

Overview of Military Resistors from Vishay Dale

MILITARY QUALIFICATIONS

- Film Technology
 - MIL-R-10509 Leaded Metal Film Resistor, type RN
 - MIL-PRF-22684 Leaded Metal Film Resistor, type RL
 - MIL-PRF-32159 Thick Film Chip Jumper, E-Rel type RCZ
 - MIL-PRF-39017 Leaded Metal Film Resistor, E-Rel type RLR
 - MIL-PRF-55182 Leaded Metal Film Resistor, E-Rel type RNC / RNR / RNN
 - MIL-PRF-55342 Thick Film / Thin Film Chip Resistor, E-Rel type RM
- Wirewound Technology
 - MIL-PRF-26 Leaded Wirewound Resistor, type RW
 - MIL-PRF-18546 Housed Wirewound Resistor, type RE
 - MIL-PRF-39007 Leaded Wirewound Resistor, E-Rel type RWR
 - MIL-PRF-39009 Housed Wirewound Resistor, E-Rel type RER
 - MIL-PRF-49465 Leaded Metal Element Resistor, type RLV
- Networks
 - MIL-PRF-83401 Thick Film / Thin Film Resistor Network, type RZ

MILITARY RESISTORS 101

Introduction

Introduction

Vishay's line of high-reliability products reflects a long-term commitment to our military customers. As one of the largest suppliers of military components, we continually strive to meet the changing application requirements of the defense, avionics and aerospace markets by developing new products and manufacturing technologies on an on going basis.

Vishay has one of the broadest lines of military-qualified resistors in the industry, and our high-reliability devices can be found in nearly every existing military program, including aircraft, satellites, missiles, weapons, ground vehicles, and ships.

Vishay is equipped to design and produce custom components to meet many design and reliability demands. In addition to standard military-grade resistor products, we also have many resistive products designed to meet various military source-controlled drawings.

Every component Vishay provides to the military, avionics and aerospace markets is backed by the comprehensive testing and failure analysis capabilities of our own technical staff, who are industry experts in understanding and meeting the requirements of the military environment. Our technical expertise, our knowledge of the military industry, our broad product offering, and our ability to work long-term are all part of Vishay's ongoing commitment to meeting the changing requirements of our most reliability-conscious customers, today and in the future.

Target Applications

- Aircraft
- Avionics
- Satellites
- Surveillance
- Communications systems
- Naval vessels
- Sonar
- Missile systems
- Weaponry
- Radar
- Ground vehicles
- Space, ocean, and deep earth exploration
- Medical instrumentation and medical implantables

MILITARY RESISTORS 101

Product Information – Networks

Network Technology

MIL Spec	Product Type		MIL Style	Power Rating (Watts)	Value Range (Ohms)	Tol. Range (± %)	TCR Range (± ppm/°C)	Failure Rate Range

¹ With ± 5 ppm/°C TC tracking between resistive elements.

Thick Film Military Networks

MIL-PRF-83401, Type RZ

MSM Series, Slash Sheets 04 - 09, 18, 19 and 24

MDM Series, Slash Sheets 01 - 02

DFM Series, Slash Sheets 03

- Thick film element in a rugged molded case construction
- Available in isolated, bussed, and dual terminator schematics
- Hot solder dipped leads

Thin Film Military Networks

MIL-PRF-83401, Type RZ

M83401 Series, Slash Sheets 07 – 09 and 21 – 23

- Thin film element in a rugged molded low profile construction with standoff
- Available in isolated or bussed schematics
- Tolerances to 0.1% and TC's to 25ppm/°C

