

# USING FLIR<sup>®</sup> FX ON THE GO

The Versatility of FLIR FX Makes the Device Much More than a Security Camera

Although FLIR FX is primarily an easy-to-use and affordable home surveillance camera, it's also versatile with features and attachments for an array of applications, including outdoor security, home monitoring, sports documenting, vehicle dash recording and much more.

## Wi-Fi Hotspot

FX contains an internal Wi-Fi hotspot that creates a secure and direct connection without any Internet access. Record video directly to the camera microSD without being connected to the cloud. Take FX anywhere with the confidence you'll be able to access live video and configure camera settings via the FLIR FX App, regardless of Internet availability, up to 150 meters away from your iOS or Android control device.

## Wi-Fi Access and FLIR Cloud Through the FLIR FX App

Connect FX to your Wi-Fi network which enables "Cloud Mode" to live-stream the camera over the Internet from anywhere in the world. With the easy-to-use, cloud-enabled FLIR FX App, users can review RapidRecap clips remotely stored on FLIR Cloud, accessible from any iOS or Android devices. The FLIR FX app also lets users control multiple cameras simultaneously, create push notifications for specific events, monitor temperature, humidity and communicate via two-way audio.

## Share with Friends

Users can also create a separate password for connecting the camera to a new smartphone or tablet. This can be shared with friends, family and neighbors to let them view content and access your FLIR Cloud account.

## Flexible Design and Accessories

FX easily adapts to your needs with its flexible design. It is compatible with a collection of interchangeable camera and mounting stand accessories for a wide variety of applications beyond indoor use.

### INDOOR VERSION

With resolutions up to 1080p and a wide, dewarped 160° field of view, the FLIR FX can easily capture activity in an entire room, delivering HD image quality and the assurance that you'll never miss a thing. It also features IR LEDs that provide night vision up to 10 meters.

### OUTDOOR VERSION

With a rugged and weatherproof outdoor housing sold with or without the camera, the FLIR FX Outdoor Version is protected from the elements and shielded from excess sunlight. This housing also includes four commercial grade IR LEDs to facilitate more powerful night-vision capability up to 20 meters, keeping you informed, even in the dark.

### SPORT HOUSING

Sold separately, the sport housing is a protective acrylic shell that is waterproof up to 20 meters below the surface to keep up with the most extreme activities, from skydiving to scuba diving. It also features one-click sharing, so you can show off your adventures on social media.

### VEHICLE DASH MOUNT

The dashboard mount provides steady filming on the road, featuring an internal accelerometer that senses when a car is in motion and activates the 30-minute loop record function. The accelerometer also senses a 1.7g impact and creates a permanent recording that automatically saves the 10 seconds prior to contact.
