

Evaluation Board for a 20-Bit, Serial Input, Voltage Output DAC

FEATURES

Full-featured evaluation board for the AD5791

Link options

PC control in conjunction with Analog Devices, Inc., system development platform

PC software for control

GENERAL DESCRIPTION

The EVAL-AD5791 is a full-featured evaluation board, designed to allow the user to easily evaluate all features of the [AD5791](#) voltage output, 20-bit DAC. The AD5791 pins are accessible at on-board connectors for external connection. The board can be controlled by two means, via the on-board connector (J6) or via the system development platform connector (J3). The SDP board allows the evaluation board to be controlled through the USB port of a Windows® XP (SP2 or later) or Vista (32-bit) based PC using the AD5791 evaluation software.

DEVICE DESCRIPTION

The AD5791 is a high precision, 20-bit digital-to-analog converter (DAC), designed to meet the requirements of precision control applications. The output range of the AD5791 is configured by two reference voltage inputs. The device is specified to operate with a dual power supply of up to 33 V.

Complete specifications for the AD5791 are available in the AD5791 data sheet available from Analog Devices and should be consulted in conjunction with this user guide when using the evaluation board.

REVISION HISTORY

8/10—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The following external supplies must be provided:

- 5 V between the V_{CC} and DGND inputs for the digital supply of the AD5791. Alternatively, place Link 1 in Position A to power the digital circuitry from the USB port (default).
- 7.5 V to 16.5 V between the V_{DD} and AGND inputs for the positive analog supply of the AD5791.
- -2.5 V to -16.5 V between the V_{SS} and AGND inputs for the negative analog supply of the AD5791.

The analog and digital planes are connected at one location, close to the AD5791. To avoid ground loop problems, it is recommended not to connect AGND and DGND elsewhere in the system.

Each supply is decoupled to the relevant ground plane with 10 μ F and 0.1 μ F capacitors. To the relevant ground plane, each device supply pin is again decoupled with a 10 μ F and 0.1 μ F capacitor pair.

LINK OPTIONS

The link options on the evaluation board should be set for the required operating setup before using the board. The functions of the link options are described in Table 5.

Default Link Option Setup

The default link options are listed in Table 1.

Table 1. Default Link Options

Link No.	Option
LK1	A
LK3	A
LK4	Removed
LK5	Removed
LK6	Removed
LK8	A
LK9	C

Connector J6 Pin Descriptions

Table 2. Connector J6 Pin Configuration

2	4	6	8	10
1	3	5	7	9

Table 3. Connector J6 Pin Descriptions

Pin No.	Description
1	SDO
2	RESET
3	DGND
4	CLR
5	IOVCC
6	LDAC
7	SDIN
8	DGND
9	SCLK
10	SYN \bar{C}

ON-BOARD CONNECTORS

There are 9 connectors on the AD5791 evaluation board PCB as outlined in Table 4.

Table 4. On-Board Connectors

Connector	Function
J1	Analog power supply connector
J2	Digital power supply connector
J3	SDP board connector
J6	Digital interface pin header connector
VOUT	DAC output connector
VOUT_BUF	Buffered DAC output connector
VREF	5 V voltage reference input connector (+10 V and -10 V reference voltages are generated from 5 V input)
VREFN	DAC negative reference input connector
VREFP	DAC positive reference input connector

Table 5. Link Options

Link No.	Description
LK1	This link selects the source of the digital power supply. Position A selects the source from the SDP board. Position B selects the source from Connector J2.
LK3	This link selects the voltage source for the IOV _{CC} pin. Position A connects IOV _{CC} to V _{CC} . Position B selects an externally applied voltage at Pin 5 of J6.
LK4	This link selects the state of the LDAC pin. When this link is inserted, LDAC is at logic low. When this link is removed, LDAC is at logic high.
LK5	This link selects the state of the CLR pin. When this link is inserted, CLR is at logic low. When this link is removed, CLR is at logic high.
LK6	This link selects the state of the RESET pin. When this link is inserted, RESET is at logic low. When this link is removed, RESET is at logic high.
LK8	This link selects the positive reference source. Position A selects an on-board generated 10 V, derived from 5 V applied at Connector VREF. Position B selects an external voltage applied at Connector VREFP.
LK9	This link selects the negative reference source. Position A selects an external voltage applied at Connector VREFN. Position B selects AGND. Position C selects an on-board generated -10 V, derived from 5 V applied at Connector VREF.

