

## TEST REPORT

UN ST/SG/AC.10/11/Rev.6, Amendment 1

### RECOMMENDATIONS ON THE TRANSPORT OF DANGEROUS GOODS MANUAL OF TESTS AND CRITERIA, PART III, SECTION 38.3 LITHIUM METAL AND LITHIUM ION BATTERIES

**Report Number** .....: 20PP132-01\_0

Date of issue .....: 2020-03-26

Total number of pages .....: 47

**Tested by** .....: Nadiya Trushnikova

(printed name and signature) .....

**Approved by** .....: Peter Hanses

(printed name and signature) .....

**Testing Laboratory** .....: Kiwa Primara GmbH

Address .....: Gewerbestraße 28, 87600 Kaufbeuren; Germany

**Applicant's name** .....: Aaronia AG

Address .....: Gewerbegebiet Aaronia AG II  
54597 Strickscheid  
Germany

#### Test specification:

Standard .....: UN ST/SG/AC.10/11/Rev.6 Amendment 1

Recommendations on the TRANSPORT OF DANGEROUS  
GOODS

MANUAL OF TESTS AND CRITERIA, PART III, SECTION 38.3  
LITHIUM METAL AND LITHIUM ION BATTERIES

Test procedure .....: Transportation test

Non-standard test method .....: -

**Test item description** .....: Polymer Lithium-Ion single cells and Battery Pack

Trade Mark .....: Aaronia AG

Manufacturer .....: Aaronia AG

Model/Type reference .....: LiPO

Date of receipt .....: 2020-02-21

Result .....: All performed tests were successfully passed

Cells are considered as the component of the battery and to be  
transported only assembled into the battery pack.

Executing test laboratory:

Specimens received on:

Total test duration:

## 2. Description of specimens

### 2.1 Technical data

Designation of specimens:	Polymer Lithium-Ion single cells and Battery Pack
Manufacturer:	Aaronia AG
Configuration and cell type:	2 cells PL423450
Nominal capacity:	800 mAh
Nominal voltage:	7,4 V
Discharge end voltage:	6,0 V
Dimensions:	51,9 x 34,5 x7,9 mm
Weight:	27,8 g
Software status (if committed):	N/A
Hardware status (if committed):	Aaronia 800mAh LiPo Generation 2

## 2.2 Pictures of delivery state

Figure 1: Delivery state – front side

## 3. Testing

### 3.1 Specifications

#### **UN Manual of Tests and Criteria, Part III; Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)**

All rechargeable battery types, including those composed of previously tested cells, shall be subjected to tests T.1 to T.5 and T.7. The cells are subjected to tests T.1-T.5, T.6, T.8.

Tests T.1 to T.5 shall be conducted in sequence on the same battery. Test T.7 may be conducted using undamaged batteries previously used in tests T.1 to T.5 for purposes of testing on cycled batteries. Test T.6 is conducted on charged and cycled batteries with 50% charged state. Test T.8 is conducted on discharged and discharged batteries which have been additionally cycled before.

As the gross weight of the battery type is not more than 12 kg, it is considered as a small battery.

When testing rechargeable batteries under tests T.1 to T.5 and T.7, four small batteries at first cycle, in fully charged states, and four small batteries after 50 cycles ending in fully charged states shall be tested.

The whole procedure of conditioning batteries is described below.

### 3.2 Test matrix

The following test matrix provides an overview which specimen was part of which partial test.

Partial test	Test sample no.
T.1 Altitude simulation	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)
T.2 Thermal test	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)
T.3 Vibration	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)
T.4 Shock	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)
T.5 External short circuit	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)
T.6 Impact	A, N, C, D, E, AW, AR, AQ, AP, AK (cells)
T.7 Overcharge	K, H, J, N, AL, AF, AG, AE (batteries)
T.8 Forced Discharge	I1, L1, K1, B1, J1, I2, L2, K2, B2, J2, AE1, AG1, AF1, AL1,

	AI1, AE2, AG2, AF2, AL2, AI2 (cells)
--	---

Legend:

X - part of partial test, result passed   X - part of partial test, result failed

O - part of partial test, result has to be evaluated by the customer 3.3 Conditioning

Methods of measurement according to:				
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)				
Purpose of test:				
When a cell or battery type is to be tested under the following sub-sections, the cell or battery has to be conditioned.				
Test procedure:				
Sample no.	Number of cycles	State of charge after conditioning	Used test equipment

### 3.4 T.1 Altitude simulation

Method of measurement according to:
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)
Purpose of test:
This test simulates air transport under low pressure conditions.

