC (Sink/source) | 16 points | Relay | Terminal block |
| FX5-32ET/ES |  |  |  |  | Transistor (Sink) |  |
| FX5-32ET/ESS |  |  |  |  | Transistor (Source) |  |
| FX5-32ER/DS |  |  |  |  | Relay |  |
| FX5-32ET/DS |  |  |  |  | Transistor (Sink) |  |
| FX5-32ET/DSS |  |  |  |  | Transistor (Source) |  |

| FX5-8EYR/ES | 8 points | - | - | 8 points | Relay | Terminal block |
| FX5-8EYT/ES |  |  |  |  | Transistor (Sink) |  |
| FX5-8EYT/ESS |  |  |  |  | Transistor (Source) |  |
| FX5-16EYR/ES | 16 points |  |  | 16 points | Relay |  |
| FX5-16EYT/ES |  |  |  |  | Transistor (Sink) |  |
| FX5-16EYT/ESS |  |  |  |  | Transistor (Source) |  |
| FX5-C16EYT/D |  |  |  |  | Transistor (Sink) | Connector |
| FX5-C16EYT/DSS |  |  |  |  | Transistor (Source) |  |
| FX5-C32EYT/D | 32 points |  |  | 32 points | Transistor (Sink) |  |
| FX5-C32EYT/DSS |  |  |  |  | Transistor (Source) |  |

- I/O module

| Model | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Connection type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Input |  | Output |  |
| FX5-C32ET/D | 32 points | 16 points | 24 VDC (Sink) | 16 points | Transistor (Sink) | Connector |
| FX5-C32ET/DSS |  |  | 24 V DC (Sink/source) |  | Transistor (Source) |  |

- High-speed pulse input/output module

| Model | Total No. of points | No. of input/output points \& Input/output type |  |  |  | Connection type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Input |  | Output |  |
| FX5-16ET/ES-H* | 16 points | 8 points | 24 V DC (Sink/source) | 8 points | Transistor (Sink) | Terminal block |
| FX5-16ET/ESS-H* |  |  |  |  | Transistor (Source) |  |

*: Compatible with FX5U/FX5UC CPU modules from Ver. 1.030 (Serial number: $165 * * * *($ May 2016))

## Expansion adapter

- FX5-232ADP

| Item |  |
| :--- | :--- |
| Transmission standard/ <br> Maximum transmission distance/lsolation | Conforming to RS-232C/15 m/Photo-coupler isolation (Between communication line and CPU module) |
| External device connection method | 9-pin D-sub, male |
| Communication method | Half-duplex bidirectional/Full-duplex bidirectional |
| Baud rate | $300 / 600 / 1200 / 2400 / 4800 / 9600 / 19200 / 38400 / 57600 / 115200$ (bps)* |
| Compatible CPU module | FX5U, FX5UC |
| Number of occupied input/output points | O points (no points occupied) |
| Control power (supplied from CPU module) | $5 \mathrm{~V} \mathrm{DC}, 30 \mathrm{~mA} / 24 \mathrm{VDC}, 30 \mathrm{~mA}$ |

*: The communication method and baud rate vary depending on the type of communication.

- FX5-485ADP

| Item |  |
| :--- | :--- |
| Transmission standard/ <br> Maximum transmission distance/lsolation | Conforming to RS-485, RS-422/1200 m/Photo-coupler isolation (Between communication line and CPU module) |
| External device connection method | European-type terminal block |
| Communication method | Half-duplex bidirectional/Full-duplex bidirectional |
| Baud rate | $300 / 600 / 1200 / 2400 / 4800 / 9600 / 19200 / 38400 / 57600 / 115200(\mathrm{bps})^{*}$ |
| Terminal resistors | Built-in (OPEN/110 $\Omega / 330 \Omega$ ) |
| Compatible CPU module | FX5U, FX5UC |
| Number of occupied input/output points | O points (no points occupied) |
| Control power (supplied from CPU module) | $5 \mathrm{~V} \mathrm{DC}, 20 \mathrm{~mA} / 24 \mathrm{~V} \mathrm{DC,3} 30 \mathrm{~mA}$ |