EVALUATION BOARD SOFTWARE

SOFTWARE INSTALLATION

The **AD5791** evaluation kit includes self-installing software on a CD. The software is compatible with Windows XP (SP2) and Vista (32-bit). If the setup file does not run automatically, you can run **setup.exe** from the CD.

Install the evaluation software before connecting the evaluation board and SDP board to the USB port of the PC to ensure that the evaluation system is correctly recognized when connected to the PC.

1. After installation from the CD is complete, power up the AD5791 evaluation board as described in the Power Supplies section. Connect the SDP board to the AD5791 evaluation board and then to the USB port of your PC using the supplied cable.
2. When the evaluation system is detected, proceed through any dialog boxes that appear. This completes the installation.

SOFTWARE OPERATION

To launch the software, complete the following steps:

1. From the **Start** menu, select **Analog Devices – AD5791 > AD5791 Evaluation Software**. The main window of the software is displayed (see Figure 3).
2. If the evaluation system is not connected to the USB port when the software is launched, a connectivity error is displayed (see Figure 2). Connect the evaluation board to the USB port of the PC, wait a number of seconds, and click **Rescan**. Follow the instructions.

Figure 2. Connectivity Error Alert

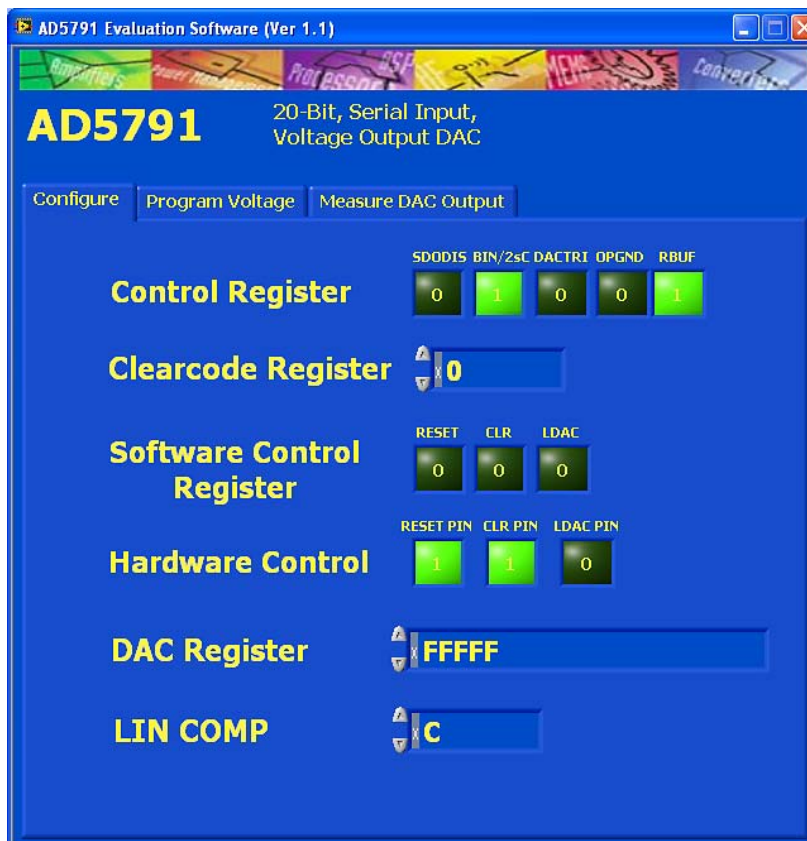

Figure 3. Main Window

MAIN WINDOW

The main window is divided into three tabs: **Configure**, **Program Voltage**, and **Measure DAC Output**.

Configure

The **Configure** section allows access to the control register, clearcode register, software control register, and DAC register, and also allows control of the **RESET**, **CLR**, and **LDAC** pins as shown in Figure 3.

Program Voltage

The **Program Voltage** section programs the DAC register with a value calculated from the three entered values: the positive voltage reference (VREFP), the negative voltage reference (VREFN), and the desired output voltage as shown in Figure 4.

Figure 4. Program Voltage Window

Measure DAC Output

The **Measure DAC Output** section allows the PC to control an Agilent 3458A multimeter to measure and log the DAC output voltage.