MILITARY RESISTORS 101

Product Information – Networks

Resistors - Military Resistors 101

Style Comparison of Vishay Thick Film Networks

Parameter	Military (MDM, MSM, DFM)	Industrial (MDP, MSP, DFP)	Commercial (CSC)
Electrical Specifications	All components conform to military power ratings. Tolerance, resistance and TCR are supplied according to the “Qualified Products List” for MIL-PRF-83401.	Electrical specifications detailed in the Vishay Dale catalog. Industrial power ratings are generally higher than military components. This is possible because industrial components do not have the same reliability requirements.	Electrical specifications detailed in the Vishay Dale catalog. Commercial power ratings are the same as industrial counterparts.
Mechanical Dimensions	Components conform to MIL-PRF-83401.	Dimensions are detailed in the Vishay Dale catalog. Equivalent industrial components are basically the same size as the military components and will fit into the same packages and board spacing.	Dimensions are detailed in the Vishay Dale catalog. Equivalent commercial components are basically the same size as the military components and will fit into the same packages and board spacing.
Material Requirements	All materials for the military components are approved for use within the specific components’ military qualification. All materials are baselined and cannot be modified or substituted without military approval, by request or re-qualification. No materials can be used in their manufacture without labels showing acceptance through incoming inspection.	Most materials are the same for military equivalent components and also require inspection acceptance labels. Materials are not qualified on a military controlled baseline, but are typically internally required to allow the component to meet the MIL-PRF-83401 military specification.	Uses low cost materials that are similar to those used for the Industrial components. Internal qualification of changes does not require a governing agency’s approval.
Process and Test Requirements	Components conform to MIL-PRF-83401 military specifications, and are manufactured using military qualified and documented processes. Requires 1000 hour load life in addition to other rigid environmental testing to conform to the above specifications. 100 % screen tested per MIL-PRF-83401’s Group A.	Do not have additional processing and screening tests that military equivalent components require. Process modifications to conform to special or unique customer requirements is allowed. Only internal qualifications required for major process changes.	Process modifications to conform to special or unique customer requirements are generally not allowed. Product 100 % electrically tested before shipping.
Reliability	Periodic internal testing to specific environmental and electrical parameters derived from the MIL-PRF-83401 military specification are incorporated. Components are pulled from actual production and tested to conformance. Product specific statistics are available upon request.	Periodic internal testing to specific environmental and electrical parameters derived from the MIL-PRF-83401 military specification is incorporated. Components are pulled from actual production and tested to conformance. Product specific statistics are available upon request.	Failure rate is based on field failures, which are the total number of failures versus the total number of products shipped.
Customer Application	Military, space, and medical applications.	Wide range of applications including communications, military, computer, test and control electronics.	Wide range of applications including computer, telecom, and consumer electronics.
Traceability	All component materials are required to be traceable.	Materials are generally not required to be traceable. Traceability can be incorporated on components as a “special” if required by a customer.	Materials are generally not required to be traceable.

Resistors - Military Resistors 101

MILITARY RESISTORS 101

Product Information – Film Axial Leaded

Resistors - Military Resistors 101

Metal Film Military Resistors

**MIL-R-10509, Type RN,
MIL-PRF-22684, Type RL
CMF Series**

- Available in MIL sheet sizes 50, 55, 60, 65 and 70 for RN style, and sizes 07 and 20 for RL style
- Full material and process traceability
- Values range from 0.1 Ω to 50 MΩ (far beyond military spec value limits)

Established Reliability Metal Film Military Resistors

**MIL-PRF-39017, Type RLR
ERL Series**

- Available in MIL sheet sizes 05, 07, 20 and 32
- Verified failure rates
 - S failure rate standard for most sizes
 - M, P, R failure rate levels also available
- Full material and process traceability
- DSCC drawing (non-QPL) available on multiple sizes to extended resistance ranges

Established Reliability Metal Film Military Resistors

**MIL-PRF-55182, Type RNC/RNR
ERC Series**

- Available in MIL sheet sizes 50, 55, 60, 65 and 70
- Characteristics J, H and K (non hermetically sealed)
- Verified failure rates
 - S failure rate standard for most sizes
 - M, P, R failure rate levels also available
- Full material and process traceability

Established Reliability Metal Film Military Resistors

**MIL-PRF-55182, Type RNR/RNN
HDN Series**

- Available in MIL sheet sizes 55, 57, 60, 65, 70 and 75
- Characteristics C and E (hermetically sealed)
- Verified failure rates
 - S failure rate standard for most sizes
 - M, P, R failure rate levels also available
- Full material and process traceability

