

# Quick start guide for MERUS™ evaluation boards

## EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

### About this document

#### Scope and purpose

This document provides step-by-step instructions on how to get the EVAL\_AUDIO\_MA2304xNS\_B evaluation board to play audio quickly.

#### Intended audience

Design engineers, technicians, and developers of electronic systems.

#### Evaluation board

This board is to be used during the design-in process for evaluating and measuring characteristic curves, and for checking datasheet specifications.

**Figure 1** Overview of the EVAL\_AUDIO\_MA230xxNS\_B evaluation board

## Important notice

**“Evaluation Boards and Reference Boards” shall mean products embedded on a printed circuit board (PCB) for demonstration and/or evaluation purposes, which include, without limitation, demonstration, reference and evaluation boards, kits and design (collectively referred to as “Reference Board”).**

**Environmental conditions have been considered in the design of the Evaluation Boards and Reference Boards provided by Infineon Technologies. The design of the Evaluation Boards and Reference Boards has been tested by Infineon Technologies only as described in this document. The design is not qualified in terms of safety requirements, manufacturing and operation over the entire operating temperature range or lifetime.**

**The Evaluation Boards and Reference Boards provided by Infineon Technologies are subject to functional testing only under typical load conditions. Evaluation Boards and Reference Boards are not subject to the same procedures as regular products regarding returned material analysis (RMA), process change notification (PCN) and product discontinuation (PD).**

**Evaluation Boards and Reference Boards are not commercialized products, and are solely intended for evaluation and testing purposes. In particular, they shall not be used for reliability testing or production. The Evaluation Boards and Reference Boards may therefore not comply with CE or similar standards (including but not limited to the EMC Directive 2004/EC/108 and the EMC Act) and may not fulfill other requirements of the country in which they are operated by the customer. The customer shall ensure that all Evaluation Boards and Reference Boards will be handled in a way which is compliant with the relevant requirements and standards of the country in which they are operated.**

**The Evaluation Boards and Reference Boards as well as the information provided in this document are addressed only to qualified and skilled technical staff, for laboratory usage, and shall be used and managed according to the terms and conditions set forth in this document and in other related documentation supplied with the respective Evaluation Board or Reference Board.**

**It is the responsibility of the customer’s technical departments to evaluate the suitability of the Evaluation Boards and Reference Boards for the intended application, and to evaluate the completeness and correctness of the information provided in this document with respect to such application.**

**The customer is obliged to ensure that the use of the Evaluation Boards and Reference Boards does not cause any harm to persons or third party property.**

**The Evaluation Boards and Reference Boards and any information in this document is provided "as is" and Infineon Technologies disclaims any warranties, express or implied, including but not limited to warranties of non-infringement of third party rights and implied warranties of fitness for any purpose, or for merchantability.**

**Infineon Technologies shall not be responsible for any damages resulting from the use of the Evaluation Boards and Reference Boards and/or from any information provided in this document. The customer is obliged to defend, indemnify and hold Infineon Technologies harmless from and against any claims or damages arising out of or resulting from any use thereof.**

**Infineon Technologies reserves the right to modify this document and/or any information provided herein at any time without further notice.**

### Safety precautions

## Safety precautions

*Note:* Please note the following warnings regarding the hazards associated with development systems.

**Table 1** Safety precautions

	<b>Caution:</b> The device surfaces of the evaluation or reference board may become hot during testing. Hence, necessary precautions are required while handling the board. Failure to comply may cause injury.
	<b>Caution:</b> The evaluation or reference board contains parts and assemblies sensitive to electrostatic discharge (ESD). Electrostatic control precautions are required when installing, testing, servicing or repairing the assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with electrostatic control procedures, refer to the applicable ESD protection handbooks and guidelines.

## 1 Board overview

The demonstration board EVAL\_AUDIO\_MA2304xNS\_B is an evaluation and demonstration board for MERUS™ audio's [MA2304DNS](#) and [MA2304PNS](#) amplifiers.

It contains digital input/output (I/O) and various output and setup/selection features. It also contains one onboard buck power supply generator (1.8 V/3.3 V selectable) so only one external power supply (PVDD) is necessary.

