VdS Outdoor Housing Profiline

The VdS outdoor housing Profiline is the very first VdS certified protective housing. It does not only provide secure mounting, but also protects your camera against wind and rain. A 230 VAC heating unit with thermostat is integrated in the weather-proof housing. Thanks to the heating system, the window of the protective housing cannot fog up and condensation water is prevented. The result: Clear images even in capricious weather. The housing is dust-proof and protected against spraying water (IP67). You can mount it outdoors without hesitation.

If you expect intensive solar radiation, we recommend the Outdoor Housing with fan (TV8495).

Product highlights:

- Protection class IP67
- Inner cable duct
- Heating system included
- Recommended for outdoor use
- VdS certified