Style Comparison of Vishay Metal Film Axial Resistors

Parameter	E-REL MILITARY RLR: (Vishay DALE ERL) RNC: (Vishay DALE ERC)	NON E-REL MILITARY/INDUSTRIAL (Vishay DALE CMF Prefix Designation)	COMMERCIAL CCF
Electrical Specifications	All components conform to military power ratings. Tolerance, resistance and TCR are supplied according to the “Qualified Products List” for MIL-PRF-39017 for RLR series and MIL-PRF-55182 for RNC series.	Non E-Rel power ratings are the same as E-Rel counterparts. Frequently used at the industrial power ratings, which are generally higher than those for E-Rel components.	Electrical specifications detailed in the Vishay Dale catalog. Commercial power ratings are generally higher than E-Rel components. This is possible because commercial components do not have the same reliability requirements.
Mechanical Dimensions	Components conform to MIL-PRF-39017 for the Vishay Dale RLR series. Components conform to MIL-PRF-55182 for the Vishay Dale RNC series.	Components conform to MIL-PRF-22684 for the Vishay Dale RL series. Components conform to MIL-R-10509 for the Vishay Dale RN series.	Dimensions are detailed in the Vishay Dale catalog. Equivalent commercial components are basically the same size as the military components and will fit into the same packages and board spacing.

Established Reliability Thick Film Military Chip Jumpers

MIL-PRF-32159, Type RCZ RCWPM Jumper Series

- Available for MIL sheets /01 through /13
- Verified failure rate
 - C, M failure rate levels available
- Termination style
 - Standard pre-tinned nickel barrier wraparound (style B)

Established Reliability Thick Film Military Chip Resistors

MIL-PRF-55342, Type RM RCWPM Series

- Available for MIL sheets /01 through /13
- Verified failure rate
 - C, M, P, R, U, S, V, T failure rate levels available
- Available in K (100 ppm), L (200 ppm) or M (300 ppm) characteristics
- Termination style
 - Standard pre-tinned nickel barrier wraparound (style B)

MILITARY RESISTORS 101

Product Information – Film Surface Mount

Established Reliability Thin Film Military Chip Resistors

MIL-PRF-55342, TYPE RM

E/H Series

- Available for MIL Sheets /01 through /12
- Verified failure rate
 - C, M, P, R, U, T failure rate levels available
- Available in characteristics E (25 ppm), H (50 ppm), K (100 ppm), L (200 ppm) or M (300 ppm)
- Termination style
 - Standard pre-tinned nickel barrier wraparound (style B)

Style Comparison of Vishay Thick Film / Thin Film Chip Resistors

Parameter	Military (RCWPM, 55342)	Industrial (RCWP, P-NS, PTN)	Commercial (CRCW, M)
Construction and Materials	All materials conform to MIL-PRF-55342 and are supplied according to the "Qualified Products List"; Terminations = Precious metal base conductor, Sulfur Impervious, nickel barrier, and 80/20 solder finish. (100 % Sn not allowed). "JAN" branded; Space Level available. No material changes made without DSCC approval.	The same materials as Military chips; 100 % Sn solder is available. RCWP-540 and RCWP-0201 sizes are available. No "JAN" brand. Process change qualifications are not DSCC approved. Qualifications of standard product based on military chip qualification.	Manufactured to EIA-575 with exceptions; RM-1005, RM-1505; RM-2208, RM-1010, RM-0502, and RM-0302 sizes are not available. Silver Base Conductor. 90/10 or 100 % Sn terminations. No "JAN" brand. Internal qualification of changes does not require a governing agency's approval.
Processing and Line Control	Manufactured using military qualified and documented processes. Group-A screening including 100 % pre-cap visual, thermal shock, 100 % visual inspection, and dc resistance. MIL-STD-790 training required. No major process changes made without DSCC approval.	100 % Group-A thermal shock is included with 5 % Percent Defects Allowed (PDA) Process modifications to conform to customer requirements are allowed. Only internal qualifications required for major process changes.	Only internal qualifications required for major process changes. Group-A thermal shock is not done; No 100 % visual inspection required; No PDA requirement; Process modifications to conform to special or unique customer requirements are generally not allowed.
Inspection	Inspection per MIL-PRF-55342; Electrical defects; C = 0 Mechanical defects; C = 0 Visual defects; C = 0 Inspection quality levels: First Submission Electrical = 27 ppm Average Outgoing Visual/mechanical = 30 ppm	Inspection MIL-STD-105 Level II; 1 % AQL major; 4 % AQL minor; C = 0 critical Inspection quality levels: First Submission Electrical = 227 ppm Average Outgoing Visual/mechanical = 24 ppm	Inspection MIL-STD-105 Level I; 1 % AQL major; 4 % AQL minor; C = 0 critical Inspection quality levels: Electrical AOQ = 6 ppm (15 000 pc. Sample/week) Average Outgoing Visual/mechanical = 267 ppm
Reliability	An "Established Reliability" quality level is determined by continuously testing thousands of components in a qualified laboratory. The reliability "Failure Rate Level" is specified in the MIL-PRF-55342 military specification and is derived from the laboratory data. Product specific statistics are available upon request.	Periodic internal testing to specific environmental and electrical parameters is based on MIL-PRF-55342. No failure rate data is available.	Failure rate is based on field failures, which are the total number of failures versus the total number of products shipped.
Traceability	Conforms to MIL-PRF-55342; All Group-A, Group-B, and Group-C test data is recorded and retained for a minimum of 5 years. Only single lots and date codes allowed on a reel.	Final inspection data is retained for a minimum of 1 year; In special cases, multiple date codes and/or production lots may be allowed on a single reel.	Final inspection data is retained for a minimum of 1 year.

