

Cool MOS™ Power Transistor

Feature

- New revolutionary high voltage technology
- Ultra low gate charge
- Periodic avalanche rated
- Extreme dv/dt rated
- Ultra low effective capacitances
- Improved transconductance
- PG-TO-220-3-31;-3-111: Fully isolated package (2500 VAC; 1 minute)
- Pb-free lead plating; RoHS compliant
- Qualified according to JEDEC⁰⁾ for target applications

19 Typ. C_{oss} stored energy

$$E_{oss}=f(V_{DS})$$

Figure 1 is a graph showing the variation of the current i and the voltage V over time t . The current i (solid line) starts at a constant value l_F , then decreases linearly to a minimum value l_{rrm} , and finally increases back to l_F . The voltage V (dashed line) starts at a constant value V_R , then decreases linearly to a minimum value, and finally increases back to V_R . The graph is divided into three regions: a constant current region (l_F), a linear decrease region (l_{rrm}), and a linear increase region (l_F). The time intervals are labeled t_s , t_{rr} , and t_F . The current levels are labeled $10\% l_{rrm}$ and $90\% l_{rrm}$. The voltage levels are labeled V_R and V_F . The equations $t_{rr} = t_s + t_F$ and $Q_{rr} = Q_s + Q_F$ are shown.