Test procedure:						
Absolutely atmospheric pressure:	Less than 11.6 kPa					
Temperature:	20±5°C					
Test duration:	6 h					
Samples under test:	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)					
Used test equipment:						
Digital Multimeter						
Type:	175	Ser. No.:	23450683			
Manufacturer:	Fluke	Inv. No.:	167			
Last calibration:	11.09.2019

### 3.5 T.2 Thermal test

Method of measurement according to:
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)
Purpose of test:
This test assesses cell and battery seal integrity and internal electrical connections. The test is conducted using rapid and extreme temperature changes.
Test procedure:
Temperature min.: -40±2°C
Temperature max.: +72±2 °C

Maximum test interval between test temperature extremes:	0.5 h					
Storage time at each temperature:	6h					
Number of cycles:	10					
Devices under test:	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)					
<hr/>						
<b>Used test equipment:</b>						
Climatic chamber

## Test Parameter

### 3.6 T.3 Vibration

Method of measurement according to:						
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)						
Purpose of test:						
This test simulates vibration during transport.						
Test procedure (UN8.3):						
Wave form.:	Sinusoidal					
Logarithmic frequency sweep.:	Frequency:		Peak acceleration/amplitude:			
	7 Hz-18 Hz		1g <sub>n</sub>			
	18 Hz-50 Hz		0,8 mm			
	50 Hz – 200 Hz		8g <sub>n</sub>			
Number of sweeps per axis: (7 Hz – 200 Hz – 7 Hz)	12					
Number of axis to be tested:	3 mutually perpendicular mounting positions of the cell (one should be perpendicular to the terminal face).					
Temperature:	20±2°C					
Test time each axis:	3 h					
Total test duration:	9 h per sample					
Devices under test:	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)					
Used test equipment:						
Shaker system

## Test Parameter

### 3.7 T.4 Shock

Method of measurement according to:						
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)						
Purpose of test:						
This test simulates possible impacts during transport.						
Test procedure:						
Wave form.:	Half-sine					
Peak acceleration:	150gn (small batteries)/ 50gn (large batteries)					
Pulse duration:	6 ms (small batteries) / 11ms *large batteries)					
Number of shocks per half-axis:	3					
Number of axis to be tested:	6 half-axes (3 in the positive direction and 3 in the negative direction)					
Total number of shocks:	18					
Temperature:	20±2°C					
Devices under test:	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)					
Used test equipment:						
Acceleration sensor						
Type:	M352C65	Serial no.:	LW246420			
Manufacturer:	PCB SYNOTECH	Inventory no.	714

