Pin Description

Power Supply

Pin Number	Symbol	Type	Function
6	VDD	P	Power Supply for Operation This is a voltage supply pin. It must be connected to external source.
5	VDDR		Power Supply for Core Logic Circuit This is a voltage supply pin. It can be supplied externally or regulated internally from VDD. A capacitor should be connected between this pin & VSS under all circumstances.
8	VDDIO		Power Supply for I/O Pin This pin is a power supply pin of I/O buffer. It should be connected to VDD or external source. All I/O signal should have VIH reference to VDDIO. When I/O signals pins (C80, PS, D0~D7, control signals...) pull high, they should be connected to VDDIO.
27	VSS		Ground of Logic Circuit A reference for the logic pins. It must be connected to external ground.
4,31	VCC_C		Power Supply for OEL Panel This is the most positive voltage supply pin of the chip. It must be connected to external source.
2.33	VSSH		Ground of OEL Panel This is the ground pins for analog circuits. It must be connected to external ground.

Driver

Pin Number	Symbol	Type	Function
30 29 28	RPRE GPRE BPRE	I/O	External Voltage Reference for Pre-charge Signal This is the precharge driving voltages for OEL driving segment pins respectively. A zener diode should be connected between this pin and VSS.
26	IREF		Current Reference for Brightness Adjustment This is the current reference pin to generate recharge and driving current. A 39k Ω resistor should be connected between this pin and VSS.
3,32	VCC_R	P	Voltage Output High Level for Scan Signal This is the scan driver power supply pin. A tantalum capacitor should be connected between this pin and VSS.

Clock

Pin Number	Symbol	Type	Function
24 25	OSC1 OSC2	I O	Fine Adjustment for Oscillation The frequency is controlled by external 27k Ω resistor between OSC1 and OSC2. The oscillator signal is used for system clock generation. When the external clock mode is selected, OSC1 is used external clock input.

Configuration

Pin Number	Symbol	Type	Function
7	PSEL	I	Regulator Enable/Disable for Logic Power Supply This pin is the regulator enable/disable input of VDDR. If it is connected to VDD, the internal regulator is used. Otherwise, an external voltage supplier should be used.
