# PLIERS

A firm grip on everything: you have to be able to rely on pliers. They should grip securely, easy to use, last as long as possible and not damage the workpiece. The functionality, quality and user-friendliness of a pair of pliers are determined not only by the design, but above all by the manufacturing process.

GEDORE pliers blanks are forged in our own factories and manufactured at GEDORE Austria - the competence centre for pliers. The current range extends from the smallest telephone pliers to the largest pipe wrenches, and reaching for GEDORE pliers is guaranteed to pay off.

High cutting performance, extreme flexural strength and reliable surface protection are the results of many years of forging expertise and processes such as oil hardening and inductive post-hardening.

In the application, the interplay of perfect cutting edge geometry, optimised joints and ergonomic handles make all the difference. The GEDORE power pliers range is outstanding in every respect: maximum power transmission with minimum effort.

## POWER PLIERS - GEDORE POWER PLIERS

- Inlaid joint for optimum power transmission
- Maximisation of the leverage due to shifting of the pivot point
- 35% less force required with higher cutting and clamping performance

**STRONG  
POWERFUL**

#### THE FULL PROGRAMME

- Extremely wide range of pliers for specialists and generalists
- For wire classes from soft and medium-hard to hard and piano wire
- Available individually or in practical set

#### TONG GRIPS

- Dipped grip protection for improved feel and reduced risk of slipping
- 2-component grip guards for additional comfort and safety

#### TONG JOINTS

- Firm connection of the tong legs with a groove in the mounted joint
- Connection and adjustment device in one for pliers with through joint
- Optimum transmission of force with inserted joint

# i ANGLED COMBINATION PLIERS

1

A pliers head angled at 60° goes easy on your joints and tendons. And you keep the workpiece in view at the same time

2

Specially offset teeth in the grip surfaces for best-possible gripping on pipes and screws

## TRADITIONAL COMBINATION PLIERS

Traditional gripping faces with standard gripping on pipes and screws

**8248**  
Angled combination pliers

- > One 60° angled pliers head
- > Specially offset teeth in the grip surfaces for best-possible grip on pipes and screws
- > Perfect ergonomics optimises hand force, forced hand position is avoided
- > Induction-hardened precision cutting edges, hardness 61 - 63 HRC
- > TL = steel-grey, with blue dipped non-slip handles

# i POWER COMBINATION PLIERS

Power pliers: The effort required in using them is down 35 % on account of the pivot transferred to the front and the resulting lengthened lever.

MOMENT EQUATION

1

Gripping surface with file-cut for a particularly effective hold

2

Roughly toothed gripping surfaces for securely holding screws, pipes etc.

3

Maximum cutting performance yet with a low level of effort expended thanks to an optimum interaction of cutting geometry, eccentric rivet bearing and ergonomic handle design.

4

Inductively hardened cutting edges (62 - 64 HRC) ensure constant cutting power over a long time span.

5

High-grade 2-component handles with finger protection enable work to be done ergonomically and to the exclusion of tiredness

Pliers

**8250**

# i SAFE CUT

## WIRE ROPE CUTTER

- Shearing cut - the cutting plates slide past each other and in this way dissect the material.
- The wire rope is cleanly cut and retains its circular crosssection. It does not fan out.

## BOLT CUTTER

- Notch cut; the cutters press into the material and create a notch. The material is compacted and thus separated.
- The wire rope is compressed and thus loses its circular crosssection at the cut. The wire rope fans out as a result.

## SPLICING

The old seafaring ability to separate the rope into its individual strands so as to then braid them into a loop or lengthen the rope with another rope without knotting.

## FANNING OUT

Fanning out - that is separating off into individual strands - is not wanted when cutting wire ropes. It is a very laborious business to splice wire ropes. That is why more up-to-date ways are available to incorporate loops in wire ropes. However, they require a smooth cut without any spliced strands.

