

S50-PA/MA...M

Background suppression proximity

S50-PA/MA...N

Foreground-background suppression proximity

INSTRUCTION MANUAL

CONTROLS

OUTPUT LED

The yellow LED ON indicates that the NO output status is closed.

READY/ERROR LED (bicolour)

When the bicoloured LED is continuously green, the sensor is operating in a normal condition and it is ready to function correctly (stability condition).

The red and green blinking of the LED indicates a wrong sensor setting. Please refer to the "SETTING" paragraph to get the correct setting procedure.

SET PUSHBUTTON

A long pressure on the pushbutton activates the self-setting procedure.

INSTALLATION

S50-PA...M/N: The sensor can be fixed by means of the M18x1 threaded body through a \varnothing 18mm hole, using the specific washer and the two CH.24 nuts enclosed (1.5Nm maximum tightening torque). Alternatively, the sensor can be mounted through the two housing's holes using two screws (M3x22 or longer) and washer. Amongst the various possible solutions, we suggest to choose the combination that offers the best visibility of the signalling LEDs and the easiest access to the SET pushbutton. 22mm nuts, h=8mm, (2Nm maximum tightening torque) are available to guarantee an improved torque.

S50-MA...M/N: The sensor can be fixed by means of the M18x1 threaded body through a \varnothing 18mm hole, using the specific washer and the two CH.24 nuts enclosed (22Nm maximum tightening torque).

For both plastic version and metallic version are available various orientable fixing brackets to ease the sensor positioning (please refer to the accessories listed in the general catalogue).

The operating distance is measured from the front surface of the sensor lens. To improve the detection, the object has to be moved closer or further away from the front surface of the sensor lens.

In case of lateral translation, the object must move as indicated in the figure.

CONNECTIONS

The connections are compliant to the EN 60947-5-2 standard.

SETTING

EASY TOUCH™

The sensor uses the patent-covered EASY TOUCH™ technology that allows a rapid and safe self-setting of the product.

Two different setting possibilities are available:

- **EASY TOUCH™**; a long pressure of the SET pushbutton allows self-setting.
- **FINE DETECTION**; to be used only in particularly critical conditions; this setting procedure is used only when the EASY TOUCH™ is not sufficient.

Setting of S50-PA/MA...M

To achieve a correct sensor setting, the background or the object to be suppressed has to be present during self-setting.

- **EASY TOUCH™ (standard detection)**

Place the background or the object to be suppressed inside the operating range.

Press the SET pushbutton until the READY/ERROR LED turns OFF.

Release the SET pushbutton and wait for the READY/ERROR LED to turn green.

The sensor is now ready to detect all objects in the set range distinguishing them from the suppressed background (output LED turns ON).

- **Fine detection**

Place the background or the object to be suppressed inside the operating range.

Press the SET pushbutton. The READY/ERROR LED turns OFF.

Keep the SET pushbutton pressed until the READY/ERROR LED blinks green.

The sensor performs a fine adjustment and is ready to detect objects also very near the suppressed background (output LED turns ON).

Setting of S50-PA/MA...N

To achieve a correct sensor setting, the object to be detected has to be used during self-setting.

- **EASY TOUCH™ (standard detection)**

Place the object to be detected in front of the sensor inside the operating range.

Press the SET pushbutton until the READY/ERROR LED turns OFF.

Release the SET pushbutton and wait for the READY/ERROR LED to turn green.

The sensor is ready to detect the object (output LED turns ON) excluding the background and foreground range (and thus any object closer to the sensor respect to the reading field).

- **Fine detection**

Place the object to be detected inside the operating range.

Press the SET pushbutton. The READY/ERROR LED turns OFF.

Keep the SET pushbutton pressed until the READY/ERROR LED blinks green.

The sensor performs a fine adjustment and is ready to detect with better precision objects (output LED turns ON) at the pre-set operating distance, suppressing the background and foreground, even if the latter is very close to the sensing range.

DECLARATION OF CONFORMITY

We DATASENSOR S.p.A. declare under our sole responsibility that these products are conform to the 89/336 CEE, 73/23 CEE Directives and successive amendments.

WARRANTY

DATASENSOR S.p.A. warrants its products to be free from defects.

DATASENSOR S.p.A. will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date.

This warranty does not cover damage or liability deriving from the improper application of DATASENSOR products.

SETTING

Setting of S50-PH/MH...B01

Position the sensor and reflector on opposite sides.

Turn the sensitivity trimmer to the maximum position.

Moving the sensor both vertically and horizontally, determine the power ON and OFF points of the OUTPUT LED and then mount the sensor in the middle of the points defined.

If necessary reduce sensitivity in order to detect very small targets.

In order to improve alignment, repeat the given procedure whilst progressively reducing the sensitivity.

Setting of S50-PH/MH...F01/G00

Position the sensor and reflector on opposite sides.

Turn the sensitivity trimmer to maximum: moving the sensor both vertically and horizontally, determine the power ON and OFF points of the OUTPUT LED and then mount the sensor in the middle of the points defined.

If necessary, reduce sensitivity using the trimmer, in order to detect very small targets. In order to improve alignment, repeat the procedure detailed above whilst progressively reducing the sensitivity.

Setting of S50-PH/MH...C01

Turn the sensitivity trimmer to minimum: the OUTPUT LED is OFF.

Position the target to detect in front of the sensor.

Turn the sensitivity trimmer clockwise until the OUTPUT LED turns ON (*Target detected state, pos.A*).

Remove the target, the OUTPUT LED turns OFF.

Turn the sensitivity trimmer clockwise until the OUTPUT LED turns ON (*Background detected state, pos.B*).