The board can be used for evaluating or demonstrating key features and advantages of the MERUS™ technology:

- Energy efficiency
  - Power losses at typical audio listening levels
  - Idle power loss
- Adaptive power management system
- No output filter components
  - Solution cost and size reduction
- Audio performance
  - THD performance and audio quality

### 1.1 Board features and audio performance

- |                                   |   |
|-----------------------------------|---|
| • Number of audio channels        | 2 (BTL) or 1 (PBTL)   |
| • Audio input format              | Digital (I <sup>2</sup> S, LJF, RJF or TDM)                 |
| • Typical supply voltage          | 18 V (PVDD)   |
| • Output noise level              | 52 $\mu\text{V}_{\text{RMS}}$ (high audio performance mode) |
| • Dynamic range                   | 106 dB (high audio performance mode)                        |
| • Idle consumption at PVDD = 18 V | 61 mW (low power consumption mode)                          |
| • Efficiency                      |   |
| – 1 W, 8 $\Omega$                 | More than 79 percent  |
| – Full-scale, 8 $\Omega$          | More than 90 percent  |

**Note:** *Idle consumption is the sum of the output stage (PVDD) current, VDD, and VDD\_IO supply current. As all the supplies are tied to PVDD, the buck converters's efficiency should be considered when measuring idle current consumption directly from PVDD. Features on the EVK make it possible to break the input and output of the buck converters for these purposes. Please refer to the MA2304xNS device datasheet for the exact current figures.*

## Board overview

**Table 2** Typical audio and electrical specifications

Parameter	Description	Conditions	Typical	Unit
$P_{I\text{POUT,BTL}}$	Instantaneous peak output power per channel (BTL)	THD + N = 1%, $R_L = 4\ \Omega$ , $f = 1\ \text{kHz}$	60	W
$P_{R\text{MSOUT,BTL}}$	RMS output power per channel (BTL)	THD + N = 10%, $R_L = 4\ \Omega$ , $f = 1\ \text{kHz}$	37	W
THD+N	THD + noise (N)	1 kHz, $P_{\text{OUT}} = 5\ \text{W}$ , $R_L = 4\ \Omega$	0.05	%
$\eta$	Efficiency <sup>2</sup>	$P_{\text{OUT}} = 2 \times \text{full-scale}$ , $4\ \Omega$	84	%
		$P_{\text{OUT}} = 2 \times \text{full-scale}$ , $8\ \Omega$	90	%

<sup>2</sup>Efficiency values do not consider the on-board buck converter power consumption.

## 1.2 Board operating conditions

**Table 3** Recommended operating conditions

Parameter	Minimum	Nominal	Maximum	Unit
$P_{\text{VDD}}$	10	18	20	V
$V_{\text{DD}}$	1.62	1.8	3.65	V
Maximum output current per channel (BTL)			6.0	A
Maximum output current (PBTL)			12.0	A

For in-depth information on the evaluation board itself, please refer to the [EVAL\\_AUDIO\\_MA2304DNS\\_B](#) or [EVAL\\_AUDIO\\_MA2304PNS\\_B](#) hardware user manual.

# Quick start guide for MERUS™ evaluation boards

## EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

### Quick start

## 2 Quick start

This chapter describes how to configure, power, and start up the board for quick evaluation.

### 2.1 What's included

The evaluation kit box comes with:

- EVAL\_AUDIO\_MA2304xNS board
- Three interface boards (analog in, S/PDIF coax, and S/PDIF optical)
- Micro USB cable
- 22  $\mu$ H power inductor for performance measurements (refer to the hardware user manual for details)

The following items are required, in addition to the items in the evaluation kit, for basic UI and DSP evaluation:

- DC power supply: 10 to 20 V DC/6 A for BTL mode or 10 to 20 V DC/12 A for PBTL mode
- Loudspeaker(s): 2 to 8  $\Omega$  speaker impedance
- (Optional): 2 to 8  $\Omega$  power resistor, class D filter and audio analyzer

### 2.2 Hardware setup

First, verify that the board jumpers are in the default position, as shown in [Figure 2](#).