## Test Parameter

### 3.8 T.5 External short circuit

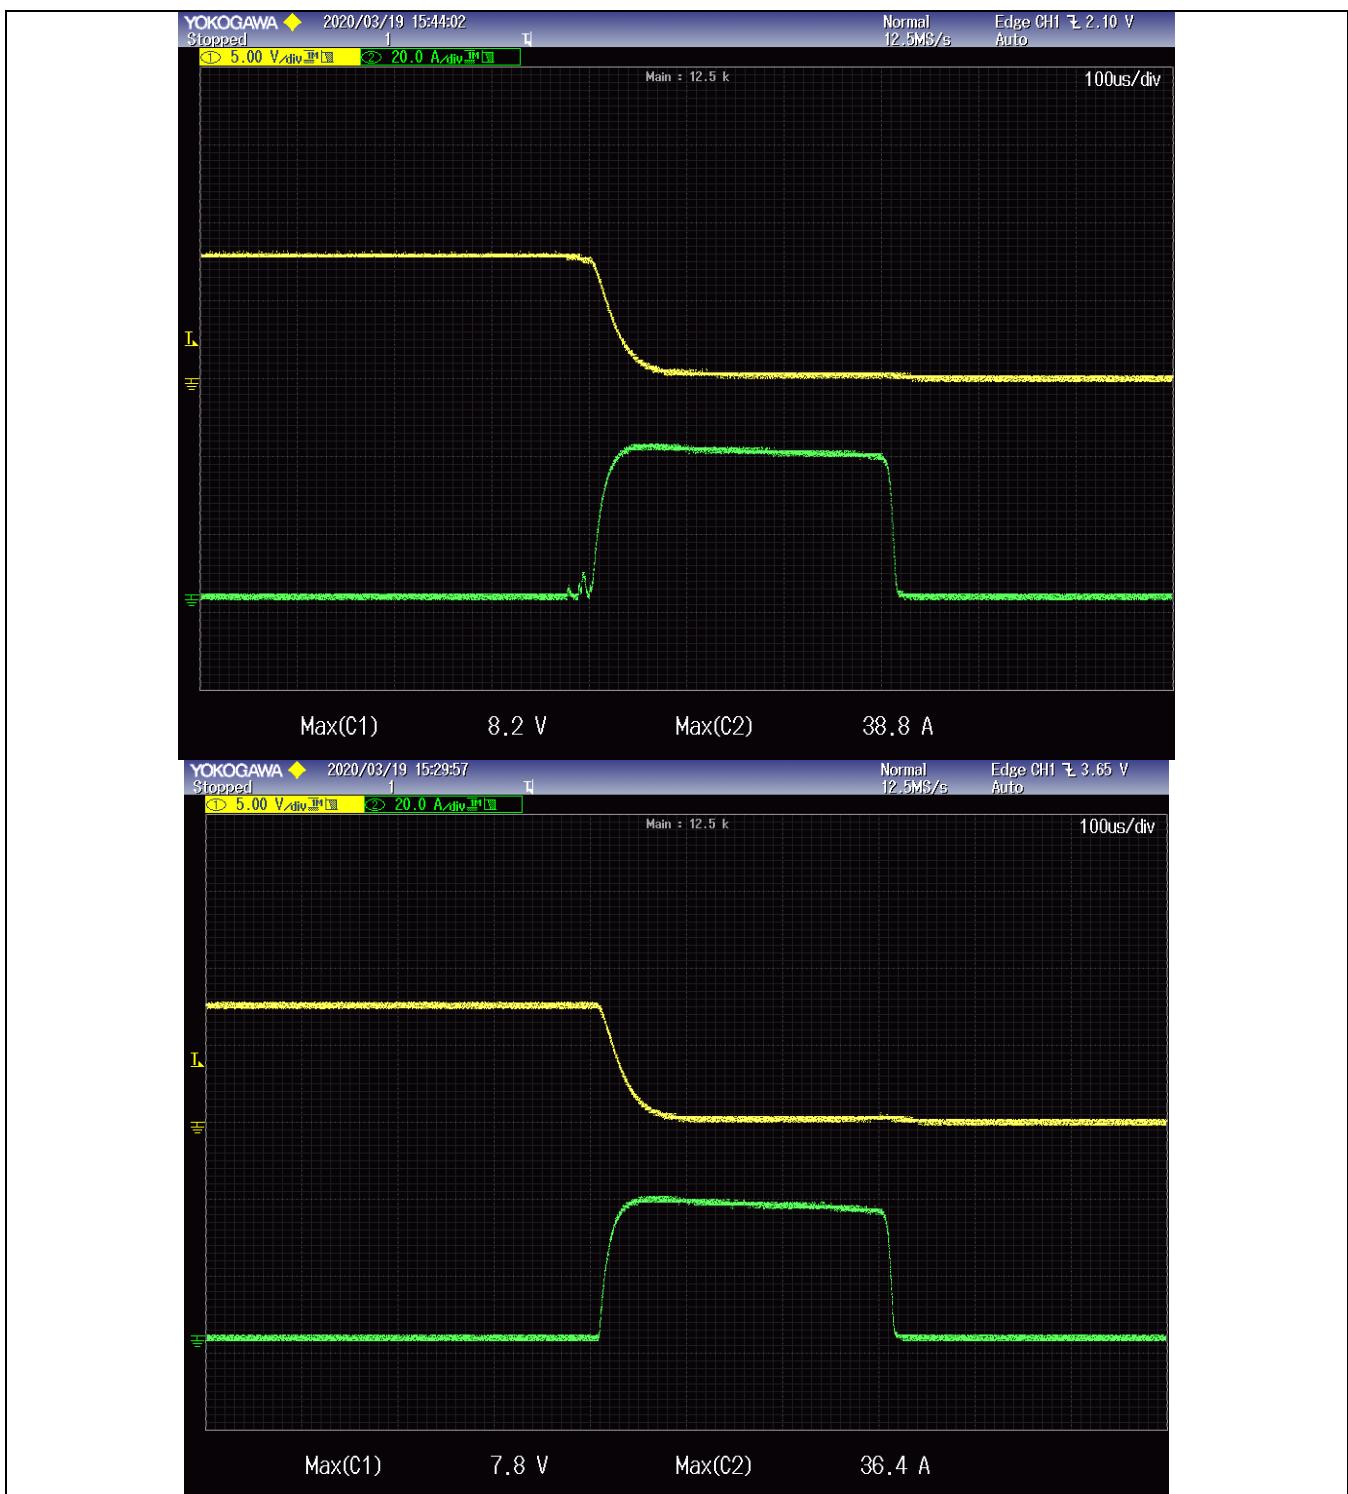

Method of measurement according to:						
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)						
Purpose of test:						
This test simulates an external short circuit.						
Test procedure:						
Temperature:	$55 \pm 2 \text{ }^{\circ}\text{C}$					
Total external resistance:	$80 \pm 20 \text{ m}\Omega (<0,1\Omega)$					
Testing duration:	1 h (batteries), 1h 44 min (cells)					
Observation time:	6 h					
Devices under test:	AV, V, W, AC, Y, AU, AB, X, P, U (batteries and cells)					
Used test equipment:						
Climatic Chamber						
Type:	WK3-340/40	Serial no.:	58226103910010			
Manufacturer:	Weiss Umwelttechnik	Inventory no.	094			
Last calibration:	09.04.2019					
Oscilloscope						
Type:	Oscilloscope	Ser. No:	91N714444			
Manufacturer:	Yokogawa	Inv. No:	200			
Last calibration:	11.02.2020					
Multiplexer for Thermocouples Type K						
Type:	7700	Serial no.:	1389431			
Manufacturer:	Keithley	Inventory no.	148			
Last calibration:	31.01.2020					
Thermocouple type K						
Type:	TT-KI-30-SLE-300M-DAkkS-T6	Serial no.:	N/A			
Manufacturer:	OMEGA Engineering inc	Inventory no.	643			
Last calibration:	09.03.2020					
Digital Multimeter / Datalogger (Temp.)						
Type:	2701	Serial no.:	1400850			

