

Endress+Hauser Power feed-in RNF22-AAA

Power and error message module 24 V DC with relay output for DIN rail mounting in control cabinets.

Picture for reference only. Product appearance may vary based on configuration

The RNF22 is a power feed-in and error message module that safely powers and monitors system interfaces on the DIN rail bus. It offers a redundant 24 VDC supply voltage. Intelligent error diagnostics alert of power supply failure, NAMUR group error messages or fuse error via a relay contact and a flashing LED. The compact interface module is protected against overvoltage and reverse polarity via diode decoupling.

- Safely power and monitor system interfaces on the DIN rail bus
- Intelligent diagnostics built-in
- Protected against overvoltage and reverse polarity
- Quick and easy wiring

Configuration of RNF22-AAA:

Approval:	AA	Non-hazardous area
Electrical Connection:	A	Screw terminals

Alternative part number: RNF22-1014/0
