

MAG-LED™ Technology

MAG-TAC™ LED

PLAIN BEZEL

DESCRIPTION

The MAG-TAC™ LED is a true tactical torch, specifically designed for professional users but also available to civilians. An aggressive knurled design allows for a secure grip and the body has twice the impact resistance of a standard Maglite® torch. The MAG-TAC™ uses lithium CR123 batteries for superior performance. The tail cap is shrouded to avoid accidental activation, and the body has a matte finish.

This patrol version of the MAG-TAC™ has been designed with extensive input from police officers, and has been tested and recommended by the National Tactical Officers Association. In addition to its standard features, it has a smooth bezel and features a power save mode to give extended battery life. It comes with CR123 batteries and a pocket clip.