**8317**  
Bowden cable cutter/  
Wire rope cutter

- > Crimping of bowden-cable sleeves and end-sleeves 1.5 mm and 2 mm
- > For cutting wire rope up to 2 mm diameter and bowden-cable sleeves up to 5 mm diameter as well as for medium-hard wire

# **i** ELECTRONIC PLIERS

- For bending, straightening and assembly work in the electronic and precision mechanical sector
- GEDORE ESD-electronic-pliers dissipate electrostatic energy in a slow, controlled manner
- Surfaces: Ground-steel - no flaking chrome parts to cause faults in electronic circuitry

- 1** Precision-polished faces
- 2** Precision box joint, induction-hardened cutting edges
- 3** Welded-in double leaf spring cannot be lost, ensuring perfect functioning and a long service life
- 4** 2-component handles with thermoplastic inserts, slip-inhibiting comfort grip

# i CIRCLIP PLIERS

Available with blue dipped handle protection from 2021! Please contact us.

## 1

- Flattened tip mounting makes it easier to get at the safety ring eyelets
- Secure tip thanks to keyed press-fixing in the pliers head
- With no retaining groove in the tips, the safety ring cannot be inadvertently bent and it remains absolutely flat. In addition no weakening of the tips from a retaining groove (notching-induced rated breaking point).
- Large contact surface for the safety ring stops it becoming twisted

## 2

Precision, screwed joint. The screw ensures ease in re-adjusting the pliers legs.

## 3

Contoured anti-slip handles stop your hands from slipping

## 4

Wear-resistant and accurate! - The hardened and specially inserted tip is of high-grade roller bearing steel and absolutely cylindrical.

## 5

A secure internal spring makes work easier with circlip pliers

### 8000 AE 0 - AE 4

Circlip pliers for external retaining rings Form A

# i CIRCLIP PLIERS FOR INTERNAL RETAINING RINGS

1

3.2/3.5/4.5 mm tip diameters available for 85 to 400 mm rings. Models for internal and external retaining rings

2

Release lever for controlled slackening of the tension

3

Ratcheting mechanism for easing the work of the user when fitting the retaining rings

- Straight tips
- Black, tips and lock lever zinc-plated
- The toothed bracket stops the pliers legs from straddling beyond the permitted working area
- This ensures safe working even in hidden fitting positions

- Locking pin can be replaced
- Non-crush type release-lever with handle recesses, blue dip-insulated
- Precision machined, oil hardened and annealed
- E-8000 J = pair of spare tips

## 8000 J 4 - J 6

## i PLIERS FOR EXTERNAL RETAINING RINGS

**1**

For holes from 4.5 to 5.9 mm and rings from 305 to 500 mm

**2**

Paralleled jaws for the greatest possible safety and torsion-free clamping

**3**

Release lever for controlled slackening of the tension

**4**

Ratcheting mechanism for easing the work of the user when clamping the retaining rings

- For shafts
- Supplied with four different clamping tips
- The circlip is securely clamped before removal by choosing a suitable distance between the clamping tips.

This means that unnecessary plier movement is avoided, and the circlip may be opened completely. The special parallel movement of the clamping tips and their recesses in the direction of the pressure applied ensure that the circlip will be clamped firmly.

**8005 A**

Circlip pliers for external retaining rings

- > For shafts
- > Includes 4 different tips (detailed instructions are included with the pliers)
- > By using a suitably wide pairing of the pick-up tips, the ring is securely fixed before the actual tong stroke. This prevents unnecessary idle stroke and the ring can be opened completely.

- > The special parallel movement of the clamping tips and their recesses in the direction of the pressure applied ensure that the circlip will be clamped firmly

## i THE TOGGLE LEVER

### A giant among the joints

- Similar in construction to the human leg and consisting of hip, knee and ankle joints
- The knee joint's intelligent power management is its unbeatable advantage:
- Clever utilization of the physical lever laws \*)
- Rapid and powerful even with a reduced operating force
- Ideal for optimum pressure and clamping operations
- Maximum pressing/clamping force with knee lever extended – even with automatic locking effect i.e. self-clamping effect (e.g. with grip pliers) relieved by operating the releasing lever
- Constant high quality of work

\*) Considerable paths are rapidly bridged involving little hand power. Just before "stretching", a short path is covered with an exceptional lever force. That is why it is used everywhere where considerable paths need to be initially covered without any noticeable force used and where the real "work" needs to be done over the last few millimetres. This is the case, for instance, with bolt cutters and crimping/grip pliers.