[^22]- FX5-4AD-ADP

| Item | Specifications |  |  |  |  |

|  |  | 4 to 20 mA | 0 to 16000 | $1 \mu \mathrm{~A}$ |  |
| Accuracy (Accuracy in respect to full-scale analog output value) | Ambient temperature $25 \pm 5^{\circ} \mathrm{C}$ : within $\pm 0.1 \%$ (Voltage $\pm 20 \mathrm{mV}$, Current $\pm 20 \mu \mathrm{~A}$ ) Ambient temperature -20 to $55^{\circ} \mathrm{C}^{*}$ : within $\pm 0.2 \%$ (Voltage $\pm 40 \mathrm{mV}$, Current $\pm 40 \mu \mathrm{~A}$ ) |  |  |  |  |
| Isolation | Between output terminal and PLC: Photo-coupler isolation Between output channels: No isolation |  |  |  |  |
| Compatible CPU module | FX5U, FX5UC |  |  |  |  |
| Number of occupied input/output points | 0 points (no points occupied) |  |  |  |  |

*1: For details on the output conversion characteristic, refer to manuals of each product.
*2: The ambient temperature specification is 0 to $55^{\circ} \mathrm{C}$ for products manufactured earlier than June 2016.

## Expansion board

| Item | Specifications |  |  |
| :---: | :---: | :---: | :---: |
|  | FX5-232-BD | FX5-485-BD | FX5-422-BD-GOT |
| Transmission standards | Conforming to RS-232C | Conforming to RS-485, RS-422 | Conforming to RS-422 |
| Maximum transmission distance | 15 m | 50 m | According to the specification of the GOT |
| External device connection method | 9-pin D-sub, male | European-type terminal block | 8-pin MINI-DIN, female |
| Isolation | No isolation (Between communication line and CPU module) | No isolation (Between communication line and CPU module) | No isolation (Between communication line and CPU module) |
| Communication method | Half-duplex bidirectional/Full-duplex bidirectiona\|* | Half-duplex bidirectional/Full-duplex bidirectional | Half-duplex bidirectional |
| Baud rate | 300/600/1200/2400/4800/9600/19200/ 38400/57600/115200 (bps)* | $\begin{aligned} & \text { 300/600/1200/2400/4800/9600/19200/ } \\ & 38400 / 57600 / 115200 \text { (bps)* } \end{aligned}$ | 9600/19200/38400/57600/115200 (bps) |
| Terminal resistors | - | Built-in (OPEN/110 $\Omega / 330$ ) | - |
| Compatible CPU module | FX5U | FX5U | FX5U |
| Number of occupied input/output points | 0 points (no points occupied) | 0 points (no points occupied) | 0 points (no points occupied) |

[^23]
## Extension power supply module

FX5-1PSU-5V

| Item | Specifications |
| :---: | :---: |
| Rated supply voltage | 100 to 240 V AC |
| Allowable range of supply voltage | 85 to 264 V AC |
| Frequency rating | $50 / 60 \mathrm{~Hz}$ |
| Allowable instantaneous power failure time | Operation can be continued upon occurrence of instantaneous power failure for 10 ms or less. |
| Power fuse | $250 \mathrm{~V}, 3.15$ A time-lag fuse |
| In-rush current | 25 A Max. 5 ms or less/100 V AC 50 A Max. 5 ms or less/200 V AC |
| Power consumption | 20 W Max. |
| Output current* ${ }^{\text {* }}$ ( 24 V DC | 300 mA (Maximum output current depends on the ambient temperature.) |
| (For power supply to rear stage) 5 V DC | 1200 mA (Maximum output current depends on the ambient temperature.) |
| Compatible CPU module | FX5U (AC power supply type) |
| Number of occupied input/output points | 0 points (no points occupied) |

*: For details on the current conversion characteristic, refer to manuals of each product.

