

Loctite Double Bubble Epoxy

June 2018

2139022	Loctite EA Double Bubble	5 x 3g	Blister
2015058	Loctite EA Double Bubble	50 x 3g	Box

Recent batches of Loctite Double Bubble cure to a distinct yellow colour instead of the normal cloudy/white colour. This is due to variances (within manufacturing tolerance) of a raw material. The viscosity, cure speed and final cured properties of these batches of Double Bubble have been measured and are not affected.

The colour change is purely aesthetic. If a clear cured adhesive is required then Loctite 3430 could be considered as an alternative.
