Demanding applications and environments require special solutions

Applications in industries like food and beverage, pharmaceutical, chemical and hydrocarbon processing or medical require components that can provide high operational reliability and long service life.

SKF stainless steel deep groove ball bearings are manufactured to both withstand tough application requirements and to be the first choice when moisture, corrosive or abrasive materials are present.

SKF offers an expanded assortment of stainless steel deep groove ball bearings in both metric and imperial sizes. A wide variety of diameters and types can be supplied through SKF's logistics network. Beside the standard range, SKF also offers two specific product assortments for the food and beverage industry: Stainless steel deep groove ball bearings with food compatible grease as well as the dedicated product line, SKF Food line stainless steel deep groove ball bearings with:

- seals made from synthetic rubber, colored blue for optical detectability should any fragments enter the food stream, and in line with the respective US Food and Drug Administration (FDA) recommendations¹⁾.
- high quality grease, suitable for typical food and beverage application conditions registered by NSF as category H1²⁾.

SKF stainless steel deep groove ball bearing

1) FDA (21 CFR section 177.2600 "Rubber articles intended for repeated use" in food manufacture, preparation and transportation including aqueous and fatty foods).

2) Lubricant registered by NSF as category H1 (lubricant acceptable with incidental food contact for use in and around food processing areas). The NSF registration confirms it fulfills the requirements listed in the US Food and Drug Administration's guidelines under 21 CFR section 178.35070.

SKF stainless steel bearings for increased reliability

SKF stainless steel deep groove ball bearings (**fig. 1**) are corrosion resistant when exposed to moisture and several other media. They can accommodate radial loads and axial loads acting in both directions. SKF stainless steel deep groove ball bearings have a lower load carrying capacity than same-sized bearings made of high chromium steel.

The bearings are available open or capped (with seals or shields) and with or without a flange. Open bearings that are also available capped may have recesses in both the inner and outer rings or only in the outer ring (**fig. 2**).

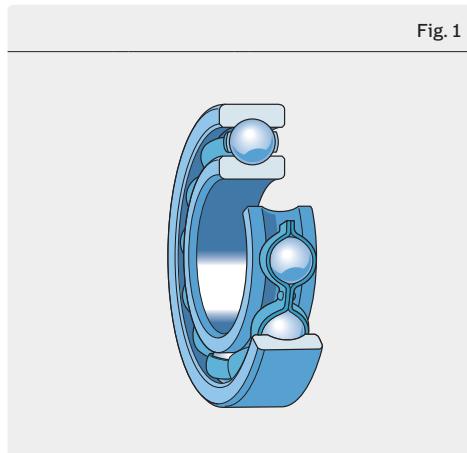

Fig. 1

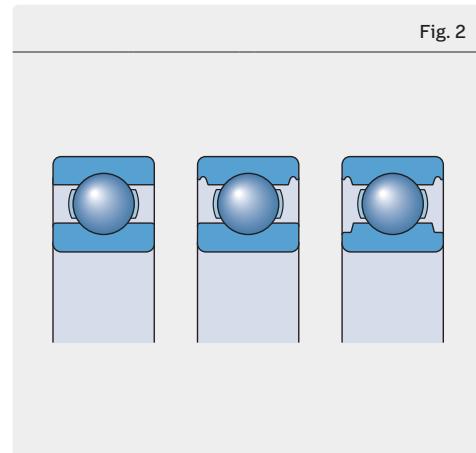

Fig. 2

Benefits

The main benefit of SKF stainless steel deep groove ball bearings is their improved resistance to corrosion in moist and other corrosive environments.

They are also very versatile since the sealed versions can be supplied with different greases as well as seals from different materials. This allows the choice of the most suitable grease for each application, for example, the use of food compatible, non-toxic bearing grease for the food industry. SKF stainless steel deep groove ball bearings are dimensionally stable up to at least 120 °C (250 °F).

Applications

SKF stainless steel deep groove ball bearings are recommended for use wherever resistance to corrosion is desired. Typical industries include:

- Food and beverage
- Pharmaceutical
- Chemical and hydrocarbon processing
- Medical
- Printing
- Engines and pumps
- Paper
- Offshore

Industry focus: Food and beverage

Food and beverage industry regulation is placing ever greater demands on safe food production. Food grade and optically detectable components are some of the supporting developments being applied to bearings to meet HACCP and other food safety management systems and regulation requirements.

Recalls are often being initiated because of very small parts of metal or plastic in food.

When machine components directly contact foodstuffs, there is a risk that the lubricant will contaminate the product. To avoid this, food safety management systems and regulations¹⁾ require the use of certified food grade lubricants.