- FX5-C1PS-5V

| Item | Specifications |
| :---: | :---: |
| Supply voltage | 24 V DC |
| Voltage fluctuation range | +20\%, -15\% |
| Allowable time of momentary power failure | Operation can be continued upon occurrence of instantaneous power failure for 5 ms or less. |
| Power fuse | $125 \mathrm{~V}, 3.15$ A time-lag fuse |
| In-rush current | 35 A Max. 0.5 ms or less/24 V DC |
| Power consumption | 30 W Max. |
| Output current* 24 V DC | 625 mA (Maximum output current depends on the ambient temperature.) |
| (For power supply to rear stage) 5 V DC | 1200 mA (Maximum output current depends on the ambient temperature.) |
| Compatible CPU module | FX5U (DC power supply type) FX5UC |
| Number of occupied input/output points | 0 points (no points occupied) |

## $\diamond$ Bus conversion module

- FX5-CNV-BUS (FX5 (extension cable type) $\rightarrow$ FX3 extension)

| Item | Specifications |
| :--- | :--- |
| Compatible CPU module | FX5U, FX5UC |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Control power (supplied from PLC) | 5 V DC 150 mA |

- FX5-CNV-BUSC (FX5 (extension connector type) $\rightarrow$ FX3 extension)

| Item | Speciications |
| :--- | :--- |
| Compatible CPU module | FX5U, FX5UC |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Control power (supplied from PLC) | 5 V DC 150 mA |

## Connector conversion module

- FX5-CNV-IF (FX5 (extension cable type) $\rightarrow$

FX5 (extension connector type) extension)

| Item |  |
| :--- | :--- |
| Compatible CPU module | FX5U |
| Number of occupied input/output points | O points (no points occupied) |
| Control power (supplied from PLC) | 0 mA (no power consumed) |

- FX5-CNV-IFC (FX5 (extension connector type) $\rightarrow$ FX5 (extension cable type) extension)

| Item |  |
| :--- | :--- |
| Compatible CPU module | FX5UC |
| Number of occupied input/output points | 0 points (no points occupied) |
| Control power (supplied from PLC) | 0 mA (no power consumed) |

## Intelligent function module

- FX5-CCLIEF

| Item | Specifications |
| :---: | :---: |
| Station type | Intelligent device station |
| Station number | 1 to 120 (sets by parameter or program) |
| Communication speed | 1 Gbps |
| Network topology | Line topology, star topology (coexistence of line topology and star topology is also possible), and ring topology |
| Maximum station-to-station distance | Max. 100 m (Conforming to ANSI/TIA/EIA-568-B (Category 5e)) |
| Cascade connection | Max. 20 stages |
| Communication method | Token passing |
| RX | 384 points, 48 bytes |
|  | 384 points, 48 bytes |
| Maximum | 1024 points, 2048 bytes*2 |
| RWw | 1024 points, 2048 bytes*2 |
| Compatible CPU module | FX5U, FX5UC from Ver. 1.030 (Serial number: 165**** (May 2016)) |
| Number of occupied input/output points | 8 points (Either input or output is available for counting) |
| Control power (supplied from PLC) | 5 V DC 10 mA |
| Control power (supplied from outside) | 24 V DC 230 mA |

* 1: The maximum number of link points that a master station can assign to one FX5-CCLIEF module.
*2: 256 points ( 512 bytes) when the mode of the master station is online (High-Speed Mode).