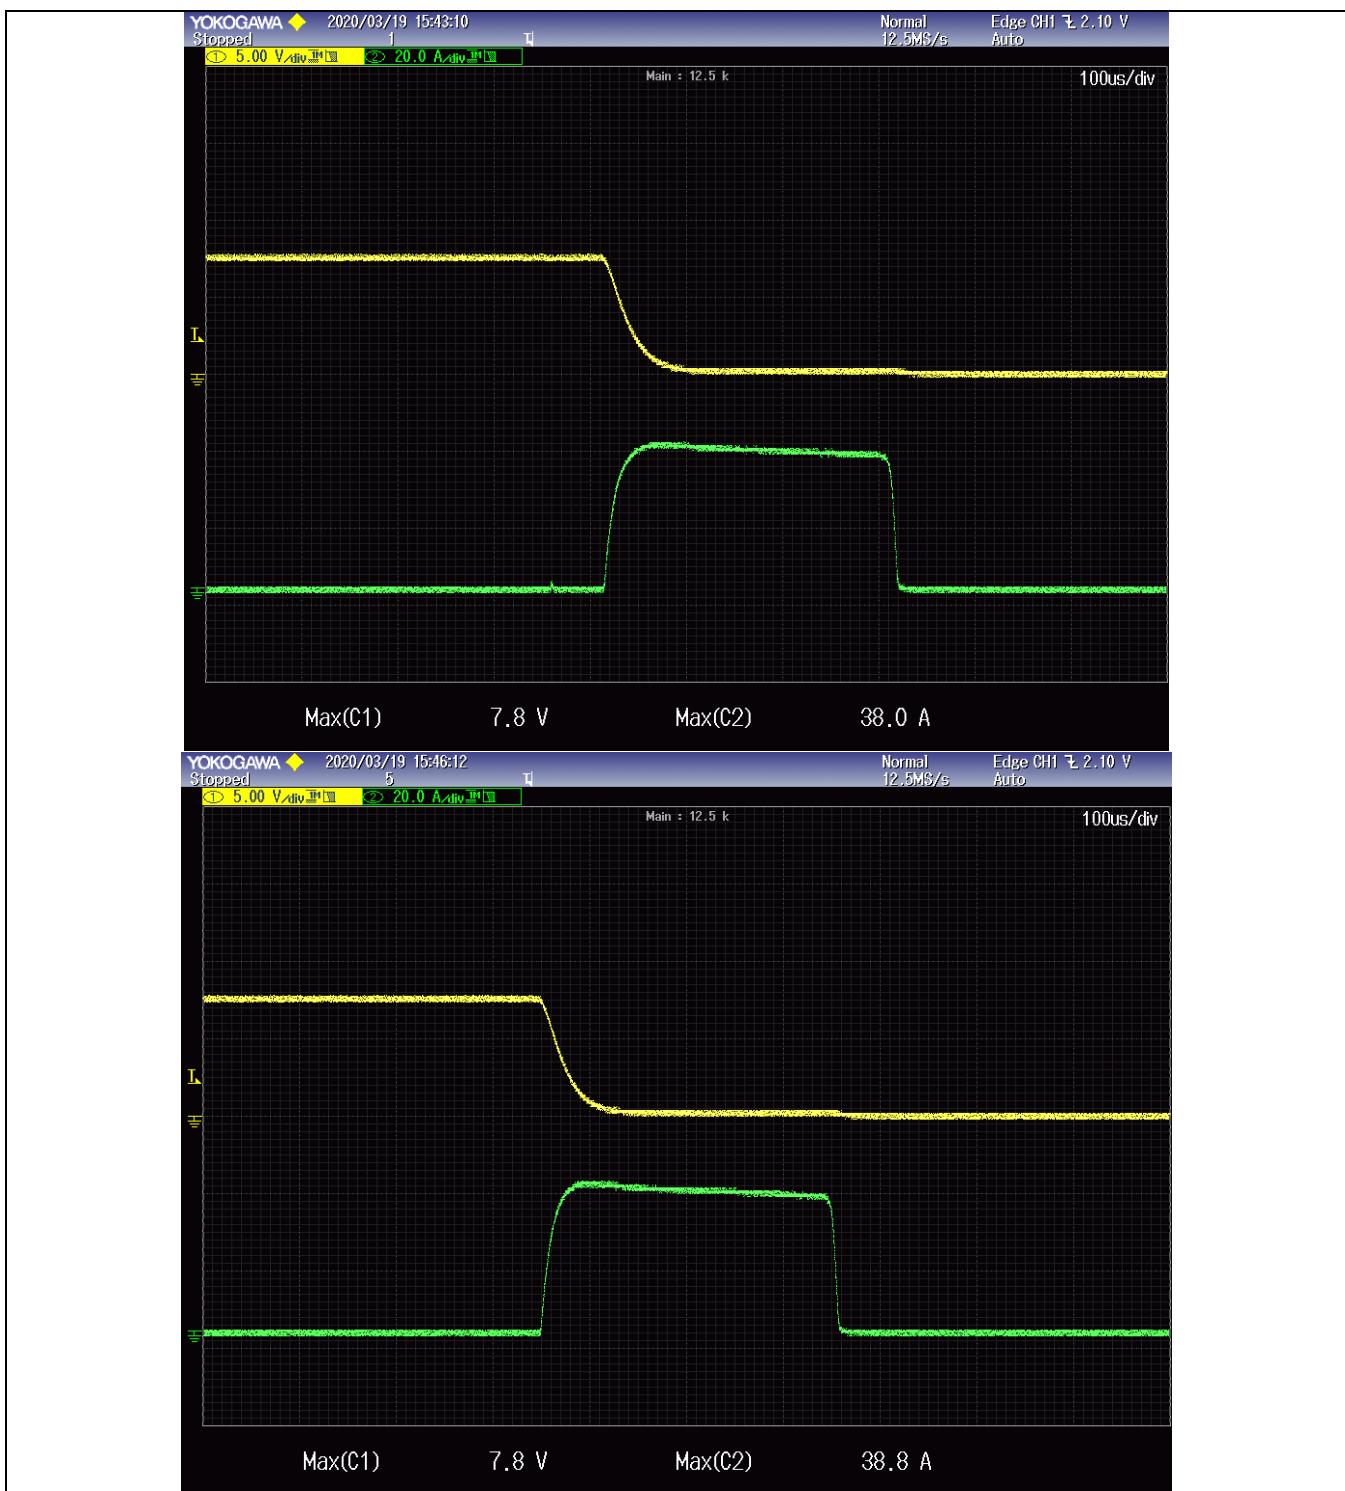

Manufacturer:	Keithley	Inventory no.	147
Last calibration:	31.01.2020		
Test result:			
Test requirements	<input checked="" type="checkbox"/> pass	<input type="checkbox"/> fail	<input type="checkbox"/> applied
Comment(s):			
Testing conducted:			
Person in charge:	Nadiya Trushnikova	Date:	2020-03-19

### 3.9 T.6 Impact/Crush

Method of measurement according to:						
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)						
Purpose of test:						
This test evaluates the ability of a rechargeable cell to withstand mechanical abuse from an impact or crush.						
Test procedure:						
Test applied:	Crush					
Applied force:	13		kN			
Speed:	1,5		cm/s			
Temperature:	20±2°C					
Testing duration:	1 crush					
Observation time:	6 h					
Devices under test:	A, N, C, D, E, AW, AR, AQ, AP, AK (20 cells)					
Test stop:	Applied forces reached 13 kN					
Used test equipment:						
Digital caliper						
Type:	3011XL	Ser. No:	GX16072817			
Manufacturer:	Messmittelonline	Inv. No:	618			
Last calibration:	04.04.2019					
Type:	175	Ser. No:	23450683			
Manufacturer:	Fluke	Inv. No:	167			
Last calibration:	11.09.2019					
Test result:						
Test requirements	<input checked="" type="checkbox"/> pass	<input type="checkbox"/> fail	<input type="checkbox"/> applied

### 3.10 T.7 Overcharge

Method of measurement according to:						
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)						
Purpose of test:						
This test evaluates the ability of a rechargeable battery to withstand an overcharge condition.						
Test procedure:						
Charge current:	1.3		A			
Charge Voltage:	16.8		V			
Temperature:	20±2°C					
Testing duration:	24 h					
Observation time:	7 days					
