## Soldering Conditions

### Example of Reflow Soldering Condition

- Heating method: Double heating method with infrared heater.
- Temperature measurement: Thermocouple 0.1 to 0.2  $\phi$  CA (K) or CC (T) at soldering portion (copper foil surface). A heat resisting tape should be used for fixed measurement.
- Temperature profile

Series(Reflow type)	A (°C) 3s max.	B (°C)	C (°C)	D (°C)	E (s)	F (s)	G (s)
EC11J	260	230	180	150	120	—	240

### Notes

- The condition mentioned above is the temperature on the mounting surface of a PC board. There are cases where the PC board's temperature greatly differs from that of the switch, depending on the PC board's material, size, thickness, etc. The above-stated conditions shall also apply to switch surface temperatures.
- Soldering conditions differ depending on reflow soldering machines. You are requested to verify the soldering conditions thoroughly beforehand.