Self-clamping effect – can only be cancelled by operating the releasing lever!

## 137

Grip wrench

- > With adjusting screw and release lever, model 137 KR-10 with blue dip-insulated lever
- > Automatically welded upper jaw - absolutely firm connection with the steel sheet body
- > Sophisticated jaw shape guarantees three-point support for any material cross section
- > No widening under most extreme loading
- > Release lever under constant pressure of special spring

Code	No.	◀ mm ▶	◀ inch ▶	mm	inch

6406890	137 12	300	12"	45	1.3/4	1,042

# i GRIP WRENCH

The difference comes from the special profile and shape.

Positive fit joint to the screw/nut is down to the special design of the plier jaw\*

A lack of force causes force-locking joints to suddenly fail. Accident risk!

\* Positive fit joints are not suddenly released. They need, in fact, to change their geometric form; a visible change in form quasi announces their failure.

The upper jaw section covers more than half of the screw head/ nut. This produces a positive fit between grip wrench and screw/ nut.

The lower half of the jaw simply affords protection from any slipping from the screw/nut. The actual torque is transferred in the upper, positive locking zone.

CENTRAL HEXAGONAL PITCH

# i ECK-SCHWEDE-SNAP® - THE SWEDISH

Tried and tested bestseller with a powerful grip for more than 50 years

1

The special, supplementary flame hardening of the teeth increases and improves the grip and durability of the snap®

2

Force is always applied by snap® simultaneously at three points, ensuring a secure grip with low hand pressure

3

Hook and leg made from drop-forged GEDORE special chrome-vanadium steel, hardened and tempered

4

The mouth of the jaw opening is always narrower than the pipe diameter, reliably preventing the workpiece from slipping out. Securely grips pipes and screw couplings

5

Stove enamelling guarantees long-life protection

## WORKING PRINCIPLE

- The jaw form of the snap® reliably prevents the workpiece slipping out, and ensures maximum freedom of movement in confined spaces
- The curvature of the jaws adapts ideally to different profiles, enabling the snap® to grip hexagonal nuts - gently and securely

## 100

Elbow pipe wrench  
ECK-SCHWEDE-snap® -

# i BOLT CUTTERS

## 8340

- With a cut soft, medium-hard or hard wires up to 4 mm Ø are separated
- The gliding ahead of the cutting material is prevented by two one-sided micro-grooves and thus is always stays in optimal cutting position

## 8340

- With two cuts soft, medium-hard or hard wires from 4 to 6 mm Ø are separated
- The extra cutting edge (1) serves as first cut for thick bolts and engraves them deeply
- In the second step, the main cutting edge (2) cuts through the bolt completely

- Compact power bolt cutter with a particularly effective cutting performance
- Optimum lever action requires less effort
- Wear-free rotating/thrust block bolt to reduce sliding friction when cutting
- Force optimised, joint-near cutting is guaranteed

- The effective force multiplication ratio of 1:30 results of the joint-near use of the cutting edge
- Here the lever ratio of hand to cutting force is optimal
- A gliding ahead from this cutting position is prevented by the micro-grooves resp. the additional cutting edge

## 8340 Bolt cutter

- > Cutting edges additionally inductively hardened (63 - 65 HRC)
- > The gliding ahead of the cutting material is prevented by two one-sided micro-grooves and thus is always stays in optimal cutting position
- > Precision cutting edges for soft wire up to Ø 6.0 mm, hard and piano wire up to Ø 3.8 mm
