

Expand 19 Click

PID: MIKROE-6400

Expand 19 Click is an add-on board that provides additional input/output capabilities for various applications. This board features the TCAL9538, an 8-bit I2C-bus I/O expander from Texas Instruments. The board features eight configurable I/O pins that can be set as inputs or outputs, with polarity inversion, programmable output drive strength, and interrupt functionality for real-time event handling. It operates using a standard 2-wire I2C communication interface, supporting clock frequencies up to 1MHz, and includes an onboard interrupt pin for efficient system integration. The board supports the innovative "Click Snap" feature, allowing the sensor area to be detached for flexible positioning. Expand 19 Click is ideal for systems requiring additional I/O control, such as managing sensors, switches, and LEDs.

How does it work?

Expand 19 Click is based on the TCAL9538, an 8-bit I2C-bus I/O expander from Texas Instruments. This Click board™ provides a simple solution for applications that require additional input/output lines, such as controlling switches, sensors, push-buttons, LEDs, and more. Operating at 3.3V, the TCAL9538 allows easy integration into existing systems using the standard two-wire I2C communication protocol. At its core, the TCAL9538 features 8-bit data registers that enable users to configure the I/O pins as inputs or outputs. Upon power-up or a software reset, all I/Os are set as inputs by default. However, they can be reconfigured by the host microcontroller through the Configuration registers. The data for each pin is stored in dedicated Input Port or Output Port registers, which are accessible for reading by the host MCU. Additionally, the polarity of the Input Port can be adjusted via the Polarity Inversion register, offering flexibility in design and signal interpretation.

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

This Click board™ is designed in a unique format supporting the newly introduced MIKROE feature called "Click Snap." Unlike the standardized version of Click boards, this feature allows the main sensor area to become movable by breaking the PCB, opening up many new possibilities for implementation. Thanks to the Snap feature, the TCAL9538 can operate autonomously by accessing its signals directly on the pins marked 1-8. Additionally, the Snap part includes a specified and fixed screw hole position, enabling users to secure the Snap board in their desired location.

One of the key features of the TCAL9538 is its Agile I/O functionality, which enhances the performance of the I/O ports. This includes configurable output drive strength, programmable pull-up and pull-down resistors, latchable inputs, and maskable interrupts. The device also offers programmable open-drain or push-pull output modes, making it adaptable to various application requirements. These Agile I/O features provide the flexibility to optimize your design for power consumption, speed, and electromagnetic interference (EMI).

Expand 19 Click uses an I2C interface with clock speeds of up to 1MHz, ensuring fast and efficient communication with the host MCU. The I2C address can be easily configured via onboard jumpers, allowing multiple devices to coexist on the same bus. Additionally, the board features an interrupt (INT) pin triggered whenever there is a change in the state of any input port, ensuring real-time response to external events, and a reset (RST) pin for power cycling to return the device to its default state. This ensures reliable operation and easy recovery in case of unexpected issues.

This Click board™ can be operated only with a 3.3V logic voltage level. The board must perform appropriate logic voltage level conversion before using MCUs with different logic levels. Also, it comes equipped with a library containing functions and an example code that can be used as a reference for further development.

Click Snap

Click Snap is an innovative feature of our standardized Click add-on boards, introducing a new level of flexibility and ease of use. This feature allows for easy detachment of the main sensor area by simply snapping the PCB along designated lines, enabling various implementation possibilities. For detailed information about Click Snap, please visit the [official page](#) dedicated to this feature.

Specifications

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

Type	Port expander
Applications	Ideal for systems requiring additional I/O control, such as managing sensors, switches, and LEDs
On-board modules	TCAL9538 - 8-bit I2C-bus I/O expander from Texas Instruments
Key Features	8 configurable I/O pins (input or output), polarity inversion for input pins, programmable output drive strength and pull-up/pull-down resistors, agile I/O features including latchable inputs and maskable interrupts, interrupt and reset feature, and more
Interface	I2C
Feature	Click Snap, ClickID
Compatibility	mikroBUS™
Click board size	M (42.9 x 25.4 mm)
Input Voltage	3.3V

Pinout diagram

This table shows how the pinout on Expand 19 Click corresponds to the pinout on the mikroBUS™ socket (the latter shown in the two middle columns).

Notes	Pin					Pin	Notes
	NC	1	AN	PWM	16	NC	
Reset	RST	2	RST	INT	15	INT	Interrupt
ID COMM	CS	3	CS	RX	14	NC	
	NC	4	SCK	TX	13	NC	
	NC	5	MISO	SCL	12	SCL	I2C Clock
	NC	6	MOSI	SDA	11	SDA	I2C Data
Power Supply	3.3V	7	3.3V	5V	10	NC	
Ground	GND	8	GND	GND	9	GND	Ground

Onboard settings and indicators

Label	Name	Default	Description
LD1	PWR	-	Power LED Indicator
JP1-JP2	ADDR SEL	Right	I2C Address Selection 0/1: Left position 0, Right position 1

Software Support

We provide a library for the Expand 19 Click as well as a demo application (example), developed using MIKROE [compilers](#). The demo can run on all the main MIKROE [development boards](#).

Package can be downloaded/installed directly from NECTO Studio Package Manager (recommended), downloaded from our [LibStock™](#) or found on [MIKROE github account](#).

Library Description

This library contains API for Expand 19 Click driver.

Key functions

- `expand19_set_pin_direction` This function sets the direction of the selected pins.
- `expand19_set_all_pins_value` This function sets the value of all output pins.
- `expand19_read_port_value` This function reads the value of all input pins.

Example Description

This example demonstrates the use of Expand 19 Click by setting and reading the port state.

The full application code, and ready to use projects can be installed directly from NECTO Studio Package Manager (recommended), downloaded from our [LibStock™](#) or found on [MIKROE github account](#).

Other MIKROE Libraries used in the example:

- MikroSDK.Board
- MikroSDK.Log
- Click.Expand19

Additional notes and informations

Depending on the development board you are using, you may need [USB UART click](#), [USB UART 2 Click](#) or [RS232 Click](#) to connect to your PC, for development systems with no UART to USB interface available on the board. UART terminal is available in all MIKROE [compilers](#).

mikroSDK

This Click board™ is supported with [mikroSDK](#) - MIKROE Software Development Kit. To ensure proper operation of mikroSDK compliant Click board™ demo applications, mikroSDK should be downloaded from the [LibStock](#) and installed for the compiler you are using.

For more information about mikroSDK, visit the [official page](#).