MILITARY RESISTORS 101

Fixed Wirewound Military Resistors

MIL-PRF-26, Type RW
RS, NS Series
G, GN Series

- Available in either standard (RS and G) or non-inductive (NS and GN) winding
- 9 Sizes (1 W to 11 W)

Established Reliability Fixed Wirewound Military Resistors

MIL-PRF-39007, Type RWR
ESS, ESW, ESN Series
EGS, EGW, EGN Series

- 100 % power stabilization and screening test
- Available in either standard (RWRxxS) or non-inductive (RWRxxN) winding
- 8 Sizes (1 W to 10 W)
- S failure rate available

MILITARY RESISTORS 101

Product Information – Wirewound/Metal Element Axial Leaded

Fixed Metal Element Military Resistors

MIL-PRF-49465, Type RLV

LVR Series

SPR-1005 Series

- Extremely low resistance values
- Ideal for current sensing applications

Style Comparison Of Vishay Wirewound Axial Resistors

Parameter	RWR E-REL MILITARY ESS, EGS (Vishay Dale) ESN, EGN (Vishay Dale)	RW NON E-REL RS (Vishay Dale) NS (Vishay Dale)
Electrical Specifications	All components conform to the electrical requirements of MIL-PRF-39007.	All components conform to the electrical requirements of MIL-PRF-26.
Mechanical Specifications	All components conform to the mechanical requirements of MIL-PRF-39007.	All components conform to the mechanical requirements of MIL-PRF-26.
Material Requirements	All materials for the E-Rel military components are approved for use per MIL-PRF-39007. All materials are baselined and cannot be modified or substituted without military approval by request and/or requalification. No materials can be used in their manufacture without labels showing acceptance through incoming inspection.	Most materials are the same for E-Rel equivalent components and also require inspection acceptance labels. Materials are not qualified on a military controlled baseline, but are internally required to allow the components to meet MIL-PRF-26 specification.
Process and Test Requirements	The RWR series conforms to MIL-PRF-39007, which includes 100 % 100 hour power conditioning. Reliability determination requires 10 000 hour load life in addition to other rigid environmental testing to conform to the above specification.	Do not have additional processing and screening tests that E-Rel equivalent components require.
Reliability	An “Established Reliability” quality level is determined by continuously testing thousands of components in a qualified laboratory. The reliability “Failure Rate Level” is specified in the MIL-PRF-39007 military specification and is derived from the laboratory data. Product specific statistics are available upon request.	Periodic internal testing to specific environmental and electrical parameters derived from the MIL-PRF-26 military specifications are incorporated. Product specific statistics are available upon request.
Customer Application	Military, space, medical, and other high-reliability applications.	Wide range of applications including communications, military, computer, industrial, test and control electronics.
Traceability	All component materials are required to be traceable.	Materials are generally not required to be traceable. Traceability can be incorporated on components as a “special” if required by customer.
Packaging	Available in either bulk or reeled.	Available in either bulk or reeled.