## Simple motion module

FX5-40SSC-S
Control specification

| Item |  | Specifications |
| :---: | :---: | :---: |
| Number of control axes (Virtual servo amplifier axis included) |  | Max. 4 axes |
| Operation cycle (Operation cycle settings) |  | 1.777 ms |
| Interpolation function |  | Linear interpolation (Up to 4 axes) |
| Control system |  | PTP (Point To Point) control, Trajectory control (both linear and arc), Speed control, Speed-position switching control, Position-speed switching control, Speed-torque control |
| Acceleration/deceleration process |  | Trapezoidal acceleration/deceleration, S-curve acceleration/ deceleration |
| Compensation function |  | Backlash compensation, Electronic gear, Near pass function |
| Synchronous control |  | Synchronous encoder input, Cam, Phase compensation, Cam auto-generation |
| Control unit |  | mm, inch, degree, pulse |
| Number of positioning data |  | 600 data (positioning data No. 1 to 600)/axis (Can be set with MELSOFT GX Works3 or a sequence program.) |
| Backup |  | Parameters, positioning data, and block start data can be saved on flash ROM (battery-less backup) |
| Home position return | Home position return method | Proximity dog method, Count method 1, Count method 2, Data set method, Scale home position signal detection method |
|  | Fast home position return control | Provided |
|  | Auxiliary functions | Home position return retry, Home position shift |
| Positioning control | Linear control | Linear interpolation control (Up to 4 axes) ${ }^{* 1}$ (Vector speed, Reference axis speed) |
|  | Fixed-pitch feed control | Fixed-pitch feed control (Up to 4 axes) |
|  | 2-axis circular interpolation | Auxiliary point-specified circular interpolation, Central point-specified circular interpolation |
|  | Speed control | Speed control (Up to 4 axes) |
|  | Speed-position switching control | INC mode, ABS mode |
|  | Position-speed switching control | INC mode |
|  | Current value change | Positioning data, Start No. for a current value changing |
|  | NOP instruction | Provided |
|  | JUMP instruction | Unconditional JUMP, Conditional JUMP |
|  | LOOP, LEND | Provided |
|  | High-level positioning control | Block start, Condition start, Wait start, Simultaneous start, Repeated start |
| Manual control | JOG operation | Provided |
|  | Inching operation | Provided |
|  | Manual pulse generator | Possible to connect 1 module (Incremental), Unit magnification (1 to 10000 times) |

| Item |  | Specifications |
| :---: | :---: | :---: |
| Expansion control | Speed-torque control | Speed control without positioning loops, Torque control, Tightening \& press-fit control |
| Absolute position system |  | Made compatible by setting a battery to servo amplifier |
| Synchronous encoder interface |  | Up to 4 channels (Total of the internal interface, via PLC CPU interface, and servo amplifier interface) |
|  | Internal interface | 1 ch (Incremental) |
| Functions that limit control | Speed limit function | Speed limit value, JOG speed limit value |
|  | Torque limit function | Torque limit value same setting, torque limit value individual setting |
|  | Forced stop | Valid/Invalid setting |
|  | Software stroke limit function | Movable range check with current feed value, movable range check with machine feed value |
|  | Hardware stroke limit function | Provided |
| Functions that change control details | Speed change function | Provided |
|  | Override function | 1 to 300 [\%] |
|  | Acceleration/deceleration time change function | Provided |
|  | Torque change function | Provided |
|  | Target position change function | Target position address and speed are changeable |
| Other functions | M-code output function | WITH mode/AFTER mode |
|  | Step function | Deceleration unit step, Data No. unit step |
|  | Skip function | Via PLC CPU, Via external command signal |
|  | Teaching function | Provided |
| Parameter initialization function |  | Provided |
| External input signal setting function |  | Via CPU |
| Amplifier-less operation function |  | Provided |
| Mark detection function |  | Continuous Detection mode, Specified Number of Detections mode, Ring Buffer mode |
|  | Mark detection signal | Up to 4 points |
|  | Mark detection setting | 4 settings |
| Optional data monitor function |  | 4 points/axis |
| Driver communication function |  | Provided |
| SSCNET connect/disconnect function |  | Provided |
| Digital oscilloscope function*2 | Bit data | 16 ch |
|  | Word data | 16 ch |

*1: 4-axis linear interpolation control is enabled only at the reference axis speed. *2: 8 ch word data and 8 ch bit data can be displayed in real time.

