Engineering Change Notice

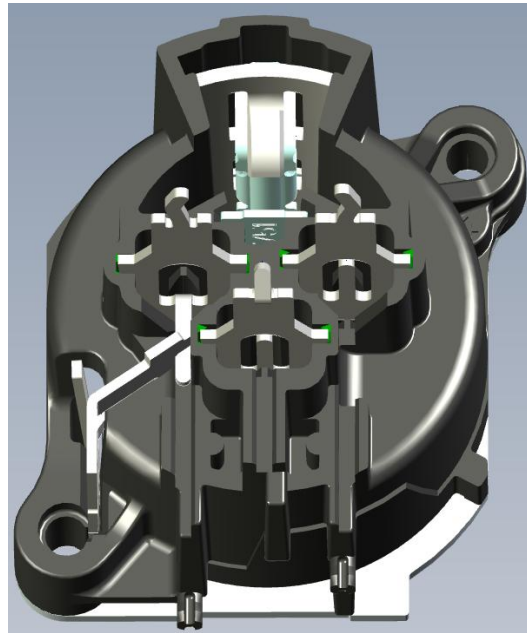

As part of continuous improvement, we have invested in a new injection molding tool. During the manufacturing process with the old injection molding tool, additional ribs were present on the rear side of the chassis. These ribs had no function in the end product, but were necessary for the molding process with the old tool. With the new tool, these ribs are no longer needed and have been removed.

Impact on Product:

- The removed ribs had no functional relevance for the end product.
- Mechanical, electrical, and dimensional specifications remain unchanged.
- No impact on product performance, quality, or reliability.