Devices under test:	K, H, J, N, AL, AF, AG, AE (batteries)					
Used test equipment:						
Multiplexer for Thermocouples Type K						
Type:	7700	Serial no.:	1389431			
Manufacturer:	Keithley	Inventory no.	148			
Last calibration:	31.01.2020					
Digital Multimeter						
Type:	175	Ser. No:	23450683			
Manufacturer:	Fluke	Inv. No:	167			
Last calibration:	11.09.2019					
Digital Multimeter / Datalogger (Temp.)						
Type:	2701	Serial no.:	1400850			
Manufacturer:	Keithley	Inventory no.	147			
Last calibration:	31.01.2020					
DC Power Supply						
Type:	DC Power Supply	Ser. No:	1542492			
Manufacturer:	MC Power	Inv. No:	015			
Last calibration:	N/A					
Digital Multimeter with power and energy measurement						
Type:	Metrahit Energy	Ser. No:	See above			

Manufacturer:	GMC-I Messtechnik GmbH	Inv. No:	099
Last calibration:	07.06.2019		
Thermocouple type K			
Type:	TT-KI-30-SLE-300M- DAkkS-T6	Serial no.:	N/A
Manufacturer:	OMEGA Engineering inc	Inventory no.	643
Last calibration:	09.03.2020		
Power Analyzer			
Type:	LMG450	Serial no.:	08861008
Manufacturer:	ZES Zimmer	Inventory no.	274
Last calibration:	25.02.2020		
Test result:			
Test requirements	<input checked="" type="checkbox"/> pass	<input type="checkbox"/> fail	<input type="checkbox"/> applied
Comment(s):			
Testing conducted:			
Person in charge:	Nadiya Trushnikova	Date:	2020-03-20

Test protocol:

Figure 43: Overcharge – test protocol

Sample No.	No. of cycles/state	Test results		
		No disassembly	No fire	Result
K	Cycled	No	No	Passed
H	Cycled	No	No	Passed
J	Cycled	No	No	Passed
N	Cycled	No	No	Passed
AL	Charged	No	No	Passed
AF	Charged	No	No	Passed
AG	Charged	No	No	Passed
AE	Charged	No	No	Passed
Charge current (A)	1.30			
Charge Voltage(V)	16.8			