The trimmer reaches maximum if the background is not detected.

Turn the trimmer to the intermediate position C, between the two positions A and B.

TEST FUNCTION (S50-PH/MH...G00)

The TEST+ input can be used to deactivate the emitter and verify that the system is operating correctly.

The receiver output should switch when the test is activated while the beam is uninterrupted.

The input activating voltage range is 10...30 Vdc.

SETTING

The supplied sensor is set at the maximum sensitivity, allowing the detection of the minimum luminescence intensity. No other setting procedure is necessary, unless luminescent objects placed on luminescence backgrounds have to be detected.

EASY TOUCH™

The sensor uses the patent-covered EASY TOUCH™ technology that allows a rapid and safe self-setting of the product. Two different setting possibilities are available:

- **EASY TOUCH™**: a long pressure of the SET pushbutton allows self-setting.
- **FINE DETECTION**: to be used only in particularly critical conditions, this setting procedure is used only when the EASY TOUCH™ is not sufficient.

Setting of S50-PA/MA...U

To achieve a correct sensor functioning, the luminescence mark or object to be detected has to be placed at the right reading distance.

- **EASY TOUCH™ (standard detection in the LIGHT mode)**

The EASY TOUCH™ technology allows the functioning in the LIGHT mode (mark presents a higher luminescence respect to the background).

The mark to detect has to be placed correctly at the right reading distance within the sensor spot.

Press the SET pushbutton until the READY/ERROR LED turns OFF. Release the SET pushbutton and wait for the READY/ERROR LED to turn green.

The sensor is now ready to detect the pre-set luminescent mark or object (output LED turns ON when the NO output is closed).

Note: The automatic EASY TOUCH™ setting has to be performed without any objects inside the sensor reading range (or using a non-luminescent object) in order to bring the sensor back to the maximum sensitivity condition.

- **Fine detection (DARK or LIGHT mode)**

This mode offers an improved detection precision and also allows the detection of luminescent marks or objects placed on luminescent backgrounds.

The operating mode is selected automatically by the sensor:

DARK operating mode (mark presents a lower luminescence respect to the background) or LIGHT operating mode (mark presents a higher luminescence respect to the background).

The mark to detect has to be placed correctly at the right reading distance within the sensor spot.

Press the SET pushbutton. The READY/ERROR LED turns OFF. Keep the SET pushbutton pressed until the READY/ERROR LED blinks green. Place the background under the sensor spot. Press the SET pushbutton again until the READY/ERROR LED turns OFF. The sensor is now ready to detect, with a very high precision, the pre-set luminescent mark (output LED turns ON, READY/ERROR LED turns green).

DECLARATION OF CONFORMITY

We DATASENSOR S.p.A. declare under our sole responsibility that these products are conform to the 89/336 CEE, 73/23 CEE Directives and successive amendments.

WARRANTY

DATASENSOR S.p.A. warrants its products to be free from defects. DATASENSOR S.p.A. will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date.

SETTING

EASY TOUCH™

The sensor uses the patent-covered EASY TOUCH™ technology that allows a rapid and safe self-setting of the product.

Two different setting possibilities are available:

- **EASY TOUCH™**; a long pressure of the SET pushbutton allows self-setting.
- **FINE DETECTION**; to be used only in particularly critical conditions, this setting procedure is used only when the EASY TOUCH™ is not sufficient.

Setting of S50-PA/MA...W

To achieve a correct sensor functioning, the coloured mark or object to be detected has to be placed at the right reading distance.

- **EASY TOUCH™ (standard detection in the DARK mode)**

The EASY TOUCH™ technology allows the functioning in the DARK mode (mark presents a lower light intensity respect to the background).

The mark to detect has to be placed correctly at the right reading distance within the sensor spot.

Press the SET pushbutton until the READY/ERROR LED turns OFF.

Release the SET pushbutton and wait for the READY/ERROR LED to turn green.

The sensor is now ready to detect the pre-set coloured mark or object (output LED turns ON when the NO output is closed).

- **Fine detection (DARK or LIGHT mode)**

This mode offers an improved detection precision.

The sensor can function either in the DARK operating or in the LIGHT operating mode (light-coloured mark ON dark background).

The operating mode is selected automatically by the sensor.

The mark to detect has to be placed correctly at the right reading distance within the sensor spot.

Press the SET pushbutton. The READY/ERROR LED turns OFF.

Keep the SET pushbutton pressed until the READY/ERROR LED blinks green. Place the background under the sensor spot.

Press the SET pushbutton again until the READY/ERROR LED turns OFF.

The sensor is now ready to detect, with a very high precision, the pre-set coloured mark (output LED turns ON, READY/ERROR LED turns green).

The output LED is ON and the NO output is closed, when the sensor is positioned on the pre-set coloured mark.

NOTE

If a setting error will occur please repeat again the EASY TOUCH setting procedure, in order to be sure to restart the setting procedure correctly.

SETTING

No sensor setting is necessary.

The user has to select the direct or inverse proportionality of the output respect to the object's distance inside the operating field. This is obtained by means of the DIR/INV input.

The direct proportionality is set connecting the DIR/INV input to +Vdc;

the inverse proportionality is set connecting the DIR/INV input to 0V.

DECLARATION OF CONFORMITY

We DATASENSOR S.p.A. declare under our sole responsibility that these products are conform to the 89/336 CEE, 73/23 CEE Directives and successive amendments.

WARRANTY

DATASENSOR S.p.A. warrants its products to be free from defects. DATASENSOR S.p.A. will repair or replace, free of charge, any product found to be defective during the warranty period of 36 months from the manufacturing date. This warranty does not cover damage or liability deriving from the improper application of DATASENSOR products.
