Allowable Lateral Load

Make sure to operate strictly within the allowable lateral load range to the rod end.

Operation outside of this range may result in shorter service life or damage to the device.

Allowable Kinetic Energy

Make sure to operate strictly within the allowable range of the load weight and maximum speed.

Operation outside of this range may cause excessive impact, which may result in the damage to the device.

Operating pressure: 1 MPa

* Refer to Model Selection in Best Pneumatics catalogue for details about model selection procedure.

Series C55

Mounting of Auto Switch

To mount auto switches, follow the instruction illustrated below.

∅20 to ∅63/Direct mounting

- Use a watchmakers' screwdriver with a handle 5 to 6 mm in diameter when tightening the auto switch mounting screw.
Tightening torque should be set 0.10 to 0.20 N·m.

Series C55

Lead Wire Length

Lead wire length indication

(Example) D-M9P **L**

Lead wire length

Nil	0.5 m
L	3 m
Z	5 m

- Note 1) Applicable auto switch with 5 m lead wire "Z"
Solid state switch: Manufactured upon receipt of order as standard.
- Note 2) The standard lead wire length of solid state switch with water resistant 2-colour indication type is 3 meters. (Not available 0.5 m)
- Note 3) To designate solid state switches with flexible specifications, add "-61" after the lead wire length.

(Example) D-M9NWL-**61**

Flexible specification

Note) D-M9□(V) series use flexible lead wire as standard.

Auto Switch Hysteresis

The hysteresis is the difference between the position of the auto switch as it turns "on" and as it turns "off". A part of operating range (one side) includes this hysteresis.

Contact Protection Boxes: CD-P11, CD-P12

<Applicable switch model>

D-A9/A9□V

The above auto switches do not have internal contact protection circuit.

1. Operating load is an inductive load.
 2. The length of wiring to the load is 5 m or more.
 3. The load voltage is 100 VAC.
- The contact life may be shortened. (Due to permanent energising conditions.)

Specifications

Part No.	CD-P11		CD-P12
Load voltage	100 VAC	200 VAC	24 VDC
Maximum load current	25 mA	12.5 mA	50 mA

* Lead wire length — Switch connection side 0.5 m
Load connection side 0.5 m

Connection

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 meter.

Auto Switches Connections and Examples

Basic Wiring

Solid state 3-wire, NPN

Solid state 3-wire, PNP

2-wire (Solid state)

2-wire (Reed switch)

(Power supplies for switch and load are separate.)

Examples of Connection to PLC (Programmable Logic Controller)

• Sink input specifications 3-wire, NPN

• Source input specifications 3-wire, PNP

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

2-wire

2-wire

Connection Examples for AND (Serial) and OR (Parallel)

• 3-wire

AND connection for NPN output (using relays)

AND connection for NPN output (performed with switches only)

OR connection for NPN output

The indicator lights will light up when both switches are turned ON.

2-wire with 2-switch AND connection

When two switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up if both of the switches are in the ON state.

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \text{Internal voltage drop} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 VDC.
Internal voltage drop in switch is 4 V.

2-wire with 2-switch OR connection

(Solid state)

When two switches are connected in parallel, a malfunction may occur because the load voltage will increase when in the OFF state.

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \\ &\quad \times \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 kΩ.
Leakage current from switch is 1 mA.

(Reed switch)

Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of switches in the ON state, the indicator lights may sometimes dim or not light because of the dispersion and reduction of the current flowing to the switches.

Reed Switch: Direct Mounting Style D-A90(V)/D-A93(V)/D-A96(V)

Grommet
Electrical entry direction: In-line

Caution

Operating Precautions

Fix the switch with appropriate screw installed on the switch body. If using other screws, switch may be damaged.

D-A96(V)

- Note) 1. Operating load is an induction load.
2. The length of wiring to the load is 5 m or more.
3. The load voltage is 100 VAC.
Use the contact protection box in any of the above listed situations.
The contact point life may be shortened. (Refer to page 12 for contact protection box.)