Module specification

| Servo amplifier connection method |  | Speciications |
| :---: | :---: | :---: |
|  |  | SSCNETIIIH |
| Maximum overall cable distance [m] |  | 400 |
| Maximum distance between stations [m] |  | 100 |
| Perioheral //F |  | Via CPU module (Ethernet) |
| Manual pulse generator operation function |  | Possible to connect 1 module |
| Synchronous encoder operation function |  | Possible to connect 4 modules (Total of the internal interface, via PLC CPU interface, and servo ampilifer interface) |
| Input signals <br> (DI) | No. of input points | 4 points |
|  | Input method | Positive common/Negative common shared (Photocoupler isolation) |
|  | Rated input voltage/ current | 24 V DC/Approx. 5 mA |
|  | Operating voltage range | 19.2 to $26.4 \mathrm{~V} \mathrm{DC}(24 \mathrm{~V} \mathrm{DC}+10 \% /-20 \%$, inpple ratio $5 \%$ or less) |
|  | ON voltage/current | $17.5 \mathrm{~V} \mathrm{DC} \mathrm{or} \mathrm{more/3.5} \mathrm{~mA} \mathrm{or} \mathrm{more}$ |
|  | OFF voltage/current | 7 VDC or less/ $/ 1.0 \mathrm{~mA}$ or less |
|  | Input resistance | Approx. $6.8 \mathrm{k} \Omega$ |
|  | Response time | $1 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(OFF-ON}, \mathrm{ON-OFF)}$ |
|  | Recommended wire size | AWG24 ( 0.2 mm ) |
| Forced stop input signal (EM) | No. of input points | 1 point |
|  | Input method | Positive common/Negative common shared (Photocoupler isolation) |
|  | Rated input voltage/ current | 24 V DC/Approx. 5 mA |
|  | Operating voltage range | 19.2 to $26.4 \mathrm{~V} \mathrm{DC} \mathrm{(24} \mathrm{~V} \mathrm{DC}+10 \% /-20 \%$, inpple ratio $5 \%$ or less) |
|  | ON voltage/current | $17.5 \mathrm{~V} \mathrm{DC} \mathrm{or} \mathrm{more/3.5} \mathrm{~mA} \mathrm{or} \mathrm{more}$ |
|  | OFF voltage/current | 7 VDC or less/ 1.0 mA or less |
|  | Input resistance | Approx. $6.8 \mathrm{k} \Omega$ |
|  | Response time | $4 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(OFF-ON}, \mathrm{ON-OFF)}$ |
|  | Recommended wire size | AWG24 (0.2 mm) |

| liem |  |  | Specifications |
| :---: | :---: | :---: | :---: |
| Signal input form |  |  | Phase A/Phase B (magnification by 4/magnification by 2/magnification by 1), PULSE/SIGN |
|  | Differential output type (26LS31 or equivalent) | Input pulse frequency | Max. 1 Mpulse/s (After magnification by 4, up to 4 Mpulse/s) |
|  |  | Pulse width | $1 \mu \mathrm{~s}$ or more |
|  |  | Leading edge/ trailing edge time | 0.25 us or less |
|  |  | Phase difference | $0.25 \mu$ s or more |
|  |  | Rated input voltage | 5.5 V DC or less |
|  |  | High/Low-voltage | 2.0 to $5.25 \mathrm{VDC} / 0$ to 0.8 VDC |
|  |  | Differential voltage | $\pm 0.2 \mathrm{~V}$ |
|  |  | Cable length | Up to 30 m |
|  | Voltageoutput Opencollector type (5 V DC) | Input puse frequency | Max. 200 kpulse/s <br> (After magnification by 4 , up to 800 kpulse/s) |
|  |  | Pulse width | $5 \mu \mathrm{~s}$ or more |
|  |  | Leading edge/ trailing edge time | $1.2 \mu$ or less |
|  |  | Phase difference | $1.2 \mu \mathrm{~s}$ or more |
|  |  | Rated input voltage | 5.5 V DC or less |
|  |  | High/Low-voltage | 3.0 to 5.25 V DC/2 mA or less, 0 to $1.0 \mathrm{~V} \mathrm{DC/5} \mathrm{~mA} \mathrm{or} \mathrm{more}$ |
|  |  | Cable length | Up to 10 m |
| Compatible CPU module |  |  | FX5U, FX5UC |
| Number of occupied input/output points |  |  | 8 points (Either input or output is available for counting) |
| 24 V DC internal current consumption |  |  | 0.25 A |

| (7) | Other suffix symbols | -H | High-speed input/output function expansion |  |  |  |  |

## Input signal format

1) When a contactless sensor output is connected to PLC, PNP open collector transistor output can be handled via source input wiring, and NPN open collector transistor output via sink input wiring.
2) $S / S$ terminal and $0 V$ terminal are short-circuited by source input wiring. (Left side of the drawing below) S/S terminal and 24 V terminal are short-circuited by sink input wiring. (Right side of the drawing below)

## Output signal format

1) Relay output type is mechanically isolated by a relay, while transistor output type is isolated by a photocoupler. In addition, LED for output indication is driven by internal power supply.
2) Transistor output is made up of NPN open collector output (sink [-common]) system and NPN emitter follower output (source [+common]) system.