**Figure 2** Default jumper settings for EVAL\_AUDIO\_MA230xxNS\_B

## Quick start guide for MERUS™ evaluation boards

### EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

#### Quick start

For quick and easy evaluation, plug one of the interface boards into the J1 I/O header on top of the MA2304xNS board, as shown in [Figure 3](#).

**Figure 3** Interface boards and MA2304xNS evaluation board

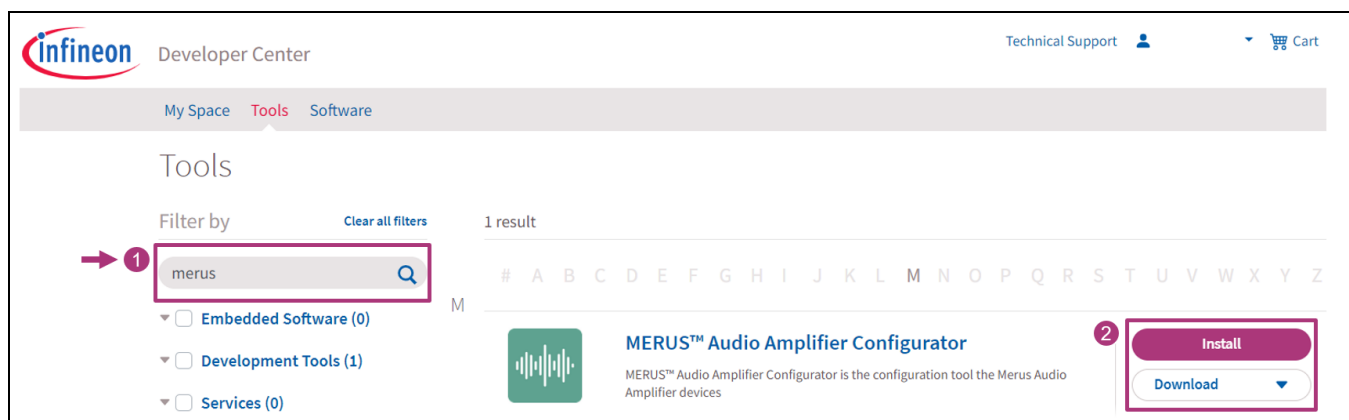

An MA2304xNS evaluation setup with an interface board can play audio without software, as the interface board's digital audio output format matches the MA2304xNS device default.

The MA2304xNS board's jumper and switch settings are preconfigured for basic BTL operation as default before shipping.

### 2.3 Software installation

The MERUS™ audio amplifier configurator can be downloaded by visiting <https://softwaretools.infineon.com/> and registering the board. Once registered, the software can be installed through the Infineon developer center launcher or downloaded as a separate installer file. This will also install all the necessary device drivers to communicate with the MA2304xNS evaluation board.

To install, search for “merus” under the Tools tab of the Infineon developer center website or launcher:

**Figure 4** How to find the MERUS™ audio amplifier configurator

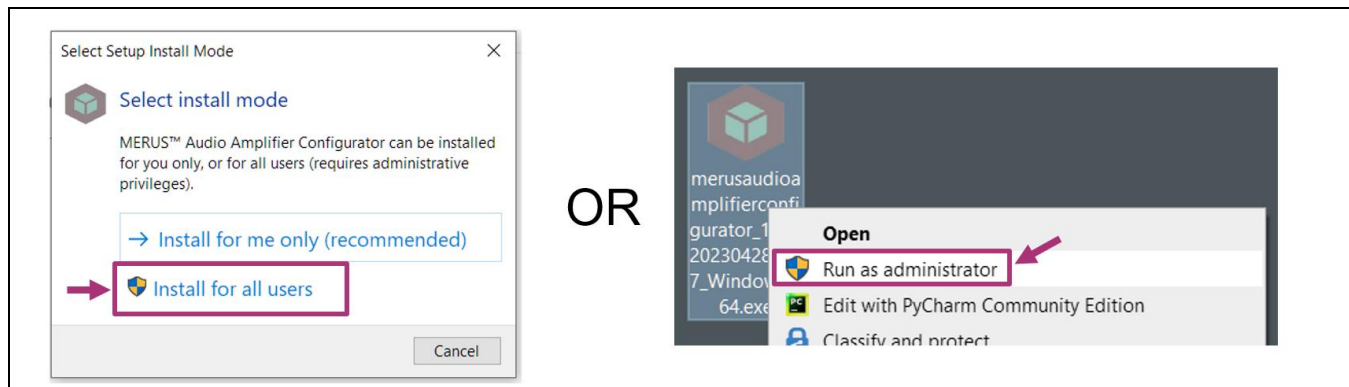

For proper operation, the software must be installed using administrative privileges, as shown in [Figure 5](#).

