X20PD0012

1 General information

The potential distributor module provides 12x 24 VDC (from the internal I/O supply) on the terminal connections and opens up additional wiring possibilities for actuators and sensors. The module is equipped with a replaceable microfuse between the 24 VDC potential on the terminal block and the X20 system I/O supply. The function of the fuse is monitored.

- · Integrated exchangeable microfuse
- · Monitoring of the fuse
- · Potential for routing as needed

2 Order data

Model number	Short description	Figure
	Other functions	
X20PD0012	X20 potential distributor module, 12x 24 VDC, integrated micro- fuse	33
	Required accessories	
	Bus modules	8
X20BM11	X20 bus module, 24 VDC keyed, internal I/O supply continuous	
X20BM15	X20 bus module, with node number switch, 24 VDC keyed, internal I/O supply continuous	
	Terminal blocks	
X20TB12	X20 terminal block, 12-pin, 24 VDC keyed	

Table 1: X20PD0012 - Order data

3 Technical data

Model number	X20PD0012			
Short description	<u> </u>			
Potential distributor module	12x 24 VDC on the terminal connections			
General information	12X 24 VDO ON the terminal connections			
B&R ID code	0x267E			
Status indicators	Operating state, module status			
	Operating state, module status			
Diagnostics Madula run/arrar	Voc. using status LED and software			
Module run/error	Yes, using status LED and software			
Fuse monitoring	Yes, using status LED and software			
Power consumption 1)	0.40 W			
Bus Internal I/O	0.12 W			
Internal I/O	1 W			
Additional power dissipation caused by actuators (resistive) [W]	•			
Certifications				
CE	Yes			
KC	Yes			
EAC	Yes			
UL	CULus E115267			
	Industrial control equipment			
HazLoc	cCSAus 244665			
	Process control equipment			
	for hazardous locations			
	Class I, Division 2, Groups ABCD, T5			
ATEX	Zone 2, II 3G Ex nA nC IIA T5 Gc			
	IP20, Ta (see X20 user's manual) FTZÚ 09 ATEX 0083X			
DNV GL	Temperature: B (0 - 55°C)			
DIV GL	Humidity: B (up to 100%)			
	Vibration: B (4 g)			
	EMC: B (bridge and open deck)			
Output I/O power supply				
Nominal output voltage	24 VDC from the internal I/O supply			
Fuse	Integrated 6.3 A, slow-blow, can be replaced			
Behavior on short circuit	Integrated fuse			
Permissible contact load	10 A			
Operating conditions				
Mounting orientation				
Horizontal	Yes			
Vertical	Yes			
Installation elevation above sea level				
0 to 2000 m	No limitations			
>2000 m	Reduction of ambient temperature by 0.5°C per 100 m			
Degree of protection per EN 60529	IP20			
Ambient conditions				
Temperature				
Operation				
Horizontal mounting orientation	-25 to 60°C			
Vertical mounting orientation	-25 to 50°C			
Derating	-			
Storage	-40 to 85°C			
Transport	-40 to 85°C			
Relative humidity				
Operation	5 to 95%, non-condensing			
Storage	5 to 95%, non-condensing			
Transport	5 to 95%, non-condensing			
Mechanical properties	<u> </u>			
Note	Order 1x X20TB12 terminal block separately			
	Order 1x X20BM11 bus module separately			
	12.5 ^{+0.2} mm			

Table 2: X20PD0012 - Technical data

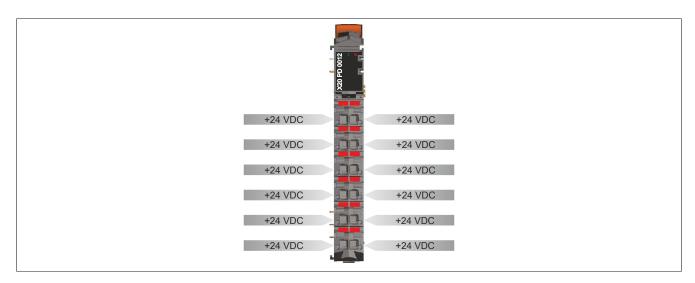

1) The specified values are maximum values. For examples of the exact calculation, see section "Mechanical and electrical configuration" of the X20 system user's manual.

