ERSA RDS80 control station /230

ERSA RDS 80 Soldering Station: A powerful soldering station with microprocessor control. The ERSA RDS 80 soldering station is processor-controlled and, in addition to the direct selection of 3 programmable temperatures, offers other useful features such as standby and auto power-off functions, as well as a large, easy-to-read LCD display. The powerful PTC heating element of the RT 80 soldering iron (up to 290 W heating power) guarantees that the target temperature is reached quickly with sufficient power reserve. Thanks to the wide selection of ERSADUR soldering tips from the 832 and 842 series, the ERSA RDS 80 can handle almost all soldering tasks in the semi-professional sector. The station consists of an electronics station (ORDS803), the RT80 soldering iron (0890CDJ), and the stand (A39).