# Quick start guide for MERUS™ evaluation boards

## EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

### Quick start

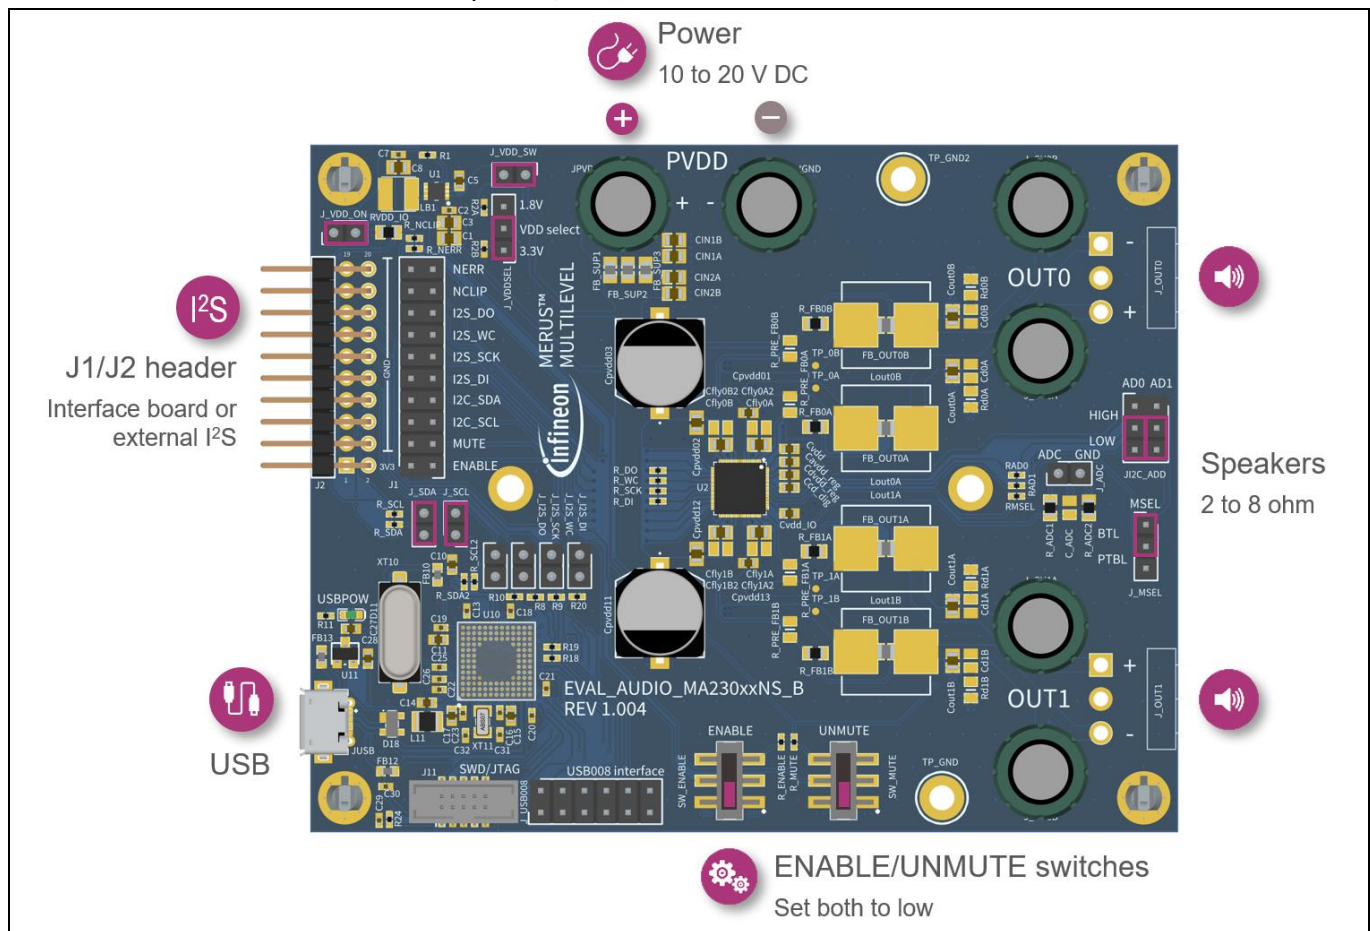

**Figure 5** How to install the software using administrative privileges

This concludes the software installation.

## 2.4 Power and start-up procedure

The following steps describe the power-up procedure and device configuration using the GUI software tool.

1. First, connect all the sources and speaker/load cables as follows:

**Figure 6** Default EVK configuration for audio playback

2. Prior to launching the software:
  - a. Power up the **P<sub>VDD</sub>** DC power supply. 18 V is recommended for typical evaluation.

## Quick start guide for MERUS™ evaluation boards

### EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

#### Quick start

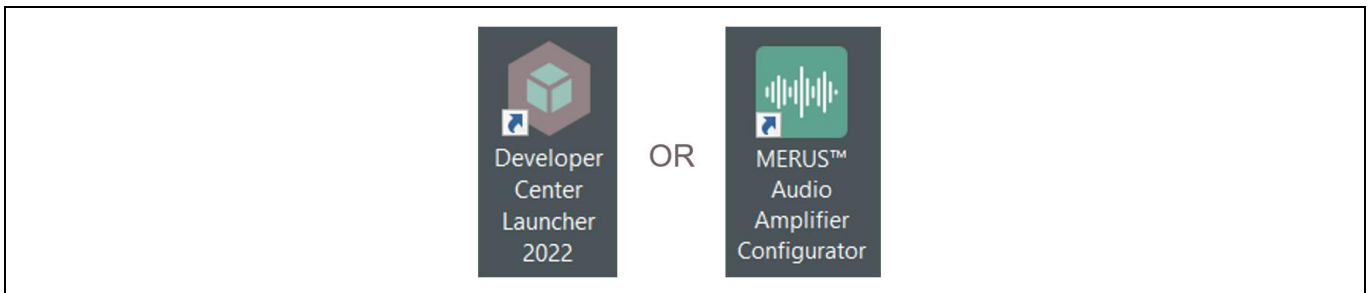

- b. Make sure the **Micro USB** cable from the computer is connected to the EVK board.
- c. Mute and connect an external audio source to the **interface board** input (analog, S/PDIF coax, or optical).
- d. Set the **SW\_ENABLE** switch to **ON** and **SW\_MUTE** to **UNMUTE**, as shown in [Figure 7](#).

**Figure 7** SW\_ENABLE set to ENABLE; SW\_MUTE set to UNMUTE

At this point, the MA2304xNS should be able to play audio. Set the audio source to a low volume and unmute it.

3. Once the hardware is configured, double-click the “Developer center launcher” or the “MERUS audio amplifier configurator” icon on your desktop to launch the application.

**Figure 8** MERUS™ audio amplifier configurator

After a few seconds, the following screen should appear:

**Figure 9** MERUS™ audio amplifier configurator

4. At this point, feel free to adjust the volume level or put the device on standby.

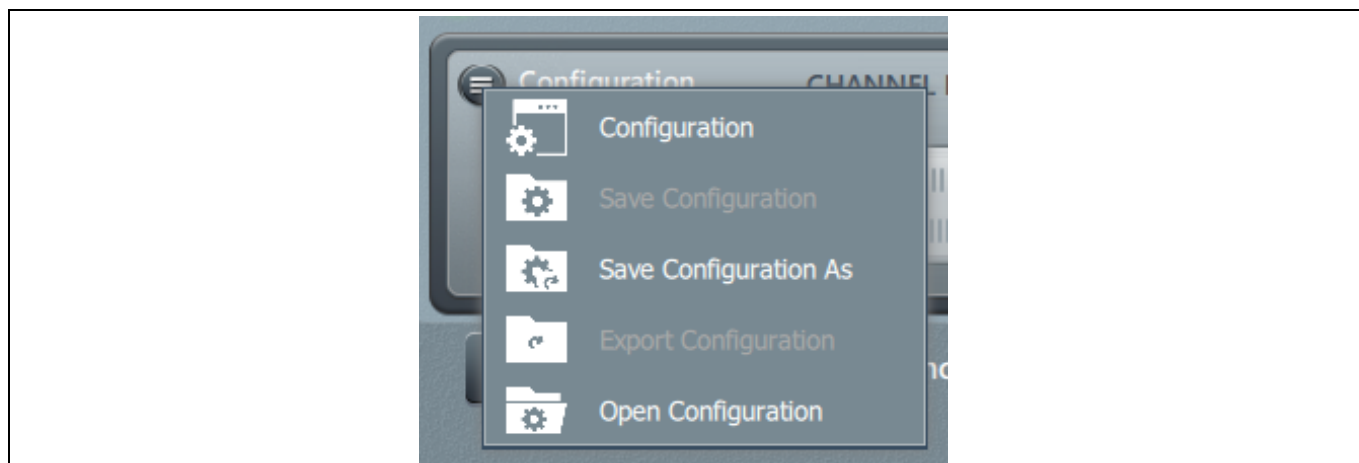

The **Connected** indicator means that the software can communicate with the MA2304xNS device.

5. To access advanced device features and DSP flows, click the **Configuration** button and select the **Configuration** option.

# Quick start guide for MERUS™ evaluation boards

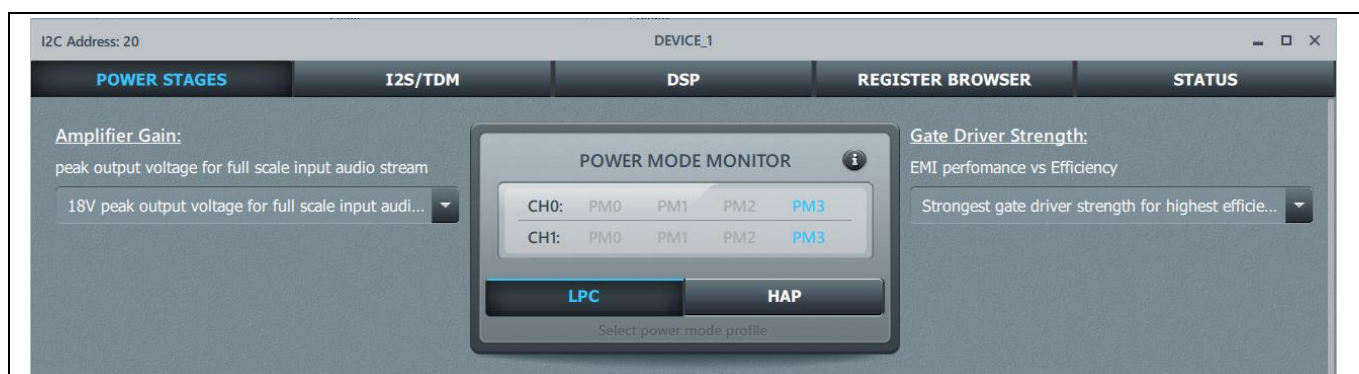

EVAL\_AUDIO\_MA2304DNS\_B and EVAL\_AUDIO\_MA2304PNS\_B

## Quick start

**Figure 10** Configuration dropdown menu

The Configuration page should now appear. This page provides access to advanced device features, DSP flows, device registers, and status indicators.

**Figure 11** Configuration page

Please refer to the evaluation board user manual for details on how to perform audio performance measurements as well as board schematics, layout views, and bill of materials (BOM).