Wirewound Chassis Mount Military Resistors

MIL-PRF-18546, Type RE RH, NH Series

- Aluminum housed standard (RExxG) or non-inductive (RExxN) winding/molded construction gives complete environmental protection
- Mounts on chassis for high stability at conventional power ratings
- 6 sizes (5 W to 120 W)

Established Reliability Wirewound Chassis Mount Military Resistors

MIL-PRF-39009, Type RER ERH, ENH Series

- Aluminum housed standard (RERxxG) or non-inductive (RERxxN) winding/molded construction gives complete environmental protection
- Mounts on chassis for high stability at conventional power ratings
- Utilize heat sink effect
- 4 Sizes (5 W to 20 W)
- R failure rate

A-A-55534/01	Resistor, Fixed, Wirewound or Metal Element, (Power Type), Style VLV1	X		
A-A-55534/02	Resistor, Fixed, Wirewound or Metal Element, Chip, (Power Type), Style VLV1206	X		
A-A-55534/03	Resistor, Fixed, Wirewound or Metal Element, (Power Type), Style VLV3	X		
A-A-55534/04	Resistor, Fixed, Wirewound or Metal Element, (Power Type), Style VLV5	X		
A-A-55534/07	Resistor, Fixed, Wirewound or Metal Element, Chip, (Power Type), Style VLV2010	X		
A-A-55534/08	Resistor, Fixed, Wirewound or Metal Element, Chip, (Power Type), Style VLV2512	X		
A-A-55534/09	Resistor, Fixed, Wirewound or Metal Element, Chip, (Power Type), Style VLV2	X		

Resistors - Military Resistors 101

MILITARY RESISTORS 101

Terminology

Common Terminology

C of C (Certificate of Conformance)

- Material supplied to MIL Specs shall be accompanied by a C of C, which may include:
 1. Original manufacturer's name, address, telephone number and CAGE number
 2. Purchase order number
 3. Part number
 4. Drawing or specification number and revision
 5. Serial numbers or date code or lot number (as applicable)
 6. QA signature and date
 7. Statement of conformance to all requirements

Note: The supplier shall also retain the C of C and all relevant supporting data on file for a period of time after completion of the purchase order.

CAGE Code (Commercial and Government Entity code)

- A five-digit number assigned to a company to represent the company's physical address. Formerly referred to as FSCM (Federal Supply Code for Manufacturers). It is used for mailing, payments and administrative records. A vendor cannot do business with the government without a CAGE code.

COTS (Commercial Off The Shelf)

- Any item of supply that is (i) a commercial item; (ii) sold in substantial quantities in the commercial marketplace; and (iii) offered to the government, without modification, in the same form in which it is sold in the commercial marketplace.

Date Code Restriction

- Product must be manufactured within a specified period of time prior to shipment.

DFAR (Defense Federal Acquisition Regulations)

- Procurement regulations used by organizations in the Department of Defense. Also called Defense Acquisition Regulations (DAR).

DFARS (Defense Federal Acquisition Regulations Supplement)

- Interpretation and regulations specifically for Department of Defense Procurement. Supplements the Federal Acquisition Regulations (FAR).

DFARS 252.225-7014, Preference for Domestic Specialty Metals, Alt I

- Specifies that specialty metals must be melted in the United States or a qualifying country, or they can be melted anywhere but must be incorporated in an article manufactured in a qualifying country.
- Vishay DALE Resistors are DFARS Compliant.

DLA (Defense Logistics Agency)

- The Department of Defense (DoD) Agency responsible for supplying military needs. The Agency is headquartered at Ft. Belvoir, VA and maintains several Inventory Control Points (ICPs) including DLA Land and Maritime, DLA Troop Support, and DLA Aviation.

DLA Aviation (former DSCR)

- Serves as the Aviation supply chain manager for the Defense Logistics Agency. They support major weapon systems and are one of the U.S. military's integrated materiel managers for repair parts and operating supply items. They manage aviation parts, including spares for engines on fighters, bombers, cargo aircraft and helicopters; airframe and landing gear parts; flight safety equipment; and propeller systems.

