Product Description

This module is suitable for applications requiring SIL 3 level in safety related systems for high-risk industries. The unit can be configured for switches or proximity detectors, located in Hazardous Area, and repeats the input state to a relay contact in Safe Area. The selectable fault detection circuit is available for proximity sensors or switches equipped with end of line resistors. The second output can be configured to repeat the second input, to duplicate the first input or to report the first input fault. If needed, the output can also be inverted.
