

1464APD
Set for testing high pressure system in common rail diesel engines

Simplify diagnosis in common rail diesel engines with our case of adapters: the complete kit for accurate, reliable measurements.

The 2000 bar sensor and the many fittings available result in a comprehensive high-performance kit.

The supplied hoses allow connection between the high pressure pump and the injector flute, to test common rail system pressure.

If no pressure is available, the dummy regulators included in the kit make it possible to determine whether the problem lies in the high pressure pump or in the regulator.

 4,7 Kg

 510x415x130 mm -  4,7 kg

Supplied hose sizes:

- T12X12-M1.5
- T12x14-M1.5
- T12x16-M1.5
- T12-M1.5

Bosch, Delphi, Denso and Siemens pressure regulators