MILITARY RESISTORS 101

Terminology

DLA Land and Maritime (former DSCC)

- Serves as the Maritime and Land weapons systems supply chain manager for the Defense Logistics Agency. DLA L&M is one of the U.S. Military's largest suppliers of weapon systems spare parts, and they also manage the MIL Specs and Drawings for the DLA.

DLA Troop Support (former DSCP)

- Provides United States armed services members with food, clothing, textiles, medicines, medical equipment, and construction supplies and equipment. They also support United States humanitarian and disaster relief efforts.

DPA (Defense Production Act)

- Under authority of the Defense Production Act of 1950 and related executive Order 12656, the Commerce Department is charged with identifying critical defense-related industries, assessing their capability to meet peacetime and national security needs, identifying current and potential production constraints, and proposing remedial actions as appropriate. Title I of the DPA requires that: (i) contracts or orders relating to certain approved defense and energy programs be accepted and performed on a preferential basis over all other contracts and orders and (ii) materials, facilities, and services be allocated in such a manner as to promote approved programs, facilities, and services be allocated in such a manner as to promote approved programs.

DPAS (Defense Priorities and Allocation System)

- The goals of the DPAS are to (i) assure the timely availability of industrial resources to meet current national defense requirements and (ii) provide a framework for rapid industrial expansion in case of a national emergency.
 - There are two levels of priority established by this regulation, identified by the rating symbols "DO" and "DX". All DO rated orders have equal priority with each other and take preference over unrated orders. All DX orders have equal priority with each other and take preference over DO rated orders and unrated orders.

DSC, DSCC, DSCP, DSCR

- Former abbreviations for the Supply Centers, which procure supplies for the Military. Each Supply Center manages different types of items.
- DSC = Defense Supply Center
 - DSCC = Defense Supply Center Columbus (Columbus, OH) – now DLA Land and Maritime
 - Maritime and land weapon systems support
 - DSCP = Defense Supply Center Philadelphia (Philadelphia, PA) – now DLA Troop Support
 - Food, clothing, medical, construction, and equipment support
 - DSCR = Defense Supply Center Richmond (Richmond, VA) – now DLA Aviation
 - Aviation weapon systems and environmental logistics support

EDI (Electronic Data Interchange)

- The electronic communications of business transactions; specifically the exchange of trade-related documents such as purchase orders, invoices, and corporate Electronic Funds Transfer (EFTs) in a standard format.

ESD (Electrostatic Sensitive Devices)

- The devices supplied under contract shall be packaged in accordance with the latest revision of the MIL-STD- 1686 (Electrostatic Discharge Control Program for Protection of Electronic Devices) and MIL-HDBK-263 (ESD Handbook for Protection Parts, Assemblies and Equipments). Packaging shall be marked with an ESD cautionary note or symbol.

E-REL (Established Reliability)

- A quantitative maximum failure rate demonstrated under controlled conditions specified in a Department of Defense specification and usually expressed as percent failures per thousand hours of test.

Failure Rate

- The probability of failure per unit of time of items in operation. Sometimes estimated as a ratio of the number of failures to the accumulated operating time for the items.

Failure Rate Level Designation / Symbol	Failure Rate (Percent/1000 Hours)
C	Non-Established Reliability
M	1
P	0.1
R, U ¹	0.01
S, V ¹	0.001
T	Space Level

¹ Failure rates U and V require Group A and B inspection run on each production lot.

Failure Rate	Failure Rate Substitution
T (Space)	–
V (0.001) ¹	–
U (0.01) ¹	V
S (0.001)	V
R (0.01)	V, U, S
P (0.1)	V, U, S, R
M (1.0)	V, U, S, R, P
C (Non-ER)	V, U, S, R, P, M

¹ Failure rates U and V require Group A and B inspection run on each production lot.

FAR (Federal Acquisition Regulations)

- The main guidance for procurement supplies and services in the Federal Government. Procurement regulations used by both civilian and defense organizations.

FAT (First Article Testing)

- A performance test required on certain items prior to manufacture. A specified sample of the product is tested and must be approved prior to manufacture of a full production run. Testing is generally extensive and expensive.

