

Switchcraft®

110Ω to 75Ω and 75Ω to 110Ω
Impedance Matching Transformers

Features:

- 110Ω to 75Ω and 75Ω to 110Ω impedance matching
- Enable long distance runs of AES/EBU digital audio over standard coaxial cable
- Allow easy connection of AES/EBU digital audio signals to HD patchbays.
- Solid metal housing

366 and 367 Impedance Matching Transformers

366 and **367** impedance matching transformers from Switchcraft® are used to convert 110 Ohm AES/EBU digital audio signals to 75 Ohm signals and 75 Ohm signals to 110 Ohm. This allows for long distance transmission of AES/EBU digital audio over standard 75 Ohm coaxial lines. The adapters can also be used to connect AES/EBU digital audio signals to high-definition, broadcast quality video patchbays for secure and lossless patching.

Built by hand in Chicago, USA
