ERSA CHIP TOOL VARIO /24V 80W

Chip Tool VARIO: The Chip Tool VARIO desoldering tweezers are characterized by their powerful performance (2 x 40 W) and very compact design. This makes them ideally suited for performing the most delicate soldering work on very small SMD components. The pluggable heating element pairs can be precisely aligned on the handle and are quick and easy to replace. A switch allows you to change the self-closing to self-opening mode of this precision tool. Like the i-Tool and the i-Tool AIR, the Chip Tool VARIO features the proven and reliable motion sensor for activation from standby mode.
