

Is Now Part of

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FAN6292BMX/FAN6292MX

Compact Secondary-Side Synchronous Rectifier Control with USB Type-C Control

FAN6292BMX/FAN6292MX are highly integrated, secondary-side power adaptor controllers compatible with Type-C control. Internally adopted synchronous rectifier control helps for less BOM counts as well as easy design.

FAN6292BMX/FAN6292MX are also a source only USB Type-C controllers which are optimized for mobile chargers and power adapters. It supports standard 3 A VBUS current level. N-Channel MOSFET is compatible as a load switch, and helps to reduce BOM cost.

FAN6292BMX/FAN6292MX incorporate adaptive output under-voltage protection to improve system reliability.

Features

- Type-C Control for Standard 3 A VBUS Current
- N-Channel MOSFET Control as a Type-C Load Switch
- Internal Synchronous Rectifier Control Circuit
- Protections for Safe Operation; Output Under-Voltage-Protection

Typical Applications

- Battery Chargers for Smart Phones, Feature Phones, and Tablet PCs
- AC-DC Adapters for Portable Devices that Require CV/CC Control

FAN6292BMX/FAN6292MX

PIN FUNCTION DESCRIPTION

Pin No.	Pin Name	Description
1	CC2	Configuration Channel 2. This pin is used to detect connections of Type-C cables and connectors. It is tied to the USB Type-C CC2.
2	BLD / AUX	Bleeder and AUX function. Discharging path of output capacitor when UFP detachment is acknowledged. In addition, information is delivered to primary to enhance output performance.
3	LGATE	Load Switch Gate. This pin is tied to the gate of the load switch
4	VIN	Input Voltage. This pin is tied to the output of the adaptor to monitor its output voltage and supply internal bias. IC operating current, and MOSFET gate drive current are supplied through this pin.
5	GATE	Gate Drive Output. Totem-pole output to drive the external SR MOSFET.
6	LPC	SR MOSFET Drain Voltage Detection. This pin is used to detect the voltage on the secondary winding during the on time period of the primary MOSFET.
7	GND	Ground.
8	CC1	Configuration Channel 1. This pin is used to detect connections of Type-C cables and connectors. It is tied to the USB Type-C CC1.

FAN6292BMX/FAN6292MX

MAXIMUM RATINGS (Note 1,2,3)

Rating	Symbol	Value	Unit
VIN Pin Input Voltage	V_{IN}	20	V
BLD/AUX Pin Input Voltage	$V_{BLD/AUX}$	20	V
LGATE Pin Input Voltage	V_{LGATE}	20	V
CC1 Pin Input Voltage	V_{CC1}	-0.3 to 6.0	V
CC2 Pin Input Voltage	V_{CC2}	-0.3 to 6.0	V
LPC pin input voltage	V_{LPC}	-0.3 to 6.5	V
GATE pin input voltage	V_{GATE}	-0.3 to 6.0	V
Power Dissipation ($T_A=25^\circ\text{C}$)	P_D	850	mW
Operating Junction Temperature	T_J	-40 to 150	$^\circ\text{C}$
Storage Temperature Range	T_{STG}	-40 to 150	$^\circ\text{C}$
Lead Temperature, (Soldering, 10 Seconds)	T_L	260	$^\circ\text{C}$
Human Body Model, ANSI/ESDA/JEDEC JS-001-2012 (Note 4)	ESD_{HBM}	4	kV
Charged Device Model, JESD22-C101 (Note 4)	ESD_{CDM}	1.75	kV

1. Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
2. All voltage values, except differential voltages, are given with respect to the GND pin.
3. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.
4. Meets JEDEC standards JS-001-2012 and JESD 22-C101.

THERMAL CHARACTERISTICS (Note 5)

Rating	Symbol	Value	Unit
Thermal Characteristics, Thermal Resistance, Junction-to-Air Thermal Reference, Junction-to-Top	$R_{\theta JA}$ $R_{\theta JT}$	153 22	$^\circ\text{C/W}$

5. $T_A=25^\circ\text{C}$ unless otherwise specified.