Terminal arrangement

$\rangle$ Expansion boards \& Expansion adapter

| Model | Specifications | Description page |
| :---: | :---: | :---: |
| FX5-232-BD | For RS-232C communication | 67 |
| FX5-485-BD | For RS-485 communication | 67 |
| FX5-422-BD-GOT | For GOT connection RS-422 communication | 67 |
| FX5-232ADP | For RS-232C communication | 70 |
| FX5-485ADP | For RS-485 communication | 70 |
| FX5-4AD-ADP | 4 ch analog input adapter | 42 |
| FX5-4DA-ADP | 4 ch analog output adapter | 42 |

FX5 extension power supply module, bus conversion module, connector conversion module

| Model |  | Specifications |
| :--- | :--- | :--- |
| FX5-1PSU-5V | FX5U extension power supply | 82 |
| FX5-C1PS-5V | FX5UC extension power supply | 83 |
| FX5-CNV-BUS | Bus conversion FX5 (extension cable type) $\rightarrow$ FX3 | 8 |
| FX5-CNV-BUSC | Bus conversion FX5 (extension connector type) $\rightarrow$ FX3 | 82 |
| FX5-CNV-IF | Connector conversion FX5 (extension cable type) $\rightarrow$ FX5 (extension connector type) | 82 |
| FX5-CNV-IFC | Connector conversion FX5 (extension connector type) $\rightarrow$ FX5 (extension cable type) | 83 |

## FX5 intelligent function module

| Model |  | Description page |
| :--- | :--- | :---: | :---: |
| FX5-40SSC-S | Simple motion 4-axis control | 57 |
| FX5-CCLIEF | Intelligent device station for CC-Link IE Field network | 62 |

## FX3 extension power supply module

| Model | Specifications | Description page |
| :---: | :---: | :---: |
| FX3U-1PSU-5V | FX3 extension power supply | 83 |

## $\diamond$ FX3 intelligent function module

| Model |  | Specifications |  |
| :--- | :--- | :--- | :--- |
| FX3U-4AD | 4 ch analog input |  |  |
| FX3U-4DA | 4 ch analog output | 43 |  |
| FX3U-4LC | 4 ch temperature control | 43 |  |
| FX3U-1PG | Positioning pulse output 200 kpps | 46 |  |
| FX3U-2HC | 2 ch 200 kHz high-speed counter |  |  |
| FX3U-16CCL-M | Master for CC-Link V2 | 56 |  |
| FX3U-64CCL | Interface for CC-Link V2 | 50 |  |
| FX3U-128ASL-M | Master for AnyWireALSINK | 63 |  |

## Software package

| Type |  | Model |  | Specifications |
| :--- | :--- | :--- | :--- | :--- |
| MELSOFT iQ Works (DVD-ROM) | SW2DND-IQWK-E*1 | FA engineering software (English)*2 |  |  |
| MELSOFT GX Works3 (DVD-ROM) | SW1DND-GXW3-E | PLC engineering software*2 (English) includes GX Works2, GX Developer) | 83 |  |

*1: Purchase the upgraded version separately if your software is the conventional model (SW1DND-IQWK-E). Contact our sales section.
*2: For the models corresponding to software, refer to manuals of each product.

## Communication cable

| Model |  | Specifications |  | Description page |
| :--- | :--- | :--- | :--- | :--- |
| FX-232CAB-1 | 3 m | 9 -pin D-sub (female) $\Leftrightarrow 9$ 9-pin D-sub (female) (for DOSN, etc.) | 75 |  |

Input/output cable

| Model |  | Specifications | Description page |
| :---: | :---: | :---: | :---: |
| FX-16E-150CAB | 1.5 m | For connection between terminal module and FX5 PLC (Flat cable with connectors at both ends) | 86 |
| FX-16E-300CAB | 3.0 m |  | 86 |
| FX-16E-500CAB | 5.0 m |  | 86 |
| FX-16E-500CAB-S | 5.0 m | Loose wire with connector on one end | 86 |
| FX-16E-150CAB-R | 1.5 m | For connection between terminal module and FX5 PLC (Multi-core round cable with connectors at both ends) | 86 |
| FX-16E-300CAB-R | 3.0 m |  | 86 |
| FX-16E-500CAB-R | 5.0 m |  | 86 |