FIT (Failures In Time)

- The number of component failures that can be expected in one billion hours of operation.

FSC (Federal Stock Class)

- A term for the first four digits of an NSN. It identifies government procured commodities into broad categories. Defense Supply Center management responsibilities are divided based on assignment of FSCs.

FSG (Federal Supply Group)

- The first two digits of a four digit federal stock class (FSC) and therefore, the first two digits of an NSN. It is the broadest categorization of an item.

ITAR Compliance

- Information contained on documentation may be subject to International Traffic Arms Regulations (ITAR) or Export Administration Regulations (EAR) Controls and may not be disclosed to any foreign person(s) or firms, including persons employed by or associated with your company, without first complying with all requirements of the ITAR, 22 CFR 120-130 and the EAR, 15 CFR 730-774.

Military Drawings

- Some items at the DSCs are required to be manufactured in accordance with a drawing. The drawing may have been designed by either a government agency or a commercial vendor. If a drawing is cited in the Acquisition Item Description (AID), the vendor is responsible for assuring the product offered meets the standards and requirements of the drawing.

Military Handbooks

- MIL-HDBKs are generally how to do documents intended to standardize and educate.

Military Specs

- Some items at the DSCs are required to be manufactured in accordance with a specification. The specification may be designated as a Federal Specification (Fed-Spec - applicable to all military services), a Military Specification (MIL-

MILITARY RESISTORS 101

Terminology

Spec - used by a specific service) or a commercial specification such as North American Specification (NAS) or American National Standards Institute (ANSI). If a specification is cited in the Acquisition Item Description (AID), the vendor is responsible for assuring the product offered meets the requirements of the specification.

Military Standards

- MIL-STDs are generally documents that imposed requirements and give details on what to do.

MIL-STD-202G Test Methods Standard Electronic and Electrical Component Parts

- This military standard establishes uniform methods for testing electronic and electrical component parts, including basic environmental tests to determine resistance to deleterious effects of natural elements and conditions surrounding military operations, and physical and electrical tests.

MIL-STD-883F Test Method Standard Microcircuits

- This military standard establishes uniform methods, controls, and procedures for testing microelectronic devices suitable for use within Military and Aerospace electronic systems including basic environmental tests and other controls and constraints as have been deemed necessary to ensure a uniform level of quality and reliability suitable to the intended applications of those devices.

MTBF (Mean Time Between Failures)

- The average time a component works without failure. It is the number of failures divided by the hours under observation.

NIIN (National Item Identification Number)

- The second of two main parts of the National Stock Number. The NIIN is a unique number with no two items having the same NIIN. An item can be tracked in technical files using just the NIIN. Contract files require the full NSN to track information.

NSN (National Stock Number)

- A unique government tracking number assigned by the General Services Administration consisting of a Federal Stock Class (FSC) and a National Item Identification Number (NIIN). The number is used by requisitioners to identify the item needed and is associated with all buys related to that item. More than one part number may be associated with an NSN; however, all parts associated will have to be the same in form, fit and function.

Prohibited Materials (Tin Whiskers)

- Unless otherwise specified in the product specification, material supplied meet the requirements of ANSI/J-STD-002, Category 3 Test Method A, B, or C as applicable. In addition, constructions and finishes containing pure tin are prohibited unless they contain a minimum of 3 percent by weight alloying element(s) (i.e. lead, silver, etc.).

QPL (Qualified Products List)

- A list of pre-tested qualified manufacturers and products as they related to a specific military specification. A solicitation specifying a QPL restriction requires contractors to supply only the source and part number specified on the QPL list.
- Failure Rated QPL
 - Established Reliability product with a verified Failure Rate that has been qualified to a military specification.
- Non-Failure Rated QPL
 - Product without a verified Failure Rate that has been qualified to a military specification or drawing.

Single Lot Traceability

- Items provided in accordance with this purchase order clause requires each shipment (i) be from only one OEM; (ii) be from one Manufacturing Lot; (iii) components that are too small to have the Lot Code marked on them are to have their packaging identified with the appropriate Lot Code marking / serial number. Also known as Single Lot Date Code (SLDC) and Date Code (DC).