Taking that recommendation one step further, the developing industry trend is to use food grade lubricants plant-wide. This avoids the possibility that a non-food grade lubricant is mistakenly applied to a critical position.

To prevent bacterial growth, machinery is often exposed to frequent washdowns with caustic antibacterial cleansing agents, that can drastically increase the risk of corroding standard bearings, leading to costly unplanned stops.

New food industry compliant bearings

In order to comply with food safety requirements, the SKF Food line stainless steel deep groove ball bearing (suffix VP311) offers as a reliable solution, that meets the industry needs and requirements:

- High quality grease, suitable for typical food and beverage application conditions registered as NSF H1 (**Note 2, page 6**)
- The blue seals material for optical detection in case of seal material entering the food stream, in line with the resepective US Food and Drug Administration (FDA) recommendations (**Note 1, page 6**).

Manufactured from stainless steel, the SKF deep groove ball bearings offer high corrosion resistance for virtually all food and beverage environments.

Compliance to food safety requirements makes the SKF Food line stainless steel deep groove ball bearings an ideal solution for virtually all applications in food and beverage processes.

Food grade grease filled bearings

In addition to this dedicated Food line, SKF can still offer stainless steel deep groove ball bearings with food grade grease registered as NSF H1. Bearings with this special grease come with a standard black nitrile seal.

1) Food safety management systems and regulations: HACCP, GMPS and ISO22000

Challenging process environments and hygienic washdowns require corrosion resistant bearing components to keep assets reliable and HACCP compliant.

The SKF Food line family

At SKF, we have developed a range of bearings that comply with industry standards and use food grade grease and optically detectable food grade sealing.

Deep groove ball bearing with variable percentages of grease fill as an option (suffix VA947)

Non-corrosive environments for all load conditions

Stainless steel deep groove ball bearing with variable percentages of grease fill as an option (suffix VP311)

Corrosive environments

MRC Ultra corrosion resistant sealed deep groove ball bearing (HNCR)

Harsh and extreme conditions

With Solid Oil* lubrication technology (suffix W64F)

*Solid Oil

Consider using a food grade Solid Oil fill in all instances where extended life is required or in harsh environments. Solid Oil is a polymer matrix saturated with a lubrication oil that completely fills the internal space in a bearing and encapsulates the cage and rolling elements. The Solid Oil matrix contains 2-4 times more lubricating oil than a corresponding sealed, grease-filled bearing, thus providing extended life.

Bearing data – designs

SKF stainless steel deep groove ball bearings are available for shaft diameters from 0.6 to 50 mm. Other sizes may also be available, please contact the SKF application engineering service. Also, a range of inch series bearings is available.

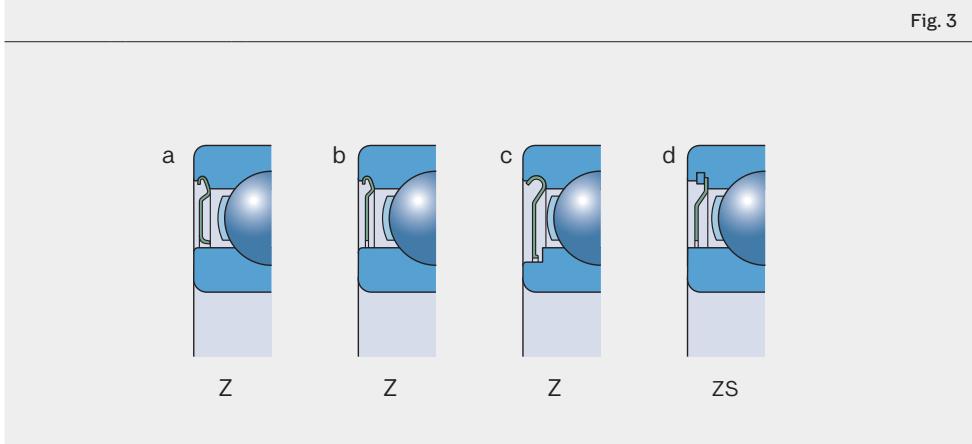

Sealing solutions

Shields

Shields identified by the designation suffix Z typically have an extension in the shield bore to form a long, narrow gap with the land of the inner ring shoulder. Bearings fitted with shields are primarily intended for applications where the inner ring rotates and both high temperatures and high speeds apply (**fig. 3a**). A grease other than that provided may be needed. Some shields do not have the extension (**fig. 3b**). The bore of a Z shield on some stainless steel bearings can extend into a recess on the inner ring (**fig. 3c**). Shields identified by the designation suffix ZS are fixed in the outer ring by a retaining ring (**fig. 3d**) and may extend into a recess on the inner ring. For stainless steel bearings, shields made of polytetrafluoroethylene (PTFE) may be available. For additional information, contact the SKF application engineering service.

