See General Information for Power Supplies Certified for Canada

GENERAL

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical business equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment Certified for Canada (NWQ7).

All power supply types covered under this category are marked with input and output electrical ratings that include the voltage and intended maximum load ratings in amperes.

When power supplies intended for use with a detachable power supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

REBUILT PRODUCTS

This category also covers Listed power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new products.

ADDITIONAL INFORMATION

For additional information, see Power Supplies Certified for Canada (QQAQ7) and Electrical Equipment for Use in Ordinary Locations Certified for Canada (AALZ7).

REQUIREMENTS

The basic standards currently used to investigate products in this category are CAN/CSA C22.2 No. 60950 or CAN/CSA C22.2 No. 60950-1, "Safety of Information Technology Equipment."

All low-voltage outputs (maximum 42.4 volts peak or 60 V dc) are safety extra low voltage (SELV) as defined in CAN/CSA C22.2 No. 60950 or CAN/CSA C22.2 No. 60950-1. An output marked "LPS" has been determined to have an output level at or below the limited power source level specified in the Standard, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to CAN/CSA C22.2 No. 223, "Power Supplies with Extra Low Voltage Class 2 Outputs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL Mark for Canada symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following category identifiers: "Information Technology Equipment Power Supply," "I.T.E. Power Supply" or "QQGQ7 Power Supply."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Guide Information for Electrical Equipment for Use in Ordinary Locations Certified for Canada

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the Canadian Electrical Code.

- General Purpose Power Supplies
- Specialty Power Supplies
- Information Technology Equipment Power Supplies
- Telephone Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.
