

## replacement mine from glass fibre for 2-168 Ø 2 mm (PU12)

**Item no.** **2-169-VE12**  
Content: 12 pcs

### Specification

Made in Germany  
bristles made of glass fibre  
bristles-length 112 mm  
for cleaning soldering or welding spots  
for rust removal, polishing, grinding of smallest parts  
for corrections or etchings  
brush Ø 2 mm  
length 112 mm  
weight 1 g

### Application and technology

SPARE PARTS for: Glass fiber eraser / rust eraser as handy and practical assistant for corrections or etchings, for cleaning soldering or welding points (before and after), for rust removal or polishing as well as grinding of the smallest surfaces. The eraser can also be used for model construction to smooth surfaces or for cleaning and lightening wood. Likewise, adhesive residue on window glass can be removed.

We recommend to try the glass fiber eraser in an invisible area. The eraser consists of a writing sleeve which is, depending on the size, a 2 or 4 mm thick glass fiber mine. The integrated turning or printing mechanism allows infinitely variable length variation of the glass fiber lead. If a mine is used up, it is simply exchanged for a replacement mine.