Contact seals

Contact seals, which are fitted in a recess on the outer ring, make good, positive contact with the recess, without deforming the outer ring. These seals are made of an oil and wear resistant acrylonitrile-butadiene rubber (NBR) and are reinforced with a sheet steel insert. SKF stainless steel bearings are equipped with RS1 seals to design (a) or (b) (**fig. 4**). The exact seal design may differ from the illustrations.

Non-contact seals

Some sizes of SKF stainless steel deep groove ball bearings with non-contact seals are available on request. Low-friction seals, made of polytetrafluoroethylene (PTFE), are also available for some sizes.

Other seal types or materials may also be available, please contact the SKF application engineering service.

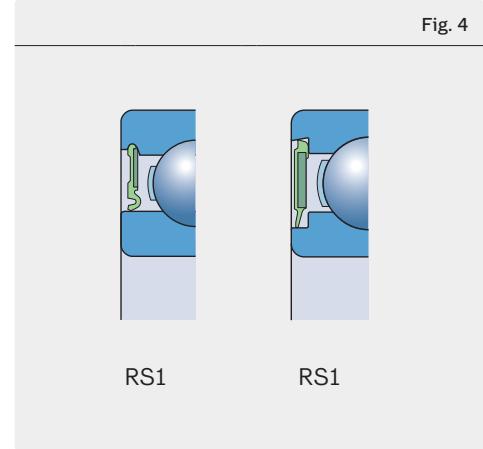

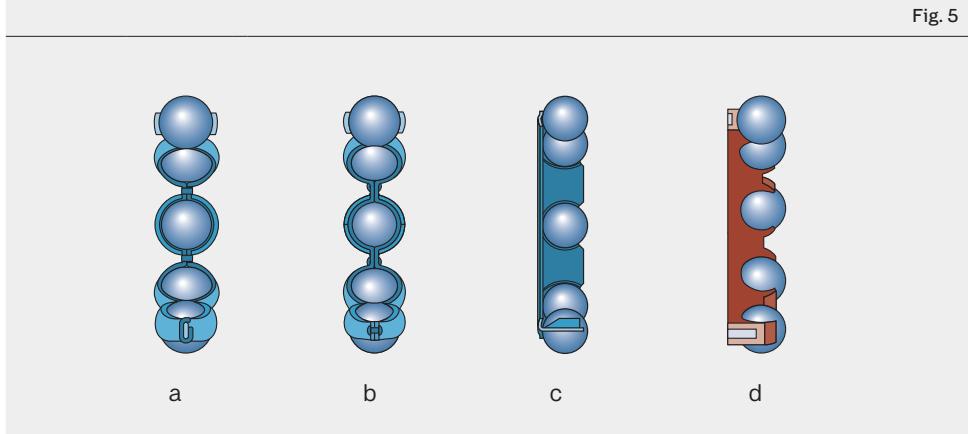

Fig. 5

Cages

The bearings are equipped with a stamped stainless steel cage as standard. The following standard cage types can be supplied:

- Ribbon type, ball centred (fig. 5a)
- Riveted, ball centred (fig. 5b)
- Snap type, ball centred (fig. 5c)

Injection moulded, ball centred (fig. 5d) polymer cages made of fibre reinforced polyamide 66 may also be available. For additional information about these cages, contact the SKF engineering service.

Grease

Standard SKF capped stainless steel deep groove ball bearings are filled with LHT23 under clean conditions. The bearings are considered maintenance-free for the life of the bearing. Details of this grease can be found in **table 1**. Other lubricating greases can be supplied on request.

Materials

The rings, balls, cages and shields of SKF stainless steel bearings are all made from stainless steel. The bearing rings are produced from X65Cr13 according to ISO 683-17:2000. The balls are made from X105CrMo17 while the shields and cages are made from X5CrNi18-10 in accordance with EN 10088-1:1995.

Table 1

Bearing data – general

Dimensions

The boundary dimensions of metric stainless steel deep groove ball bearings conform to ISO 15-1998, except for bearings with a WBB1 prefix or an X suffix. Inch series stainless steel deep groove ball bearings conform to ANSI/AFBMA Std. 12.2-1992.

Tolerances

All stainless steel deep groove ball bearings are manufactured as standard to Normal tolerances corresponding to ISO 492-2002.

Internal clearance

SKF stainless steel deep groove ball bearings are manufactured as standard with Normal radial internal clearance to ISO 5753-1991, except for bore diameters < 10 mm (**table 2**). Other classes are available upon request. The values for radial internal clearance given in **table 2** are valid for unmounted bearings under zero measuring load.