## Input/output connector

| Model |  | Specifications | Description page |
| :--- | :--- | :--- | :---: |
| FX2C-/O-CON | 20-pin connector and 10 pressure connectors for flat cable | 86 |  |
| FX2C-/O-CON-S | 20-pin connector and 5 sets of housing for loose wire and crimp contact (for $\left.0.3 \mathrm{~mm}^{2}\right)$ | 86 |  |
| FX2C-/O-CON-SA | 20-pin connector and 5 sets of housing for loose wire and crimp contact (for $\left.0.5 \mathrm{~mm}^{2}\right)$ | 86 |  |
| FX-/O-CON2-S | 40-pin connector, 2 sets of loose wire, AWG22 $\left(0.3 \mathrm{~mm}^{2}\right)$ | 86 |  |
| FX-/O-CON2-SA | 40-pin connector, 2 sets of loose wire, AWG20 $\left(0.5 \mathrm{~mm}^{2}\right)$ | 86 |  |

## Terminal module

| Model | Specifications | Description page |
| :---: | :---: | :---: |
| FX-16E-TB | 16 input or output points | 85 |
| FX-32E-TB | 32 input or output points | 85 |
| FX-16E-TB/UL | 16 input or output points | 85 |
| FX-32E-TB/UL | 32 input or output points | 85 |
| FX-16EYR-TB | 16 relay output points $2 \mathrm{~A} / 1$ point (8 $\mathrm{A} / 4$ points) | 85 |
| FX-16EYS-TB | 16 triac output points, $0.3 \mathrm{~A} / 1$ point ( $0.8 \mathrm{~A} / 4$ points) | 85 |
| FX-16EYT-TB | 16 transistor output points, $0.5 \mathrm{~A} / 1$ point ( $0.8 \mathrm{~A} / 4$ points) (sink output) | 85 |
| FX-16EYR-ES-TB/UL | 16 relay output points $2 \mathrm{~A} / 1$ point (8 A/4 points) | 85 |
| FX-16EYS-ES-TB/UL | 16 triac output points, $0.3 \mathrm{~A} / 1$ point ( $0.8 \mathrm{~A} / 4$ points) | 85 |
| FX-16EYT-ES-TB/UL | 16 transistor output points, 0.5 A 11 point ( $0.8 \mathrm{~A} / 4$ points) (sink output) | 85 |
| FX-16EYT-ESS-TB/UL | 16 transistor output points, $0.5 \mathrm{~A} / 1$ point ( $0.8 \mathrm{~A} / 4$ points) (source output) | 85 |

## Power cable

| Model | Specifications | Description page |
| :--- | :--- | :--- | :---: |
| FX2NC-100MPCB | FX5UC CPU module, for 24 V DC power supply | 87 |
| FX2NC-100BPCB | Extension module (extension connector type), for 24 V DC input power supply | 87 |
| FX2NC-10BPCB1 | Extension module (extension connector type), for 24 V DC input power supply connection wiring | 87 |

Extended cable/connector conversion adapter

| Model |  | Specifications | Description page |
| :---: | :---: | :---: | :---: |
| FX5-30EC | 30 cm | For the extension of FX5 extension module | 84 |
| FX5-65EC | 65 cm |  | 84 |
| FX5-CNV-BC | For the connection between an extended extension cable and an FX5 input/output module (extension cable type), a high-speed pulse input/ output module, or an FX5 intelligent function module |  | 84 |

## SD memory card \& battery

| Model |  | Description page |
| :--- | :--- | :---: | :---: |
| NZ1MEM-2GBSD | SD memory card (2 GB) | 81 |
| NZ1MEM-4GBSD | SDHC memory card (4GB) | 8 |
| FX3U-32BL | Battery | 81 |

## About this product catalog

Due to the constantly growing product range and new or changed product features, the information in this catalog may be updated without notice. Please contact your Mitsubishi Electric product provider for more details.
Texts, figures and diagrams shown in this product catalog are intended exclusively for explanation and assistance in planning and ordering the FX5 programmable logic controllers (PLCs) and the associated accessories. Only the manuals supplied with the modules are relevant for installation, commissioning and handling of the modules and the accessories. The information given in the manuals must be read before installation
and commissioning of the modules or software. If any questions arise regarding the application or use of the PLC modules and accessories described in this catalog, please contact your Mitsubishi Electric product provider.

