

BASE

Zinc-plated steel.

STEM

The resistance of the levelling element to a static load is obviously limited by the load capacity of the stem (steel class 5.8).

ELASTIC RING

Steel for springs.

STANDARD EXECUTIONS

- **GN 6311.4-N**: base without coating.
- **GN 6311.4-R**: base with thermoplastic elastomer (TPE) no-slip coating.
- **GN 6311.4-G**: base with acetal based (POM) technopolymer coating, white colour.

FEATURES

The resistance of the levelling foot to a static load is only limited by the load capacity of the stem (steel class 5.8).

The static load values in the table below refer to the resistance to a load applied on the axis of the levelling element.

Under common working conditions, side or angular loading increases the stress on the levelling element and reduces its load capacity.
