

STC800 Solar Cell for WMR200 / WMR80

Product Code STC800

Additional Solar Cell to extend the life of your batteries perfect for use with sensors in hard to access locations.

WMR200 Weather Station users.

An additional solar cell for WMR200 sensors. Perfect for those who wish to place their temperature and humidity sensor in a different location to their wind vane.

WMR80 Weather Station users.

Perfect add on to the WMR80 to power the wind vane, no more changing batteries. Though please note if you wish to also solar power the temperature and humidity you will also require a THGN801 sensor.

Please note: It is highly recommended that you still install batteries into the sensors to provide power in overcast days. The solar panel is designed to extend the life of batteries. This is a spare part and not sold in retail packaging