Misalignment

SKF stainless steel deep groove ball bearings have only a limited ability to accommodate misalignment. The permissible angular misalignment between inner and outer rings which will not produce inadmissibly high additional stresses in the bearing depends on the radial internal clearance of the bearing in operation, bearing size, the internal design and the forces and moments acting on the bearing. In other words, depending on the various influencing factors, the permissible angular misalignment lies between 2 and 10 minutes of arc. Any misalignment will increase bearing noise and reduce bearing service life. For additional information, contact the SKF application engineering service.

Radial internal clearance										Table 2
Bore diameter d over mm	incl. °	Radial internal clearance								
		C2 min	C2 max	Normal min	Normal max	C3 min	C3 max	C4 min	C4 max

65	80	1	15	10	30	25	51	46	71	

Minimum load

For satisfactory operation, SKF stainless steel deep groove ball bearings must always be subjected to a given minimum load.

The requisite minimum radial load to be applied to SKF stainless steel deep groove ball bearings can be estimated using

$$F_{rm} = k_r \left(\frac{v n}{1000} \right)^{2/3} \left(\frac{d_m}{100} \right)^2$$

where

F_{rm} = minimum radial load [kN]

k_r = minimum load factor

v = oil viscosity at operating temperature [mm^2/s]

n = rotational speed [r/min]

d_m = bearing mean diameter

= $0.5(d + D)$ [mm]

When starting up at low temperatures or when the lubricant is highly viscous, even greater minimum loads may be required. The weight of the components supported by the bearing, together with external forces, generally exceeds the requisite minimum load. If this is not the case, the bearing must be subjected to an additional radial load. For applications where stainless steel deep groove ball bearings are

used, an axial preload can be applied by adjusting the inner and outer rings against each other or by using springs.

Axial load carrying capacity

SKF stainless steel deep groove ball bearings have the same axial load carrying capacity as standard SKF deep groove ball bearings. If they are subjected to purely axial loads, this load should generally not exceed the value of $0.25 C_o$. Excessive axial load can lead to a reduction in bearing service life.

Equivalent bearing loads

Equivalent bearing loads for SKF stainless steel deep groove ball bearings can be calculated the same way as for standard SKF deep groove ball bearings. For additional information, contact the SKF application engineering service.

Designations

The designations for SKF stainless steel deep groove ball bearings follow the basic SKF designation system except for inch types. However, the prefix "W" has been implemented to indicate that the material is stainless steel.

Supplementary designations

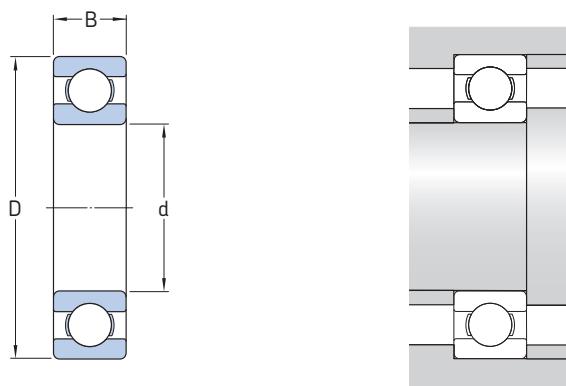

In addition to the designation suffixes that are listed in the *SKF rolling bearings catalogue*, the following designation suffixes are relevant for SKF stainless steel deep groove ball bearings:

- W** Stainless steel deep groove ball bearing metric series
- D/W** Stainless steel deep groove ball bearing inch series
- X** One boundary dimension deviates from ISO standard
- BB1** Two or more boundary dimensions deviate from ISO standard
- 2TS** PTFE seal for stainless steel deep groove ball bearing
- 2ZS** Shield of pressed sheet steel on both sides of the bearing with retaining ring
- R** Flanged outer ring
- R-2Z** Shield of pressed sheet steel on both sides of the bearing and flanged outer ring
- VT378** Food grade grease with aluminium thickener of consistency 2 to the NLGI Scale for a temperature range -25 to +120 °C (normal fill grade)
- VP311** SKF Food line stainless steel deep groove ball bearing: Blue colored seal made of synthetic rubber in line with the respective US Food and Drug Administration (FDA) recommendations (FDA 21 CFR section 177.2600 'Rubber articles intended for repeated use' in food manufacture, preparation and transportation including aqueous and fatty foods) and lubricant registered by NSF as category H1.

For additional information, refer to the *SKF rolling bearings catalogue* or the *SKF Interactive Engineering Catalogue* available online at www.skf.com.