### 3.11 T.8 Forced discharge

Method of measurement according to:			
UN Manual of Tests and Criteria, Part III, Section 38.3, Lithium metal and lithium ion batteries (UN ST/SG/AC.10/11/Rev.6, Amendment 1)			
Purpose of test:			
This test evaluates the ability of a rechargeable cell to withstand a forced discharge condition.			
Test procedure:			
Charge current:	650	mA	
Charge Voltage:	12	V	
Temperature:	20±2°C		
Testing duration:	1 h		
Observation time:	7 days		
Devices under test:	I1, L1, K1, B1, J1, I2, L2, K2, B2, J2 AE1, AG1, AF1, AL1, AI1, AE2, AG2, AF2, AL2, AI2		
Used test equipment:			
DC power supply			
Type:	DC Power Supply	Ser. No:	1542492
Manufacturer:	MC Power	Inv. No:	015
Last calibration:	N/A		
Digital Multimeter with power and energy measurement			
Type:	Metrahit Energy	Ser. No:	See above
Manufacturer:	GMC-I Messtechnik GmbH	Inv. No:	099
Last calibration:	07.06.2019		
Test result:			
Test requirements	<input checked="" type="checkbox"/> pass	<input type="checkbox"/> fail	<input type="checkbox"/> applied
Comment(s):			
Testing conducted:

## 4. Summary

<b>Lithium cell or battery test summary in accordance with sub/section 38.3 of Manual of Tests and Criteria</b>	
<b>Test item description</b>	
Unit	Polymer Lithium-Ion single cells and Battery Pack
Trademark	Aaronia AG
Manufacturer	Aaronia AG
Model/Type reference	LiPO
<b>Manufacturer</b>	
Manufacturer's name	Aaronia AG
Address	Gewerbegebiet Aaronia AG II, 54597 Strickscheid, Germany
Phone number	+49 6556 9019 355
E-mail address	mail@aaronia.de
Website	<a href="https://aaronia.de/">https://aaronia.de/</a>
<b>Testing laboratory</b>	
Name	Kiwa Primara GmbH
Address	Gewerbestraße 28, 87600 Kaufbeuren; Germany
Phone number	+49 (0)40 / 30 39 49 - 60
E-mail address	info@kiwa.de
Website	<a href="https://www.kiwa.com/de/de/uber-kiwa/tochterfirmen/kiwa-primara-gmbh/primara/">https://www.kiwa.com/de/de/uber-kiwa/tochterfirmen/kiwa-primara-gmbh/primara/</a>
<b>Test report</b>	
Number	20PP132-01_0
Date of issue	2020-03-26
<b>Battery description</b>	
Type	Polymer Lithium-Ion single cells and Battery Pack
Mass (battery)	27,8 g
Energy (battery)	800 mAh
Physical description (battery)	Solid 51,9 x 34,5 x7,9 mm
Model name (battery)	LiPO
<b>Test result</b>	
All performed tests were successfully passed. Cells are considered as the component of the battery and to be transported only assembled into the battery pack.	

<b>Tests and criteria</b>	<b>Requirement</b>	<b>Verdict</b>
T.1 Altitude simulation	Cells and batteries meet this requirement if there is no mass loss, no leakage, no venting, no disassembly, no rupture and no fire and if the open circuit voltage of	Passed
T.2 Thermal test		Passed

T.3 Vibration	each test cell or battery after testing is not less than 90% of its voltage immediately prior to this procedure. The requirement relating to voltage is not applicable to test cells and batteries at fully discharged states.	Passed
T.4 Shock		Passed
T.5 External short circuit	Cells and batteries meet this requirement if their external temperature does not exceed 170°C and there is no disassembly, no rupture and no fire during the test and within six hours after test.	Passed
T.6 Impact	Cells and component cells meet this requirement if their external temperature does not exceed 170°C and there is no disassembly and no fire within six hours of this test.	Passed
T.7 Overcharge	Rechargeable batteries meet this requirement if there is no disassembly and no fire during the test and within seven days of this test.	Passed
T.8: Forced discharge	Primary or rechargeable cells meet this requirement if there is no disassembly and no fire within seven days of this test.	Passed