RECOMMENDED OPERATING RANGES (Note 6)

Rating	Symbol	Min	Max	Unit
VIN Pin Input Voltage	V_{IN}	0	6	V
BLD/AUX Pin Input Voltage	$V_{BLD/AUX}$	0	6	V
LGATE Pin Input Voltage	V_{LGATE}	0	10	V
CC1 Pin Input Voltage	V_{CC1}	0	5.8	V
CC2 Pin Input Voltage	V_{CC2}	0	5.8	V
LPC pin input voltage	V_{LPC}	0	5	V
GATE pin input voltage	V_{GATE}	0	5.5	V

6. Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

FAN6292BMX/FAN6292MX

ELECTRICAL CHARACTERISTICS

$V_{IN}=5\text{ V}$, $LPC=1.5\text{ V}$, $LPC\text{ width}=2\text{ }\mu\text{s}$ at $T_J=-40\sim 125\text{ }^\circ\text{C}$, $F_{LPC}=100\text{ kHz}$, unless otherwise specified.

FAN6292BMX/FAN6292MX

APPLICATIONS INFORMATION

N-channel MOSFET for Load Switch

FAN6292BMX/FAN6292MX implement Type-C block to enable or disable an external load switch. Internally adapted charge pump lets it control N-channel MOSFET as a load switch. It helps system be more cost competitive compared to P-channel MOSFET as a load switch. Since the minimum pumped voltage is $V_{BUS}+3\text{ V}$, it is recommended to use N-channel MOSFET supporting lower gate threshold levels.

Detail of Load Switch Control

FAN6292BMX/FAN6292MX support output current higher than 1.5 A. In order to meet Type-C specification, 330 μA is applied on CC1 pin and CC2 pin. When R_d (5.1 $\text{k}\Omega$) is attached on either CC1 or CC2, load switch is turned-on after 150 ms debounce time. As soon as load switch is enabled, BC1.2 counter is enabled. To acknowledge detachment, it needs 15 ms (typ.) debounce time. When load switch is turned-off, bleeder is also enabled at the same time.

Green Mode Operation (for FAN6292BMX)

In order to reduce power consumption at light-load conditions with FAN105B system, FAN6292BMX in green mode will disable LPC internal detection block but SR continuously works at mini on time for FAN105B which is a pure primary side controller to normally regulate output voltage. When V_{LPC} is smaller than $V_{LPC-HIGH-L-5V}$ and maintains duration longer than $t_{Green-EN-Debounce}$, FAN6292MX enters green mode where current can be reduced to 0.9 mA (typ.). It leaves green mode when V_{LPC} is larger than $V_{LPC-HIGH-L-5V}$ and maintains duration shorter than $t_{Green-DIS-Debounce}$.

Green Mode Operation(for FAN6292MX)

In order to reduce power consumption at light-load conditions with FAN602 system, FAN6292MX enters the green mode where some internal blocks are disabled such as Synchronous Rectifier control block. Therefore, the operating current can be largely reduced. It enters Green Mode when V_{LPC} is smaller than $V_{LPC-HIGH-L-5V}$ and maintains duration longer than $t_{Green-EN-Debounce}$. It leaves green mode when V_{LPC} is larger than $V_{LPC-HIGH-L-5V}$ and maintains duration shorter than $t_{Green-DIS-Debounce}$.

Bleeder Function

When the portable device is detached, BUS voltage should be discharged to zero within a short time to meet TypeC specification. FAN6292BMX/ FAN6292MX support bleeding function by turning on S1 for $T_{BLD-max}$ as shown in Figure 14. The amount of bleeding current through BLD/AUX pin can be controlled by the external resistor R_{BLD} shown in (1).

$$I_{BLD-RType} = \frac{V_{O_MAX}}{R_{BLD} + R_{Internal}} \quad (1)$$

VIN-UVP Protection(for FAN6292BMX)

Since pure primary side controller detects and regulates output voltage only when switching, it is not easy maintaining output voltage when load suddenly increases from light load where switching frequency is slow to heavy load. Therefore, as Figure 15, FAN6292BMX automatically detects output voltage. When output undershoot is acknowledged via VIN pin, BLD/AUX pin pull-down current via S2 switch to inform undershoot status to primary controller via a photo-coupler. Since the pull-down current is limited through S2, the current will not affect to the amount of output current.

Figure 14 BLD/AUX Function Diagram

Figure 15 VIN-UVP Protection