4 LED status indicators

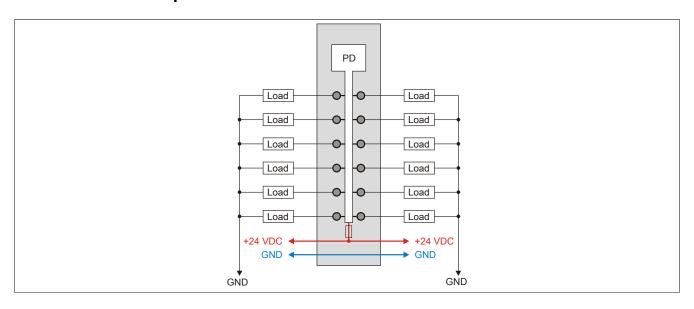

For a description of the various operating modes, see section "Additional information - Diagnostic LEDs" of the X20 system user's manual.

Figure	LED	Color	Status	Description	
	r	Green	Off	No power to module	
1			Single flash	RESET mode	
			Blinking	PREOPERATIONAL mode	
N .			On	RUN mode	
0012	е	Red	Off	No power to module or everything OK	
			On	Error or reset status	
2 5			Single flash	Fuse defective or missing	
X20	e + r	Red on / Green	single flash	e flash Invalid firmware	

5 Pinout

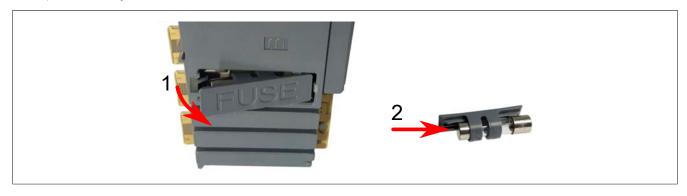

6 Connection example

7 Replacing the built-in fuse

The module is equipped with a 6.3 A built-in fuse. Proceed as follows to replace a defective fuse:

- 1) Remove the fuse cover with the fuse on the right side of the module using a screwdriver.
- 2) Slide the cylindrical fuse out of the fuse holder and slide the new fuse in.

8 Register description

8.1 General data points

In addition to the registers described in the register description, the module has additional general data points. These are not module-specific but contain general information such as serial number and hardware variant.

General data points are described in section "Additional information - General data points" of the X20 system user's manual.

8.2 Function model 1 - Standard

Register	Fixed offset	Name	Data type	Read		Write	
				Cyclic	Non-cyclic	Cyclic	Non-cyclic
0	1	Module status	USINT	•			
		StatusFuse	Bit 0				

Fixed modules require their data points to be in a specific order in the X2X frame. Cyclic access occurs according to a predefined offset, not based on the register address.

Non-cyclic access continues to be based on the register numbers.

8.3 Function model 254 - Bus controller

Register	Offset1)	Name	Data type	Read		Write	
				Cyclic	Non-cyclic	Cyclic	Non-cyclic
0	0	Module status	USINT	•			
		StatusFuse	Bit 0				

¹⁾ The offset specifies the position of the register within the CAN object.

8.3.1 Using the module on the bus controller

Function model 254 "Bus controller" is used by default only by non-configurable bus controllers. All other bus controllers can use additional registers and functions depending on the fieldbus used.

For detailed information, see section "Additional information - Using I/O modules on the bus controller" of the X20 user's manual (version 3.50 or later).

8.3.2 CAN I/O bus controller

The module occupies 1 digital logical slot on CAN I/O.

8.4 Module status

Name:

Module status

StatusFuse

This register can be used to read the status of the installed fuse.

Data type	Values
USINT	See the bit structure.

Bit structure:

Bit	Description	Value	Information
0	StatusFuse	0	Fuse OK
		1	Fuse not OK
1 - 7	Reserved	-	

8.5 Minimum cycle time

The minimum cycle time specifies the time up to which the bus cycle can be reduced without communication errors occurring. It is important to note that very fast cycles reduce the idle time available for handling monitoring, diagnostics and acyclic commands.

Minimum cycle time	
100 μs	

8.6 Minimum I/O update time

The minimum I/O update time specifies how far the bus cycle can be reduced so that an I/O update is performed in each cycle.

	Minimum I/O update time
Î	100 μs
