description

The emergency stop pushbuttons comply with IEC 60 204, IEC 60 073, IEC 60 947 and VDE 0113 Part 1. They are protected against unauthorized actuation by a positively guided mechanical movement sequence in accordance with DIN EN ISO 13850. To protect against accidental actuation, a pressure point must be overcome and the pushbutton engages in the pressed position. Due to the shape of the actuating element, the emergency stop pushbutton is protected against blocking. This means that an initiated emergency stop procedure cannot be interrupted by jamming objects. See appendix for original operating instructions.

The compact LUMOTAST 22 emergency stop with quick-connect terminals is ideal wherever an emergency stop or emergency off is required and space is tight in front of or behind the front panel. This emergency stop is also available with a PCB terminal, see RAFIX 22 FS+ control component range.
