1x 12x by 12y Touchpad (75608)
1x ATMXT144U-DEV-PCB (10938)
1x Touchpad Acrylic Cover
4x Self Adhesive Feet (HW1009)
1x 50W FPC Cable (CAB1025)
1x USB Cable (CAB0019)

Using the Evaluation Kit

This kit (ATEVK-MXT144U-A) is for the evaluation and development of Microchip maXTouch™ applications using the mXT144U Integrated Circuit (IC).

A set of self-adhesive feet have been supplied with the kit to allow for the touchscreen assembly to be used on the desk or bench.

Evaluation Software

A PC application: maXTouch Studio LITE is required to facilitate evaluation of the product.

<https://www.microchip.com/maxtouch>

The LITE version of the tool allows viewing of messages and objects and loading of the configuration files. To tune and change objects, a full version of the tool is available for download also. Please contact your local Microchip representative for details.

- Install the software for maXTouch Studio LITE.
- Connect the supplied USB cable to the ATMXT144U-DEV-PCB and to any available USB port.

Object Explorer

The maXTouch Studio application via the Object Explorer allows for various operating parameters to be configured. The Object Explorer is also the means by which different configurations, such as touch keys or touchscreen format can be loaded into the mXT144U device. The explorer only displays the objects present in the connected device.

Before making changes to individual parameters, it is advisable to save the current default settings.

- This can be done from the Save Config option in the Configuration menu in the maXTouch Studio toolbar. Save this default config onto your desktop or a USB key.
- To change a parameter, click on the object you wish to alter (e.g. Multiple Touch Touchscreen T100).
- After changing any parameters, click on the Write button of the active window to apply the new settings.

NOTE: Settings will revert to their defaults when you unplug and re-plug the USB cable unless you click on the Backup button in the Device menu on maXTouch Studio LITE toolbar.

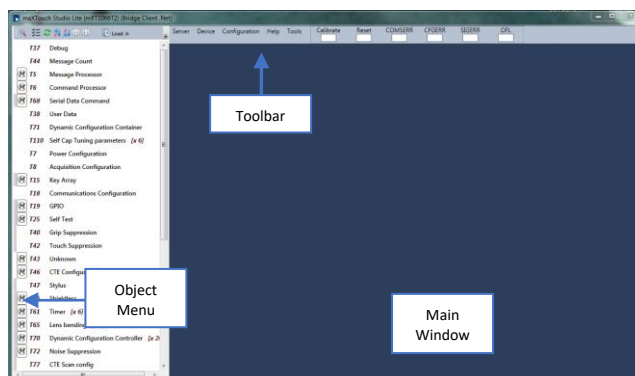

- To view touches graphically use Touch Reporter in the Tools menu in the toolbar.

Restoring Factory Configuration

If required, the unit may be set back to factory default settings. This may be of use if settings have been changed, and the unit is no longer functioning as intended.

- Run the maXTouch Studio LITE application and select Configuration from the toolbar.
- Select Zero Config and then Load Config.
- From the Open dialog box, navigate to the Default Configuration File you previous saved and load the xcfg file.
- Once the file is loaded, click on the Device menu on the maXTouch Studio.
- Select Backup then select Reset. The default factory settings are now set.

Additional Information

More information about this product is available in the data sheet and user guide.

The product documentation zip file and enc file can be found online, more information about maXTouch Studio is also available, please contact your Microchip representative.
