AUTOMATIC CAPTURE OF 100 SCREENS

Replay	The instrument ALWAYS memorizes last 100 screens (no user interaction or setup required). When an anomaly occurs on screen, the HOLD button can be pressed to review the full screen sequence over and over. Instrument can be set up for triggering on glitches or intermittent anomalies and will operate in "baby-sit" mode and will capture 100 events. Manual or continuous replay. Displays the captured 100 screens as a "live" animation. Each screen is labelled with date- and timestamp. The contents can also be viewed by manually scrolling backwards and forwards "screen by screen".
Replay storage	Up to 2 sets of 100 screens each can be saved for later recall and analysis.

WAVEFORM COMPARE AND PASS/FAIL TESTING

Waveform compare	Provides storage and display of a reference waveform for visual comparison with newly acquired waveforms. Reference is derived from an acquired waveform and can be modified in the ScopeMeter or externally using FlukeView Software.
Pass/Fail Testing (199C, 196C)	In waveform compare mode, the Color Scopemeter can be set up to store only matching ("Pass") or only non-matching ("Fail") acquired waveforms in the replay memory bank for further analysis.