The multimeter is controlled over a general-purpose interface bus (GPIB). Once connected to the PC, the multimeter should first be configured via its front panel before taking a measurement. Figure 6 shows the measurement options. The software runs through a sequence of steps, programming the DAC register and measuring the DAC output voltage. The sequence begins with the software programming the DAC with the **Start Code** value, incrementing the programmed value at each step by the **Code Step** value, and finishing when the programmed value reaches the **Stop Code** value. A delay between measurements can be inserted if required. The GPIB address of the multimeter must be specified.

To begin the measurement, click the **START** button. The measurement can be halted at anytime by clicking the **STOP** button. When the measurement is completed, a dialog box appears to allow the data to be saved as a spreadsheet file with three columns of data. The first column is DAC code, the second column is DAC voltage in volts, and the third column is INL error in LSBs, as shown in Figure 5. A graph of both DAC output voltage vs. DAC code and INL error vs. DAC code is displayed on screen. In the measurement example shown in Figure 6, measurements are taken in 1024 code steps beginning at Code 0 and finishing at Code 1,047,552, in total 1023 measurements. With the number of power line cycles (NPLC) setting on the multimeter set to 1, the measurement takes ~75 sec to complete. To complete an all codes measurement requiring 1,048,576 measurement points takes ~21 hours to complete.

	13312	-9.74628	-0.03458

Figure 5. Saved Data Format

If an Agilent 3458A multimeter is not connected to the PC, the software steps through the codes without taking any measurements.

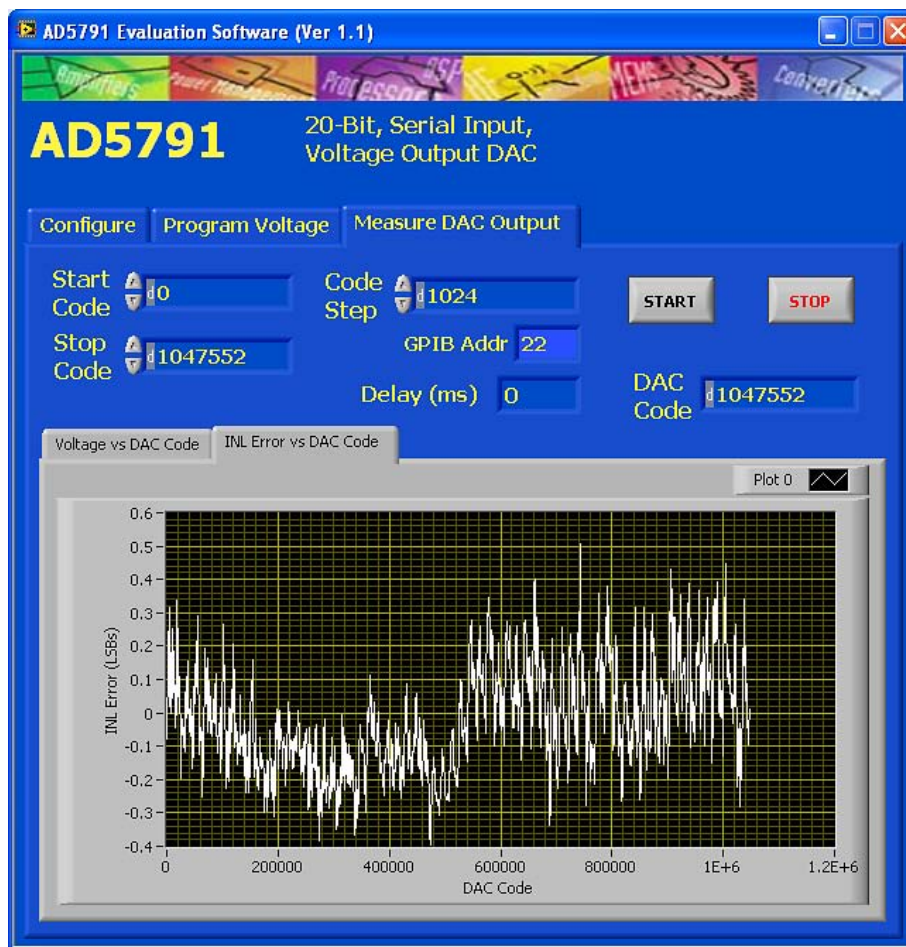

Figure 6. Measure DAC Output Window

EVALUATION BOARD PERFORMANCE

The following data demonstrates the measured linearity performance of the AD5791 evaluation board circuit. The board is powered from $V_{DD} = +15\text{ V}$, $V_{SS} = -15\text{ V}$, and $V_{REF} = +5\text{ V}$.

NOTES

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
