ESD Bench Matting – 2 & 3 Layer, Smooth Finish

ENGLISH

FEATURES:

Anti-static matting should be laid out in the workshops or advanced laboratories for microelectronic industries such as electronic semi-conduct devices, electronic computers, electronic communication equipment and integrated circuits etc.

- Great value ESD Bench Matting made from anti-static (conductive) and static-dissipative materials with synthetic rubber
- All bench mats come with 10mm studs in each corner

2 LAYER

- 2mm thick double-layer structure
- Surface layer is a 0.5mm thick static-dissipative layer
- Bottom layer is a 1.5mm conductive layer
- Asian origin

3 LAYER

- 3mm thick double-layer structure
- Surface layer is a 1.25mm thick static-dissipative layer
- Middle layer is a 0.5mm conductive layer
- Bottom layer is a 1.25mm thick static-dissipative layer

2 LAYER CONSTRUCTION:

3 LAYER CONSTRUCTION:

CONFORMS TO ESD S20.20 AND EN 61340-5-1 ESD.

R_{TG} is the resistance from one point on the mat's surface to the mat's ground point, and is the fundamental electrical test for a mat. A proper R_{TG} insures that a mat can conduct charge from a point on the surface to the mat ground point. The guideline in ESD STM-4.1 for R_{TG} is 1×10^6 to $1 \times 10^9 \Omega$. ANSI/ESD S-20.20 has an upper limit of $< 1 \times 10^9 \Omega$. R_{TT} is the resistance from one point on the mat's surface to another point. A proper R_{TT} insures the consistency of the mat's resistance properties. The ESD STM-4.1 guideline for R_{TT} is $> 1 \times 10^6 \Omega$.