This catalog confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this catalog.

## YOUR SOLUTION PARTNER

Mitsubishi Electric offers a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines.

## A NAME TO TRUST

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation is active in space development, transportation, semi-conductors, energy systems, communications and information processing, audio visual equipment and home electronics, building and energy management and automation systems, and has 237 factories and laboratories worldwide in over 121 countries.

This is why you can rely on Mitsubishi Electric automation solution - because we know first hand about the need for reliable, efficient, easy-to-use automation and control in our own factories.

As one of the world's leading companies with a global turnover of over 4 trillion Yen (over $\$ 40$ billion), employing over 100,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

Medium voltage: VCB, VCC

Power monitoring, energy management

Compact and Modular Controllers

Inverters, Servos and Motors

Numerical Control (NC)

Robots: SCARA, Articulated arm

Processing machines: EDM, Lasers, IDS

## PROGRAMMABLE CONTROLLERS <br> MELSEC iQ-F Series

[^0]:    *1: Can be changed with parameters within the capacity range of the CPU built-in memory.

[^1]:    *: Excluding some models

[^2]:    *: Compatible with FX5U CPU modules from Ver. 1.030 (Serial number: $165 * * * *$ (May 2016))

[^3]:    *: Derating occurs when the ambient temperature exceeds $40^{\circ} \mathrm{C}$. For details, refer to manuals of each product.

[^4]:    Refer to the next section for the details of some products since the number of connected modules may be limited.

[^5]:    * Refer to the manual for details on each model.

[^6]:    *: Connection with FX5U requires FX5-CNV-IF.

[^7]:    *: Connection with FX5U requires FX5-CNV-IF.

[^8]:    *: Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC.

[^9]:    *: Differs depending on the sensor input range.

[^10]:    *: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

[^11]:    * : Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC.

[^12]:    ＊：Connection with FX5U or FX5UC requires FX5－CNV－BUS or FX5－CNV－BUSC．

[^13]:    *1: Replaceable with 1-speed positioning (relative positioning) instruction. *2: With DOG search function
    *3: With Count method/Data set method function

    * 4: With Count method/Scale home position signal detection method/Data set method function
    *5: Replaceable with 1 -speed positioning table operation
    *6: Replaceable with variable speed operation or interrupt 1-speed positioning operation
    *7: Simple linear interpolation only

[^14]:    *1: Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC.
    *2: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

[^15]:    *: Connection with FX5U or FX5UC requires FX5-CNV-BUS or FX5-CNV-BUSC

[^16]:    *: Connection with FX5UC requires FX5-CNV-IFC or FX5-C1PS-5V.

[^17]:    *: RX/RY for a high-order word of the last station of "Remote I/O" points is occupied as a system area

[^18]:    *: Function expansion board cannot be connected to FX3UC-प[MT/D and FX3UC-ם■MT/DSS. Specific adapter can be directly connected.

[^19]:    *1: Can be changed with parameters within the capacity range of the CPU built-in memory.

[^20]:    *1: The values show the state where the service power of 24 V DC is consumed to the maximum level in case that its configuration has the max. no. of connections provided to CPU module. (Including the current in an input circuit)
    *2: When I/O modules are connected, they consume current from the 24 V DC service power supply, resulting in decrease of usable current. For details about the service power supply, refer to the manual.
    *3: The values designate power supply capacity for an intelligent function module, expansion adapter, and expansion board.
    *4: The values in the parentheses () will result when the ambient temperature is less than $0^{\circ} \mathrm{C}$ during operations.

[^21]:    *: For details, refer to manuals of each product

[^22]:    *: The communication method and baud rate vary depending on the type of communication.

[^23]:    *: The communication method and baud rate vary depending on the type of communication

[^24]:    * Not all products are available in all countries.
